§§3–4 'Number' in general as tantamount to Intellect is a simplification. Aristotle *de An.* 1.2 404b16–18 attributes to Plato the view that the soul knows its objects—'like by like'—because it is composed of the same ultimate principles. Immediately after, at *de An.* 1.2 404b22 (a reference to the *Περὶ φιλοσοφίας* we cannot check), he attributes to him and, presumably, other Platonists the idea that One stands for Intellect; A 1.7.21 at S 1.1.29b20 attributes this view to Xenocrates. The definitions of Plato and Xenocrates are also mentioned together at Aristotle *Top.* 6.3 140b2–3. The phrase ἀριθμὸν ἑαυτὸν κινεῖν in §3 is by implication attributed to Xenocrates in §4, which finds confirmation in frs. 96–99, 101–107 Isnardi-Parente² (e.g. Macrobius *in Somn.* 1.14.19 *Xenocrates numerum se moventem*). Note that Aristotle *de An.* 1.2 only alludes very briefly to the World Soul and human souls of the *Timaeus*, but does so at greater length in the next chapter, *de An.* 1.3 406b26–407a2, where he provides a remarkably succinct and precise account of the construction of the World Soul according to the 'harmonic numbers'. The soul moves the body because it is interwoven with it, and the revolutions of the heavens are the motions of the soul. That Aristotle (a bit surreptitiously) includes the human soul is clear from his verbatim quotation at 406b30 of the formula *Tim.* 42a5–6, αἴσθησιν [...] σύμφυτον ('inborn perception'), from the passage dealing with the construction of the human soul. See also Dörrie–Baltes (2002) 54, 242–244, though they fail to print the Xenocrates lemma.

§6 For the afterlife of Aristotle's definition see Mansfeld (1992b) 141–146. Cicero's ἐνδελέχειαν (*Tusc.* 1.22), however, is not a scribal error, as is clear from his exegesis which may be compared to that of *entelecheia* at AD fr. 5 Diels at Stob. (ch. *Περὶ ιδεῶν*) 1.12.1b, p. 135.5–7 ἐντελέχειαν (δ') αὐτὸ προσεῖπεν ἥτοι διὰ τὸ ἐνδελεχῶς ὑπάρχειν, ἢ ὅτι τῶν μετεχόντων αὐτοῦ ἕκαστον παρέχεται τέλειον. Note that S has ἐνδελέχειαν σώματος the first time and ἐντελέχειαν the second; Epiphanius *Haer.* 3. p. 508.9 has ἐνδελέχειαν σώματος too. The other word is also at Philo *Somn.* 1.30; it follows that the vulgarizing corruption was in the text he used, just as in one place of that used by S. A comparable confusion seems to be behind Anon. Londiniensis *Iatr.* col. i.24–25 and ii.9, where we read ἐντρέχεια, 'aptitude'. For a defence of the view that Aristotle may have used the term ἐνδελέχεια see however Dörrie–Baltes (2002) 1.159. Note that ἐνδελέχειαν at ch. 1.18.6

ἀναιρετικὴν γὰρ εἶναι τὴν κατ' ἐνδελέχειαν αὐτοῦ (sc. τοῦ τόπου) φύσιν τῆς τε τῶν ὄντων συμπαθείας καὶ τῆς τῶν σωμάτων ἀλληλουχίας, must mean something like 'actual existence', for if not a scribal error it means the same as ἐντελέχεια.

§7 We note in passing that the doctrine of the 'soul as harmony', famous from the discussion in Plato's *Phaedo* and Aristotle's *De anima* (1.4) and found in other doxographical accounts as well (where it is sometimes attributed to Pythagoras and/or Philolaus), is absent, perhaps because of an accident in transmission, or, more likely, because the epitomator or one of his predecessors believed that the references to it in (§5 and) §7 were sufficient. The attribution to Aristoxenus and Dicaearchus elsewhere of the view that the soul does not exist has some force in the context of a diaphonic presentation (namely as a zero position, see section E(a) & (b) §§0, §§7–8). Actually, however, both these men merely held that the soul does not exist in the usual sense, viz. as something apart from the body. The attribution by implication in §7 of the idea that the soul is an *incorporeal* is at odds with this view.

The confusion of Dicaearchus with the orator Dinarchus of Corinth or with (perhaps) the Peripatetic Clearchus occurs more often, see e.g. Sharples (2001a) 145 n. 10. It is merely a matter of the interpretation of an abbreviation. For Galen's reference to Andronicus quoted under section E(b) see Moraux (1973) 134–135 n. 9, and Caston (1997) 351–353.

§8 (Five) senses: cf. Macrobius *in Somn.* 1.14.19, ps. Galen *Def. Med.* 19.373.3–5, 379.8–9K., see section E(b)§8. In view of the arrangement of the lemmata in ascending order according to number, the Asclepiades lemma (content paralleled in other sources) gives the t.p.q. of the composition of the chapter. The senses in general are the subject of ch. 4.8, their number (in the context of the present chapter in P's version apparently less relevant) of ch. 4.10.

e Other Evidence

In the proximate tradition Cicero *Tusc.* 1.19–22 presents the corporealists before the incorporealists (though appending Democritus *ad finem*), and so do Philo *Somn.* 1.30 and Nem *NH* 2, p. 16.13–17.10, while Tertullian *de An.* 5 (Soranus *de An.* fr. 2 Podolak), like A, has first the incorporealists and then the corporealists. To some extent doxai and name-labels are confirmed by Nemesius, who lists Thales, Pythagoras, Aristotle, and Deinarchus (*sic*, for Dicaearchus). Galen *PHP* 7.3.19 opposes the view that the soul is incorporeal to the view that it is corporeal (i.e., *pneuma*), and *QAM* c. 5, p. 32.5–8 Bazou the view that it is corporeal to the view that it is incorporeal ('e.g. Plato'). For the quaestio in Galen's *De propriis placitis*, where it is one of the important issues (with Galen characteristically abstaining from committing himself), see below, section E(b). Tertullian *de An.* 3.2 (cited above at Book 4 titulus et index) lists as issues on which the philo-

sophers disagree the soul's mortality vs. immortality (cf. ch. 4.7), its substance (cf. chs. 4.2–3), form, condition, and origin (cf. ch. 4.7a). The contrast between calling the soul either body or incorporeal is discussed in Ptolemy's *On the Criterion and Hegemonikon* §7; his point of view is that names i.e. qualifications are irrelevant (he deals with the soul as composed of corporeal elements in the sequel of the treatise). For Nemesius see above, section A(4). Twenty-two chapters in Psellus' *De omnifaria docrina* share the heading Περὶ ψυχῆς, and so does G c. 24, a chapter outside the tradition of P.

A doxography on the soul that to some extent depends on the *Placita* is found in the 13th cent. author Barhebraeus, *Candélabre des sanctuaires*, 8th base introd., trans. Bakoš (1948) 1–2: 'Des opinions que les anciens ont eu sur l'âme humaine. ... Certains, donc, ont dit que c'est un corps (cf. ch. 4.3); d'autres, par contre, que c'est un accident qui subsiste dans le corps; d'autres, par contre, que ce n'est pas un corps, mais non plus un accident dans le corps' (thus, an incorporeal). Early names plus doxai listed for the first category are Democritus, Thales, Anaximenes, Heraclitus, for the second Alexander of Aphrodisias, and for the third Aristotle, the Peripatetics, and Gregory of Nyssa. A similar doxography dealing with the principles is found elsewhere in Barhebraeus *Candélabre des sanctuaires*, namely at 2nd base introd.; see above, ch. 1.3, Commentary D(e) *ad finem*. See also Dörrie–Baltes (2002), texts 1.2–12, rich commentary 1.145–170 (on Cic. *Tusc.* 1.18–22, Macr. *Somn.* 1.14 + 1.19–20, and Nem *NH* 2 p. 16.12–17.14).

E Further Related Texts

a Proximate Tradition

General texts (see also above at Book 4 titulus et index, Related texts, and below, ch. 4.3, section E(a) General texts): Cicero *Tusc.* 1.19–22: see below §0. *Tusc.* 1.66 (= *Cons. fr.* 11) *animorum nulla in terris origo inveniri potest; nihil enim est in animis mixtum atque concretum aut quod ex terra natum atque fictum esse videatur, nihil ne aut umidum quidem aut flabile aut igneum. his enim in naturis nihil inest, quod vim memoriae mentis cogitationis habeat, quod et praeterita teneat et futura provideat et complecti possit praesentia. quae sola divina sunt, nec invenietur umquam, unde ad hominem venire possint nisi a deo. singularis est igitur quaedam natura atque vis animi seiuncta ab his usitatis notisque naturis.* *Tusc.* 1.70 *quae est eius natura? propria, puto, et sua. sed fac igneam, fac spirabilem: nihil ad id de quo agimus.* Philo of Alexandria *Somn.* 1.30 τί γὰρ αὐτὸν (sc. τὸν νοῦν) οἰόμεθα κατὰ τὴν οὐσίαν εἶναι; πνεῦμα ἢ αἷμα ἢ σῶμα συνόλως—ἀλλ' οὐ σῶμα, ἀσώματον δὲ λεκτέον. *Mut.* 10 τίς γὰρ ψυχῆς οὐσίαν εἶδεν; ἥς ἢ ἀδηλότης μυρίας ἔριδας σοφισταῖς ἐγέννησεν ἐναντίας εἰσηγουμένοις γνώμας ἢ καὶ ὅλοις γένεσιν ἀντιστατούσας. *Cher.* 114 τίς δὲ ἐστὶ τὴν οὐσίαν (sc. of the soul), ἔχομεν εἰπεῖν; Seneca *Ep.* 121.12 *nos quoque animum habere*

nos scimus: quid sit animus, ubi sit, qualis sit aut unde nescimus. Nat. 7.25.2 habere nos animum, cuius imperio et impellimur et revocamur, omnes fatebuntur. quid tamen sit animus ille rector dominusque nostri non magis tibi quisquam expedit quam ubi sit. alius illum dicet spiritum esse, alius concentum quendam, alius vim divinam et dei partem, alius tenuissimum animae, alius incorporealem potentiam; non deerit qui sanguinem dicat, qui calorem. ps.Galen Def.Med. 19.355.11–17 K. κθ'. ψυχὴ ἐστὶν οὐσία ἀσώματος, αὐτοκίνητος κατὰ Πλάτωνα (but Phdr. 245c we must read αἰκίνητον). κατὰ δὲ τοὺς Στωϊκοὺς (SVF 2.780) σῶμα λεπτομερές ἐξ ἑαυτοῦ κινούμενον κατὰ σπερματικούς λόγους. κατὰ δὲ τὸν Ἀριστοτέλη (de An. 2.1 412a27–b1) ἐντελέχεια σώματος φυσικοῦ ὀργανικοῦ δυνάμει ζῶν ἔχοντος. ἄλλως. ψυχὴ ἐστὶ πνεῦμα παρεσπαρμένον ἐν ὅλῳ τῷ σῶματι δι' οὗ ζῶμεν καὶ λογιζόμεθα καὶ ταῖς λοιπαῖς αἰσθήσεσιν ἐνεργοῦμεν ὑπηρετοῦντος τοῦ σώματος. Galen PHP 7.7.25 εἰ δὲ καὶ περὶ ψυχῆς οὐσίας ἀποφῆνασθαι χρή, δυοῖν θάτερον ἀναγκαῖον εἰπεῖν· ἢ τοῦτ' εἶναι τὸ οἶον αὐγοειδὲς τε καὶ αἰθερώδες σῶμα λεκτέον αὐτὴν, εἰς δ' καὶ μὴ βούλωνται κατ' ἀκολουθίαν ἀφικνούνται Στωϊκοί (—) τε καὶ Ἀριστοτέλης, ἢ αὐτὴν μὲν ἀσώματον ὑπάρχειν οὐσίαν, ὄχημα δὲ τὸ πρῶτον αὐτῆς εἶναι τοῦτ' ὅτι σῶμα δι' οὗ μέσου τὴν πρὸς τὰλλα σῶματα κοινωνίαν λαμβάνει. Sententiae Sexti (Append. 2A, 559) ὁ τοῦ θεοῦ νοῦς αὐτοκίνητος καὶ ἀεικίνητος.
Themistius *in de An.* 13.21–23 ἔοικε δὲ καὶ Θαλῆς (fr. 301 Wöhrle) κινήτικόν τι τὴν
 ψυχὴν ὑπολαβεῖν, εἴπερ διὰ τοῦτο ἔφη τὸν σίδηρον ἔλκεσθαι ὑπὸ τῆς λίθου τῆς ἡρα-
 κλείας, ὅτι ἔμψυχος ἐκείνη ἡ λίθος. **Simplicius** (? perhaps Priscianus Lydus) *in*
de An. 31.20–26 τοσοῦτον δὲ περὶ Θαλοῦ (fr. 422 Wöhrle) ἱστορήσας (sc. Aristotle),
 καὶ τοῦτο μετὰ τινος ἐπιτιμῆσεως, ὅτι τῇ μαγνήτιδι λίθῳ ψυχὴν ἐδίδου ὡς κινήτικῇ
 τοῦ σιδήρου, ἵνα κατ’ ἐκείνον κινήτικὴν εἶναι τὴν ψυχὴν πιστώσῃται, οὐκ ἐπὶ τὸ ὕδωρ
 εἶναι τὴν ψυχὴν εἰς αὐτὸν ἀνέπεμψεν, καίτοι στοιχεῖον τὸ ὕδωρ τιθέμενον, ἐπειδὴ τῶν
 σωμάτων τὸ ὕδωρ ἔλεγε στοιχεῖον, εἰκὸς δὲ ἀσώματον αὐτὴν ἐκείνον ὑποτίθεσθαι.
John Philoponus *in de An.* 9.10–12 οἱ δὲ ἐξ ὕδατος, ὡς Θαλῆς (fr. 440 Wöhrle)
 καὶ Ἰππῶν ὁ ἐπίκλην ἄθεος· ἐπειδὴ γὰρ τὴν γονὴν ἐώρων ἐξ ὑγρᾶς οὐσαν οὐσίαν,
 διὰ τοῦτο καὶ ὕδωρ τὴν ἀρχὴν τῶν ὄντων ἐνόμισαν. *in de An.* 86.23–34 οὐ γὰρ εἶπε
 (sc. Aristotle) φέρ’ εἰπεῖν ὅτι Θαλῆς (fr. 442 Wöhrle) τὸ ὕδωρ ψυχὴν τίθεται καὶ διὰ
 τοῦτο ἔλκειν φησὶ τὸν σίδηρον τὴν λίθον ὡς ἔμψυχον καὶ διὰ τοῦτο ἐξ ὕδατος οὐσαν.
 ... διὰ ταῦτα τοῦτου μὲν οὐ λέγει εἶναι τὴν δόξαν ταύτην ὅτι ἐξ ὕδατος ἡ ψυχὴ, ἀλλὰ
 τοσοῦτον μόνον ὅτι καὶ αὐτὸς τὴν κίνησιν τῇ ψυχῇ ἀπένειμεν. **Aristotle** *de An.* 1.5
 411a7–8 καὶ ἐν τῷ ὅλῳ δὴ τινες αὐτὴν μεμίχθαι φασιν, ὅθεν ἴσως καὶ Θαλῆς (11A22
 DK) ᾤθη πάντα πλήρη θεῶν εἶναι. τοῦτο δ’ ἔχει τινὰς ἀπορίας κτλ. **Themistius**
in de An. 35.26–29 ἔστι δὲ καὶ ἑτέρα τις δόξα παρὰ τὰς εἰρημένους περὶ ψυχῆς,
 ἐν παντὶ τῷ ὄντι μεμίχθαι λέγουσα τὴν ψυχὴν καὶ διὰ παντὸς διήκειν τοῦ κόσμου
 καὶ πᾶν αὐτοῦ μόνον ἔμψυχον εἶναι. διὰ γὰρ ταύτην τὴν δόξαν καὶ Θαλῆς (fr. 302
 Wöhrle) ᾤθη πάντα πλήρη θεῶν εἶναι. **John Philoponus** *in de An.* 188.14–18
 ἑτέραν δόξαν ἐκτίθεται (sc. Aristotle) περὶ ψυχῆς. ὑπενόησαν, φησί, τινες ψυχὴν ἐν
 παντὶ σώματι μεμίχθαι, ὡς πᾶν εἶναι σῶμα ἔμψυχον· ἐκ δὲ τῆς τοιαύτης δόξης καὶ
 τὸν Θαλῆν (fr. 443 Wöhrle) νομίσαι πάντα πλήρη θεῶν εἶναι, τοπικῶς ὑπονοοῦντος
 τοῦ Θαλοῦ πανταχοῦ εἶναι τὸ θεῖον, ἢ τῷ αὐτῇ τὴν ψυχὴν θεὸν ὑπονοεῖν, ἢ θείας
 μοίρας αὐτὴν εἶναι.

§2 **Alcmaeon**: **Aristotle** *de An.* 1.2 405a29–b1 παραπλησίως δὲ τούτοις (sc.
 Thales Diogenes Heraclitus) καὶ Ἀλκμαίων (24A12 DK) ἔοικεν ὑπολαβεῖν περὶ
 ψυχῆς· φησὶ γὰρ αὐτὴν ἀθάνατον εἶναι διὰ τὸ εἰκέναι τοῖς ἀθανάτοις· τοῦτο δ’ ὑπάρ-

χειν αὐτῇ ὡς αἰετὶ κινουμένη· κινεῖσθαι γάρ καὶ τὰ θεῖα πάντα συνεχῶς αἰετὶ, σελήνην, ἥλιον, τοὺς ἀστέρας καὶ τὸν οὐρανὸν ὅλον. **Boethus at Porph. de An. adv. Boeth.** (243F Smith) at Eus. *PE* 11.28.7–9 εἰ μὲν ἀθάνατός ἐστιν ἡ ψυχὴ καὶ παντὸς ὀλέθρου κρείττων τις φύσις, πολλοὺς ἀναμείναντα χρόνῳ καὶ περιηγησάμενον λόγους ἀποφύνασθαι. (8) τὸ μέντοι τῶν περὶ ἡμᾶς ὁμοιότερον μηδὲν γενέσθαι θεῶν ψυχῆς, οὐ πολλῆς ἂν τις δεηθεῖς πραγματείας πιστεύσειεν, οὐ μόνον διὰ τὸ συνεχῆ καὶ ἄπαυστον τῆς κινήσεως, ἣν ἐν ἡμῖν ἐνδίδωσιν, ἀλλὰ τοῦ καθ' ἑαυτὴν νοῦ. (9) εἰς ὅπερ ἀπιδὼν καὶ ὁ Κροτωνιάτης φυσικός (cf. *VS* 1 app. p. 495.45–46) εἶπεν ἀθάνατον αὐτὴν οὖσαν καὶ πᾶσαν ἡρεμίαν φύσει φεύγειν, ὥσπερ τὰ θεῖα τῶν σωμάτων. **Porph. de An. adv. Boeth.** (249F Smith) at Eus. *PE* 15.11.4 'ἐπὶ δὲ τῷ λέγοντι (sc. Plato) αὐτοκίνητον οὐσίαν οὐκ ἂν τις, φησὶν, αἰσχυρθεῖη'.

§§3–5 **Pythagoras Xenocrates Plato: Aristotle de An.** 1.2 404a20–21 ἐπὶ ταῦτο δὲ φέρονται καὶ ὅσοι λέγουσι τὴν ψυχὴν 'τὸ αὐτὸ κινεῖν' (Pl. *Phdr.* 245c). *de An.* 1.2 404b16–30 Πλάτων ἐν τῷ Τιμαίῳ ... ἐνιοι (Xenocrates fr. 6o Heinze, F 85 Isnardi Parente²) συνέπλεξαν ἐξ ἀμφοῖν, ἀποφηνάμενοι τὴν ψυχὴν ἀριθμὸν κινεῖν ἑαυτὸν. *Top.* 6.3 140b2–4 (Xenocrates fr. 6o Heinze, F 89 Isnardi Parente²) τοιοῦτος δὲ καὶ ὁ τῆς ψυχῆς ὅρος, εἴπερ ἀριθμὸς αὐτὸς αὐτὸν κινῶν ἐστιν· καὶ γὰρ τὸ αὐτὸ αὐτὸ κινεῖν ψυχὴν, καθάπερ Πλάτων (*Phdr.* 245c) ὥρισται. *APo.* 2.8 93a21–24 τὸ δ' εἴ ἐστιν ὅτε μὲν κατὰ συμβεβηκὸς ἔχομεν, ὅτε δ' ἔχοντές τι αὐτοῦ τοῦ πράγματος, οἷον ... καὶ ψυχὴν, ὅτι 'αὐτὸ αὐτὸ κινεῖν' (Pl. *Phdr.* 245c). **Plutarch An.Procr.** 1013C–D ἀριθμὸν γε μὴν ὁ Πλάτων οὐδέποτε τὴν ψυχὴν προσεῖπεν ἀλλὰ κίνησιν αὐτοκίνητον αἰετὶ καὶ 'κινήσεως πηγὴν καὶ ἀρχὴν' (*Phdr.* 245c πηγὴ καὶ ἀρχὴ κινήσεως)· ἀριθμῷ δὲ καὶ λόγῳ καὶ ἀρμονίᾳ διακεκοσμήκε τὴν οὐσίαν αὐτῆς ὑποκειμένην καὶ δεχομένην τὸ κάλλιστον εἶδος ὑπὸ τούτων ἐγγιγνόμενον. οἶμαι δὲ μὴ ταῦτόν εἶναι τῷ (D) κατ' ἀριθμὸν συνεστάναι τὴν ψυχὴν τὸ τὴν οὐσίαν αὐτῆς ἀριθμὸν ὑπάρχειν, ἐπεὶ (καὶ) καθ' ἀρμονίαν συνέστηκεν ἀρμονία δ' οὐκ ἐστιν, ὡς αὐτὸς ἐν τῷ Περὶ ψυχῆς (*Phd.* 92) ἀπέδειξεν. **Diogenes Laertius VP.** 3.67 (on Plato's soul) αὐτοκίνητόν τε εἶναι. **Simplicius** (? perhaps Priscianus Lydus) in *de An.* 10.32–33 οἱ μὲν οὖν Πυθαγόρειοι καὶ Πλάτων οὐσίαν αὐτὴν φασιν.

§4 **Xenocrates: Plutarch An.Procr.** 1012D Ξενοκράτης (fr. 68 Heinze, F 108 Isnardi Parente²) ... τῆς ψυχῆς τὴν οὐσίαν ἀριθμὸν αὐτὸν ὑφ' ἑαυτοῦ κινούμενον ἀποφηνάμενος. **Themistius in de An.** 32.22–31 ἀλλὰ χρὴ παραβάλλειν τὰ Ἀνδρονίκου (see below §7) πρὸς τὰ ἐκείνου (sc. Porphyry's), ὅσῳ καὶ σαφέστερα καὶ πιθανώτερα πρὸς σύστασιν τοῦ λόγου τοῦ Ξενοκράτους (fr. 61 Heinze, F 180 Isnardi Parente²). 'ἀριθμὸν γὰρ ἐκάλουν' φησὶ 'τὴν ψυχὴν, ὅτι μηδὲν ζῶον ἐξ ἀπλοῦ σώματος, ἀλλὰ κατὰ τινες λόγους καὶ ἀριθμοὺς κραθέντων τῶν πρώτων στοιχείων. σχεδὸν οὖν ταῦτόν ἀπεφάνοντο τοῖς ἀρμονίαν αὐτὴν τιθεμένοις, πλὴν ὅσῳ σαφέστερον οὗτοι τῇ προσθήκῃ τὸν λόγον ἐποίησαν, οὐ πάντα ἀριθμὸν, ἀλλὰ τὸν κινεῖντα ἑαυτὸν τὴν ψυχὴν ἀφοριζόμενοι, ὥσπερ ἂν εἰ καὶ ἐκεῖνοι μὴ πᾶσαν ἀρμονίαν, ἀλλὰ τὴν ἀρμόζουσαν ἑαυτὴν· αὐτὴ γάρ ἐστιν ἡ ψυχὴ τῆς κράσεως ταύτης αἰτία καὶ τοῦ λόγου καὶ τῆς μίξεως τῶν πρώτων στοιχείων.' **Favonius Eulogius in Somn.** 5.6 *estque numerus, ut Xenocrates* (fr. 16 Heinze, F 134 Isnardi Parente²) *censuit, animus*. **Simplicius** (? perhaps Priscianus Lydus) in *de An.* 10.34–35 Ξενοκράτης (fr. 6o Heinze, F 100 Isnardi Parente²) δὲ ἀριθμὸν αὐτὴν θέμενος ἐν ποσῷ δοκεῖ. **John Philo-**

ponus in *de An.* 165.24–26 (Xenocrates fr. 65 Heinze, F 117 Isnardi Parente²) ἀριθμούς δὲ τὰ εἶδη ἐκάλουν, ὡς εἴρηται· καὶ αὐτὸς (sc. Arist. *de An.* 3.4 429a2728) γοῦν ἐν τοῖς ἐξῆς φησιν ‘καὶ εὖ δὴ οἱ λέγοντες τὴν ψυχὴν τόπον εἰδῶν’. ἀριθμὸν μὲν οὖν διὰ τοῦτο, κινούμεντα δὲ αὐτὸν διὰ τὸ αὐτοζῶν αὐτῆς.

§5 Plato: *Plato Tim.* 33c–36e. *Aristotle de An.* 1.3 406b25–407a2, esp. 406b29 κατὰ τοὺς ἀρμονικοὺς ἀριθμούς. *Diogenes Laertius V.P.* 3.67–68 (on Plato) ἀρχὴν τε ἔχειν (sc. τὴν ψυχὴν) ἀριθμητικὴν, τὸ δὲ σῶμα γεωμετρικὴν· ὠρίζετο δὲ αὐτὴν ιδέα τοῦ πάντη διεστῶτος πνεύματος. αὐτοκίνητόν τε εἶναι (68) διαιρεθεῖσάν τε κατὰ ἀρμονικὰ διαστήματα δύο κύκλους ποιεῖν συνημμένους, ὧν τὸν ἐντὸς κύκλον ἐξαχῇ τμηθέντα τοὺς ἅπαντας ἑπτὰ κύκλους ποιεῖν. καὶ τοῦτον μὲν κατὰ διάμετρον κ(ι)εῖσθαι ἐπ’ ἀριστερά ἔσωθεν, τὸν δὲ κατὰ πλευρὰν ἐπὶ τὰ δεξιὰ.

§6 Aristotle: *Aristotle de An.* 2.1 412a19–22 ἀναγκαῖον ἄρα τὴν ψυχὴν οὐσίαν εἶναι ὡς εἶδος σώματος φυσικοῦ δυνάμει ζωὴν ἔχοντος. ἡ δ’ οὐσία ἐντελέχεια· τοιούτου ἄρα σώματος ἐντελέχεια. *de An.* 2.1 412b4–6 εἰ δὴ τι κοινὸν ἐπὶ πάσης ψυχῆς δεῖ λέγειν, εἴη ἂν ἐντελέχεια ἢ πρώτη σώματος φυσικοῦ ὁργανικοῦ. **Plutarch** *Plat. Quaest.* 1006D Ἀριστοτέλης (mix of *de An.* 2.1 412a27–28 and b5–6) ὠρίσατο τὴν ψυχὴν ‘ἐντελέχειαν σώματος φυσικοῦ ὁργανικοῦ δυνάμει ζωὴν ἔχοντος’. **Alexander of Aphrodisias** *de An.* 16.10–14 (soul is) ἐντελέχεια οὖν ἢ πρώτη σώματος φυσικοῦ ὁργανικοῦ. ἔστι γὰρ ὁργανικὸν σῶμα τὸ ἔχον πλεῖω τε καὶ διαφέροντα μέρη ψυχικαῖς δυνάμεσιν ὑπηρετεῖσθαι δυνάμενα. διὸ τὸ ὁργανικὸν σῶμα καὶ δυνάμει ζωὴν ἔχειν λέγει, τῷ δυνάμει ζωὴν ἔχον ἀντὶ τοῦ δυναμένου κατ’ ἐνέργειαν ζῆν χρώμενος. **Alexander of Aphrodisias**(?) *An.Mant.* 104.21–24 ἔστι δὲ ἡ ψυχὴ ἐντελέχεια οὐσα δι’ ὅλου τοῦ σώματος. πᾶν γὰρ ἔμψυχον τὸ ἔμψυχου μέρος. καὶ ἔστιν ἐντελέχεια ἢ ψυχὴ οὔτε ὡς τὸ σχῆμα τῶν ἐσχηματισμένων, οὔτε ὡς ἡ θέσις καὶ τάξις τῶν συγκειμένων, οὐδ’ ὡς διάθεσις τις καὶ πάθος, οὔθ’ ὡς μῖξις ἢ κράσις. **Plotinus** *Enn.* 4.2.[4].1.3–4 τό τε τῆς ἐντελεχείας οὔτε ἀληθές οὕτως, ὡς λέγεται, οὔτε δηλωτικὸν ὃν τοῦ τί ἐστὶν ἀφέντες. *Enn.* 4.7.[2].85.1–5 τὸ δὲ τῆς ἐντελεχείας ᾧδ’ ἂν τις ἐπισκέψαιτο, πῶς περὶ ψυχῆς λέγεται· τὴν ψυχὴν φασὶν ἐν τῷ συνθέτῳ εἶδους τάξιν ὡς πρὸς ὕλην τὸ σῶμα ἔμψυχον (ὃν) ἔχειν, σῶματος δὲ οὐ παντὸς εἶδος οὐδὲ ἡ σῶμα, ἀλλὰ φυσικοῦ ὁργανικοῦ δυνάμει ζωὴν ἔχοντος. **Diogenes Laertius V.P.** 5.32–33 (on Aristotle) καὶ τὴν ψυχὴν δὲ ἀσώματον, ἐντελέχειαν οὐσαν τὴν πρώτην σώματος {γὰρ} φυσικοῦ καὶ ὁργανικοῦ δυνάμει ζωὴν ἔχοντος. (33) λέγει δὲ τὴν ἐντελέχειαν ἥ ἐστιν εἰδός τι ἀσώματον. διττὴ δ’ ἐστὶν αὕτη κατ’ αὐτόν· ἡ μὲν κατὰ δύναμιν, ὡς ἐν τῷ κηρῷ ὁ Ἑρμῆς ἐπιτηδεύοντα ἔχοντι ἐπιδέξασθαι τοὺς χαρακτήρας, καὶ {ὁ} ἐν τῷ χαλκῷ ἀνδριάς· καθ’ ἕξιν δὲ λέγεται ἐντελέχεια ἢ τοῦ συντετελεσμένου Ἑρμοῦ ἢ ἀνδριάντος. σῶματος δὲ φυσικοῦ, ἐπεὶ τῶν σωμάτων τὰ μὲν ἐστὶ χειρόκιμητα, ὡς τὰ ὑπὸ τεχνιτῶν γινόμενα, οἷον πύργος, πλοῖον· τὰ δὲ ὑπὸ φύσεως, ὡς φυτὰ καὶ τὰ τῶν ζῶων. ὁργανικοῦ δὲ εἶπε, τούτεστι πρὸς τι κατεσκευασμένου, ὡς ἡ ὄρασις πρὸς τὸ ὁρᾶν καὶ ἡ ἀκοὴ πρὸς τὸ ἀκούειν· δυνάμει δὲ ζωὴν ἔχοντος, οἷον ἐν ἑαυτῷ. **Porphyry** *de An. adv. Boeth.* (249F Smith) at Eus. *PE* 15.11.4 πῶς γὰρ οὐκ αἰσχροὺς ὁ ἐντελέχειαν τιθεὶς τὴν ψυχὴν λόγος σώματος φυσικοῦ ὁργανικοῦ; P. 31 Smith at *Sud.* s.v. Π 2098, p. 4.178.24–25 Adler πρὸς Ἀριστοτέλην (περὶ) τοῦ εἶναι τὴν ψυχὴν ἐντελέχειαν. **Iamblichus** *de An.* fr. 9 Finamore–Dillon at Stob. *Ecl.*

1.49.32, pp. 366.26–367.2 ἕτεροι (sc. τῶν Ἀριστοτελικῶν) δὲ τελειότητα αὐτὴν ἀφορίζονται κατ' οὐσίαν τοῦ θεοῦ σώματος, ἣν ἐντελέχειαν καλεῖ Ἀριστοτέλης.

§7 **Dicaearchus:** *Aristotle de An.* 1.4 407b30–32 ἀρμονίαν γὰρ τινα αὐτὴν λέγουσι· καὶ γὰρ τὴν ἀρμονίαν κράσιν καὶ σύνθεσιν ἐναντίων εἶναι, καὶ τὸ σῶμα συγκεῖσθαι ἐξ ἐναντίων. *Pol.* 8.5 1340b18–19 διὸ πολλοὶ φασὶ τῶν σοφῶν οἱ μὲν ἀρμονίαν εἶναι τὴν ψυχὴν, οἱ δ' ἔχειν ἀρμονίαν. **Lucretius** *DRN* 3.98–101 *sensum animi certa non esse in parte locatum, / verum habitum quendam vitalem corporis esse, / harmoniam Graeci quam dicunt, quod faciat nos / vivere cum sensu, nulla cum in parte siet mens.* *DRN* 3.117–118 *nunc animam quoque ut in membris cognoscere possis / esse neque harmonia corpus sentire solere.* **Cicero** *Tusc.* 1.19–20 *Aristoxenus* (fr. 120(a) Wehrli, I a 1 05 Kaiser) ... *ipsius corporis intentionem quandam, velut in cantu et fidibus quae ἀρμονία dicitur: sic ex corporis totius natura et figura varios motus cieri tamquam in cantu sonos, ...* (20) *dixit aliquid* (sc. animam harmoniam esse) *quod ipsum quale esset erat multo ante et dictum et explanatum a Platone.* *Tusc.* 1.11 *Aristoxeni* (fr. 119 Wehrli, Ia 1 10 Kaiser) *harmonia.* **Lactantius** *Op.D.* Perrin 16.13–14 *illud autem cave ne umquam simile veri putaveris quod Aristoxenus* (fr. 120(d) Wehrli, IV 1 25 Kaiser) *dicit, mentem omnino nullam esse, sed quasi harmoniam in fidibus ex constructione corporis et conpagibus viscerum vim sentiendi existere. ...* (14) *volunt enim animum simili ratione constare in homine qua concors modulatio constat in fidibus, scilicet ut singularum corporis partium firma coniunctio membrorumque omnium consentiens in unum vigor motum illum sensibilem faciat animumque concinnet sicut nervi bene intenti conspirant sonum.* **Seneca** *Nat.* 7.25.2 *alius concentum quondam.* **Plutarch** *Adv.Col.* 1119A–B ἢ τὸ παράπαν οὐκ ἔστιν οὐσία ψυχῆς ἄλλ' (B) αὐτὸ τὸ σῶμα κεκραμένον ἔσχηκε τὴν τοῦ φρονεῖν καὶ ζῆν δύναμιν. **Galen** *QAM c.* 4, pp. 26.9–27.1 Bazou [text after *Scr.Min.* p. 2.44 cf. Bazou pp. 26.9–27.1, where the name of Andronicus is attested by the Arabic version] Ἀνδρόνικον δὲ τὸν Περιπατητικόν (cf. above §4), ὅτι μὲν ὅλως ἐτόλμησεν ἀποφῆνασθαι τὴν οὐσίαν τῆς ψυχῆς (κράσιν ἢ δύναμιν εἶναι τοῦ σώματος add. Müller non prob. Bazou) ὡς ἐλεύθερος ἀνὴρ ἄνευ τοῦ περιπλέκειν ἀσφαδῶς, ἐπαινῶ τε πάντῃ ..., ὅτι δ' ἦτοι κράσιν εἶναι φησιν ἢ δύναμιν ἐπομένην τῇ κράσει, μέμφομαι τῇ προσθέσει τῆς δυνάμεως (but cf. **Nemesius** *NH c.* 2, p. 23.24–24.4 Γαληνὸς δὲ ἀποφάνεται μὲν οὐδέν, ἀλλὰ καὶ διαμαρτύρεται ἐν τοῖς Ἀποδεικτικοῖς λόγοις ὡς οὐδὲν εἶη περὶ ψυχῆς ἀποφηνάμενος· ἔοικε δέ, ἐξ ὧν λέγει, δοκιμάζειν μᾶλλον τὸ κράσιν εἶναι τὴν ψυχὴν (ταύτῃ γὰρ ἐπακολουθεῖν τὴν τῶν ἡθῶν διαφορὰν), ἐκ τῶν Ἱπποκράτους κατασκευάζων τὸν λόγον). *Propr.Plac.* 14, p. 187.27–28 Boudon-Millot–Pietrobelli, text Lami (= *Sub.Nat.Fac.* 4.760.17–18 K.) ἦτοι γε ἐκ τῆς τῶν τεττάρων στοιχείων κράσεως γενομένην. **Alexander of Aphrodisias** *de An.* 24.18–26.12. **Plotinus** *Enn.* 4.7.[2].84.2–5 ἄρ' οὖν ἕτερον μὲν σώματος, σώματος δέ τι, οἷον ἀρμονία; τοῦτο γὰρ ἀρμονία τῶν ἀμφὶ Πυθαγόραν λεγόντων ἕτερον τρόπον ᾧ ἦθυσαν αὐτὸ τοιοῦτόν τι εἶναι οἷον καὶ ἡ περὶ χορδὰς ἀρμονία. *Enn.* 4.2.[4].11–3 τὴν τῆς ψυχῆς οὐσίαν τίς ποτέ ἐστι ζητοῦντες σῶμα οὐδὲν αὐτὴν δεῖξαντες εἶναι, οὐδ' ἐν ἀσωμάτοις αὐτὴν ἀρμονίαν. **Andronicus of Rhodes** at Them. in *de An.* 32.26–31 σχεδὸν οὖν ταῦτόν ἀπεφαίνοντο τοῖς ἀρμονίαν αὐτὴν τιθεμένοις, πλὴν ὅσῃ σφαφέ-

στερον οὔτοι τῇ προσθήκῃ τὸν λόγον ἐποιοῦν, οὐ πάντα ἀριθμόν, ἀλλὰ τὸν κινούμεντα ἑαυτὸν τὴν ψυχὴν ἀφοριζόμενοι, ὥσπερ ἂν εἰ καὶ ἐκεῖνοι μὴ πᾶσαν ἁρμονίαν, ἀλλὰ τὴν ἀρμόζουσαν ἑαυτήν· αὐτὴ γάρ ἐστιν ἡ ψυχὴ τῆς κράσεως ταύτης αἰτία καὶ τοῦ λόγου καὶ τῆς μίξεως τῶν πρώτων στοιχείων. **Simplicius** (? perhaps Priscianus Lydus) *in de An.* 10.33–34 οἱ δὲ ἁρμονίαν σωμάτων εἰπόντες καὶ οἱ τοιάνδε κράσιν ἐν τῷ ποιῶ τίθενται.

§8 **Asclepiades**: **Galen** *Ut.Resp.* 4.484.1–3 K. Ἀσκληπιάδῃ (cf. Vallance *ANRW* 2.37.1, p. 717) δὲ οὐ(δὲ) ταῦτα μόνον, ἀλλὰ καὶ τὰ δι' ἐτέρων ἡμῖν εἰρημένα πρὸς τοὺς Περὶ ψυχῆς αὐτοῦ λόγους μάχεται. *Libr.Propr.* 11, p. 19.38–39 K. μικρόν δ' ἄλλο τὴν ἐπιγραφὴν ἔχον 'Περὶ οὐσίας τῆς ψυχῆς κατ' Ἀσκληπιάδην' (cf. Vallance *ANRW* 2.37.1, p. 720). *in Off.Med.* 18B.660.10–14 K. πεπεισμένοι δὲ εἰσιν ὡσαύτως ἅπαντες οἱ ἄνθρωποι καὶ κίνησιν εἶναι ... καὶ νοῦν καὶ μνήμην καὶ προαίρεσιν, ἃ πρὸς ἄλλοις πολλοῖς ἀνατρέπειν ἐπεχείρησεν Ἀσκληπιάδης (cf. Vallance *ANRW* 2.37.1, p. 720) ὡς οὐκ ὄντα. **Sextus Empiricus** *M.* 7.350 καὶ οἱ μὲν διαφέρειν αὐτὴν τῶν αἰσθήσεων, ὡς οἱ πλείους, οἱ δὲ αὐτὴν εἶναι τὰς αἰσθήσεις, καθάπερ διὰ τινων ὁπῶν τῶν αἰσθητηρίων προκύπτουσιν, ἥς στάσεως ἥρξε Στράτων (fr. 109 Wehrli, 61 Sharples) τε ὁ φυσικὸς καὶ Αἰνισίδημος (fr. B24A Polito). **Diogenes Laertius** *V.P.* 9.51 ἔλεγέ (on Protagoras, 80A1 DK) τε μὴδὲν εἶναι ψυχὴν παρὰ τὰς αἰσθήσεις, καθὰ καὶ Πλάτων φησὶν ἐν Θεαιτήτῳ (cf. 152a). **Tertullian** *de An.* 14.5 (Soranus *de An.* fr. 11 Podolak) *non longe hoc exemplum est a Stratone* (fr. 108 Wehrli, 59 Sharples) *et Aenesidemo* (fr. B24C Polito) *et Heraclito* (T 652 Mouraviev); *nam et ipsi unitatem animae tuentur, quae in totum corpus diffusa et ubique ipsa, velut flatus in calamo per cavernas, ita per sensuality variis modis emicet, non tam concisa quam dispensata.* differently **Calcidius** *in Tim.* c. 215 *aut enim moles quadam sunt leves et globosae eademque admodum delicatae, ex quibus anima subsistit, quod totum spiritus est, ut Asclepiades* (cf. Vallance *ANRW* 2.37.1, p. 714) *putat.*

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

(1) In the absence of E and G, the witnesses for P are confined to P^B and P^Q. As we have seen at ch. 4.2 (Commentary A) and shall also see at chs. 4.4, 4.6 and 4.7, there are parallels in the mixed bag of G c. 24 (see *traditio proxima*), which have reached their destination via a different route. E in the final Book of the *PE* only includes chapters 4.4–5 of P Books 4 and 5, so ch. 4.3 is absent, cf. Commentary A(1) at ch. 4.2 above.

(2) P has abridged rather thoroughly, as is clear when we set off his six lemmata, or, excluding the summarizing first lemma found in P alone, his five doxai, against the ten lemmata of S, or against the seven doxai of T. Missing are §§4, 6–9 and 12–13, but P6 (Heraclitus) is the only witness to the final lemma of the chapter.

(3) S and T have left out other doxai; in his concluding remark that ‘others have said other contrary things’ T obviously refers to what he has omitted. S has left out lemmata corresponding to P6 (Heraclitus), T6 (Empedocles), and T7 (Critias), and T has omitted a lemma corresponding to P4 and S4 (Democritus). Between his Heraclides (S₅) and Epicurus lemma (S₁₀) S has preserved no less than four lemmata omitted by both P and T. P at P6 (Heraclitus) is the only witness to the final lemma of the chapter. Because E did not copy out chs.

4.2–3, T cannot have used E as his source for P, although at CAG 5.16 (cited ch. 4.2 at *testes primi*) he includes the abstracts of ch. 4.3 following at 5.18 as belonging with what he has culled from ‘Plutarch, Porphyry and Aëtius’. T has preserved two rather particular lemmata *ad finem*, T6 (Empedocles) and T7 (Critias), which are not paralleled in either P or S, or indeed anywhere else in precisely this particular form. A, mentioned third at CAG 5.16, is his real source.

(4) Several doxai and name-labels are confirmed by Nem (cited at *testes secundi* above), who lists the Stoics (~ §3), Critias (~ §13), Hippo (~ §9), Democritus (~ §5), and Heraclitus (~ §14). Three of these doxai are preserved in only one of the three main witnesses each, namely Heraclitus only in P, Hippo only in S, and Critias only in T. The verbal parallels with P and S for ch. 4.3 at *NH* c. 2, p. 16.16–21 are very striking for §§3, 5, 13, and 14. They were placed by Diels *DG* 389 in his apparatus to the right column together with T, where we also find the single Critias lemma in T and Nem (= §14 Diels). In the case of §14 the verbal parallelism is particularly close, as can be seen when juxtaposed:

A §14: Ἡράκλειτος τὴν μὲν τοῦ κόσμου
ψυχὴν ἀναθυμίασιν ἐκ τῶν
ἐν αὐτῷ ὑγρῶν, τὴν δ' ἐν τοῖς ζώοις ἀπὸ τῆς
ἐκτὸς καὶ τῆς ἐν αὐτοῖς ἀναθυμιάσεως, ὁμο-
γενή.

Nem p. 16.19–21: Ἡράκλειτος δὲ τὴν μὲν
τοῦ παντὸς ψυχὴν ἀναθυμίασιν ἐκ τῶν
ὑγρῶν, τὴν δ' ἐν τοῖς ζώοις ἀπὸ τε τῆς
ἐκτὸς καὶ τῆς ἐν αὐτοῖς ἀναθυμιάσεως, ὁμο-
γενή πεφυκέναι.

It might be concluded that Nem drew on A for this doxa, as we were inclined to do in our discussion at M–R 1.293–294. But taking all the evidence into account for chs. 4.2–3 (and also 4.12–13) we now think it is better to postulate a common tradition for both texts, i.e. an *uberior fons*. See below, section D(e) and also our comments above on ch. 4.2, Commentary A(4).

On Hermias and ps.Justin, who for this and the previous chapter reveal a striking convergence noted by Diels *DG* 261, see our remarks at ch. 4.2 Commentary A(5). In relation to the present chapter we may refer to his citations of doxai corresponding to §2, §14, §6, and §9.

(5) T 5.18 has two extra lemmata compared with P^{BQ} but corresponding with S, namely §4 Parmenides Hippasus and §6 Heraclides, which again proves him to have used and abstracted the source shared with S, that is, A. In S the name-label of §6 is written as Heraclitus, a common confusion (corrected in the margin of ms P). Furthermore, in §2 P summarizes several name-labels in his inaccurate phrase οἱ δ' ἄπ' Ἀναξαγόρου, while T and S share two name-labels, namely Ἀναξιμένης and Ἀρχέλαος, which have been left out in P. The historically improbable Ἀναξίμανδρος is found only in T's version of §6 and could

have been added by him, but unlike Baümker we have kept it, for a view of his followers may have been attributed to him. T on the other hand does not include Διογένης, found only in S; Diels would like to omit ('abundare videtur'), but we have kept it. Extras in T as compared with P^{BQ}, not confirmed by S but paralleled in the wider doxographical tradition, are §§12–13 Empedocles and Critias (we have seen above that Critias is found in the strikingly parallel passage in Nemesius). These should be assigned to A too. The addition of Heraclitus after Hippasus that T makes to A's lemma §4 is perhaps more doubtful, see above, ch. 1.3, Commentary D(e)§7, but we prefer to keep it as well, see below, section D(e)§4/§14. Finally, T seems to have remembered a source which paid attention to personalia, for he writes 'Epicurus the son of Nicocles' (see app. crit. to §11), and cf. below, ch. 4.4 Commentary A(3) and ch. 4.5, Commentary D(d)§7.

See further above, ch. 4.2 Commentary A(3); further M–R 1.288 and 1.296–298, and Mansfeld (2018) at M–R 4.180–187 on the T/S source (esp. 4.183 for ch. 4.2); cf. further above, General Introduction section 2.5.

B Proximate Tradition and Sources

(1) *Proximate tradition.* For the proximate tradition see the various and detailed accounts of e.g. Cicero *Luc.* 124, *Tusc.* 1.19–21; Philo *Somn.* 1.30; Tertullian *de An.* 5.1–6, 9.5 (~ Soranus fr. 2 and 5 Podolak); and Macrobius *in Somn.* 1.14.19–20. To some extent these are dependent on earlier and richer versions of the tradition, but extra material has also been incorporated subsequently: not only new doxai, but also earlier ones through retrograde contamination

Wendland, who discovered and analyzed the Philo passage, at (1897) 1095 argued this proves that Philo used Diels' *Vetusta placita*. The Ciceronian and Philonic parallels are particularly important because they prove the indebtedness of A to a shared *anterior* tradition, just as in ch. 4.2 (where see at Commentary B), and then in chs. 4.5, 4.7, and as especially in 4.9, where the parallels with Cicero show the same sort of dependence on an anterior tradition as in chs. 4.2–3. In general see Mansfeld (1990a) 3065–3085 (Aëtius and a number of parallel passages), plus 3117–3121 (Philo) and 3126–3131 (Cicero); cf. above ch. 2.11, Commentary B and ch. 4.2, Commentary B, and below, ch. 4.5, Commentary B.

(2) *Sources.* The name-labels and earlier versions of the contents of four lemmata are found at various places in Aristotle *de An.* 1.2, and they occur in the virtually the same relative order (in Aristotle, Critias is last): §5 Democritus ~ Arist. *de An.* 1.2 403b31–404a5, §8 Diogenes ~ 405a21–22, §13 Critias ~ 405b5–6, §14 Heraclitus ~ 405a25–27. The contrast between corporeal and (almost) incorporeal soul too is already found in this chapter of Aristotle; also see the

announcement *de An.* 1.2 404b30–405a2, quoted section E(b) General texts. So the situation is analogous to that in ch. 4.2, where see at Commentary B.

C Chapter Heading

In P only; no variants (S subsumes the material under the general title used for ch. 4.2). Because of its further specification it is more informative than the umbrella heading of ch. 4.2. Note the limitation to the question type or category of οὐσία, substance, and the precise reference to the dominant attribute of corporeality (which shows that substance is here corporeal, not incorporeal as in the previous chapter). For οὐσία compare the headings of chs. 1.22, 1.26, 1.28, 2.11 (where see discussion at Commentary C), 2.13, 2.20, 2.25, and 5.3. For chapter headings with εἰ compare 1.5, 2.3, 2.4, 2.9, 4.9, 4.15, 4.20, 5.4, 5.5, 5.15, and 5.20 and above, ch. 1.1 Commentary A.

D Analysis

a Context

This is the second of the twenty-three chapters dealing with the human soul from various systematic points of view, and the second dealing with the soul *per se*. It is the counterpart of 4.2 on the incorporealist doxai (where see Commentary D(a) on the wider context and D(c) on rationale) and complements the account of ‘what’ the soul ‘is’ by dealing with the corporealist views. It is followed by 4.4, on the parts of soul. For the Stoic syllogisms concerned with the corporeality of the soul that are appended to the corporealist doxai elsewhere, viz. in the parallel passages in Tertullian and Nemesius see below, (e) other evidence.

b Number–Order of Lemmata

The relative order is the same in all three sources, so the lemmatic order of the chapter as restored (which only *ad finem* differs from that of Diels in the *DG*, who has the Heraclitus lemma not in the final position but as no. 12) is virtually independent from the lemmata contents, though encouragingly confirmed by them. P₂ (Anaxagoras) + P₃ (Stoics) + P₄ (Democritus) correspond with S₁ (Anaximenes Anaxagoras Archelaus Diogenes) + S₂ (Stoics) + S₄ (Democritus), as well as with T₁ (Anaximenes Anaximander Anaxagoras Archelaus) + T₂ (Stoics). All sources have an Epicurus lemma at or near the end, viz. at P₅, T₅, and S₁₀. T₄ (Heraclides) corresponds with S₅ (Heraclides), and is found in the same relative location. Nem provides the parallel for the Heraclitus lemma (P₆) in final position. Why the Heraclitus lemma is absent in S is not immediately clear. Perhaps the reason is that the final lemma of the series of excerpts from A 4.3 in S, with name-label Epicurus, is followed by a brief quotation from

Plato and a short abstract as well as a series of substantial ones from Hermetic literature (1.49.1b = first sentence of *Corpus Hermeticum* fr. xix; 1.49.2 = Pl. *Phdr.* 247c; 1.49.3 = *CH* fr. xx; 1.49.4 = *CH* fr. xvii; 1.49.5 = *CH* fr. iii; and 1.49.6 = *CH* fr. xix Nock and Festugière). This material may have made the Heraclitus lemma seem superfluous.

c Rationale–Structure of Chapter

The chapter, like ch. 4.2 with which it should be studied in tandem, deals with the question-types ‘what is it?’ and ‘how is it?’, or the categories of substance, quantity and quality, and provides several answers. This derives from Aristotle’s agenda, see *de An.* 1.1 402a7–8, and for further details above, ch. 4.2, Commentary D(c). As is clear from the contents of the doxai and the summary at ch. 4.3.1, the present chapter lists a selection of corporealist doctrines, which are opposed to the incorporealist doctrines found in 4.2. These two chapters are analysed at Mansfeld (1990a) 3065–3085 and compared with the wider tradition (esp. Cicero) *ibid.* 3122–3131 and 3118–3121 (Philo). The set of corporeal substances involved recalls those found in ch. 1.3 on the principles (and elements) and the cosmological chs. 2.11, 2.13, 2.20, and 2.25. When the soul consists of (a) corporeal substance(s), these are related to or even derived from substances to be found in the world outside.

Ch. 4.3 consists of three individual lemmata and two blocks. The first lemma provides the explicit link with the previous chapter by summarizing its contents. The two blocks are arranged according to number, i.e. the category of quantity: the doxai of the first block, §§2–9 (plus §10) are about a single substance or, as in the Democritus lemma, a homogeneous compound, while those of the second block, §§11–13, are about a mixture, or blend, of four (§11 plus §12 as emended) respectively two (§13) substances. Thus the basic diaeresis of the chapter is one between monists and pluralists which, as we have seen at ch. 1.3 Commentary D(c) and ch. 1.7 Commentary D(c), also holds for the original structure of the chapter on the *archai*, and for the second part of the chapter on the gods. The arrangement itself, however, which at §13 turns into a descending series, is not what one would expect, although a series of lemmata in first ascending and then descending order, the change in number being accompanied by an additional aspect, is once also found elsewhere in the *Placita*, namely at ch. 3.9.1–3, ‘one–two–one-and-finite’. Also compare ch. 4.4.1–7 with Commentary D(c), and ch. 4.8.1–4 with Commentary D(c)§§1–6, and for the descending order ch. 1.11.2–5 with Commentary D(c). The Empedocles lemma (§12) as emended and containing a wet element is placed between the Epicurus lemma (§11), where no wet element is listed, and the Critias lemma (§13), which refers not only to blood but cryptically also to ‘moisture’ in general. Perhaps the

phrase καὶ ἐξ ὑγροῦ should not be translated as ‘and from moisture’ but as ‘that is, from moisture’: blood is a liquid. The lemmata sequence is further determined by a diaeresis according to substance.

§10, which is about a single substance, ends the series of the monists plus the quasi-monist Democritus, so appropriately comes at the end of the first main part of the chapter. The doxographer then begins afresh with the pluralists. The order two–four has been dispreferred in favour of four–two because (and this is the second reason for not interfering) the final lemma, §14 Heraclitus, is now smoothly associated with the penultimate lemma, §13 Critias, because the ‘moistures’ (ὑγρῶν) of the former connect up with the ‘moisture’ (ὑγροῦ) of the latter. In the context of the present series of chapters the Heraclitean doxa is exceptional in that it not only speaks of human souls but also mentions the Soul of the cosmos (the only precise parallel for the latter formula in A is 1.7.8 at S 1.1.29b7, while the equivalent formula ‘Soul of the All’ is found in the Heraclitus lemma at ch. 4.7.2). Its position at the end of the chapter is therefore fully justified. It links up with ch. 4.4.8, also a final lemma, and with 4.7.2, which is also about individual souls in relation to a general Soul.

The doxai of the monists of the first block are ordered by a diaeresis (in the sense of an ordered list) according to the nature of the elements, or substances, at issue. The chief division is between §§2–5, substances leading up to or related to fire on the one hand, and on the other imitating a *descensus* from periphery to centre, §6 (aetherial?) light, §7 fire, §8 air, and §9 water. For §10 see below, further comments.

The linkage between the lemmata at §§2–5 is noteworthy: the air-like substance of §2 Anaximenes Anaximander Anaxagoras Archelaus Diogenes links up with the warm *pneuma* of §3 the Stoics, while the warmth of this *pneuma* preludes upon the fiery substance of §4 Parmenides and Hippasus, the homogeneous fiery mixture of §5 Democritus (and the fire of §7 Leucippus). The Milesians will be first for diadochical reasons, as is more often the case.

Also note the explicit connection between §2 σῶμα, §5 σῶμα, and §11 σώματος, which ensures that we do not forget that the chapter is about the corporealists.

d Further Comments General Points

The opposition corporealists vs. incorporealists derives from Aristotle *de An.* 1.2 404b30–31 quoted section E(b) General texts, see Mansfeld (1990a) 3072, 3204, M–R. 2.57–58, and is found in numerous dialectical-doxographical parallels, see material in Mansfeld (1990a) 3065–3085, and above, ch. 4.2 Commentary B and D(c). The explicit reference at §1 to the incorporeals echoes part of the diaeresis

as expressed in parallel sources. See also Dörrie–Baltes (2002), texts 1.2–12, rich commentary 1.145–170 (on Cicero *Tusc.* 1.18–22, Macrobius *in Somn.* 1.14.19–20 and Nem *NH* 2 p. 16.12–17.14).

Individual Points

§2 Diels believed that the name-label Diogenes (S only) had been interpolated from §8 below, but there is a difference between ‘airy’ and ‘air’ affording a measure of pseudoprecision, so this part of the lemma may derive from a slightly different interpretation of Diogenes of Apollonia, or (perhaps mistakenly or) *more doxographico* pertain to Diogenes of Babylonia. It seems more prudent to preserve it. Cf. Commentary D(d) at A 4.9.9 below. The presence here of the name-labels Anaximenes and Diogenes is what one would expect, unlike that of Anaximander (to whom a view associated with his follower Anaximenes is attributed, a not uncommon procedure), while Anaxagoras and in his wake Archelaus are seen as successors of Anaximenes. The quasi-information provided by the lemma is taken at face value by Congourdeau (2007) 133–134.

§3 The passage at Diogenes Laertius *V.P.* 7.156–157 is almost exactly parallel. For the intelligent *pneuma* cf. ch. 4.8.1.

§§4 & 14 Heraclitus: The attribution of more than one view to one philosopher in a single chapter is paralleled elsewhere in A, see e.g. the examples cited at M.-R. 2.2.523. So we prefer to keep T’s additional name-label ‘Heraclitus’, which is moreover confirmed by Tertullian *de An.* 5.

§4 The attribution to Parmenides of a fiery soul may be (but may also not be) a far echo of Theophrastus’ claim that ‘the better and purer understanding derives from the hot’ (*Sens.* 3).

§5 Democritus: the formula ‘things which are perceptible by reason (alone)’ at a first glance may suggest that the substance is incorporeal, but its fiery power entails explicitly that it is corporeal. This had to be said or needed to be emphasized, hence the addition of the final clause. The formula is found eight times in P, seven times in S, and often elsewhere. Presumably Epicurean coinage, e.g. *Ep.Hdt.* at D.L. 10.47, so never intended to apply to the incorporeal.

§6 aetherial(?) light: cf. Plutarch *De E* 390A τὸν δὲ πέμπτον (sc. κόσμον) οὐρανὸν οἱ δὲ φῶς, οἱ δ’ αἰθέρα καλοῦσιν, οἱ δ’ αὐτὸ τοῦτο πέμπτην οὐσίαν.

§8 That the soul is air is also attributed to Heraclitus ‘according to some’ (i.e. Aenesidemus) at Tertullian. *de An.* 9.5 (Aenesidemus fr. B26 Polito, quoted section B(a)§2) and Sextus Empiricus *M.* 9.360. (But two Heraclitean doxai in this chapter will have been enough for A.)

§9 Thales is not mentioned because he has been converted into an incorporealist; see above, ch. 4.2, Commentary D(d) at §1. That he is an incorporealist

is also the view of Simplicius (perhaps Priscianus) *in de An.* 31.24–26 quoted above, ch. 4.2, section E(b)§1, while John Philoponus *in de An.* 86.23–34, quoted below section E(b)§9, not unreasonably speculates that Aristotle declined to attribute a gross materialist tenet to Thales and so refrained from attributing the view that the soul consists of water to him.

§10 Xenarchus is to be dated between ca. 85 BCE and the beginning of the Common Era, see Strabo 14.5.4, Diels *DG* 100, Moraux (1973) 1.197, Falcon (2012) 11–12. So he is even somewhat later than Posidonius and Asclepiades, the last authorities to be mentioned elsewhere in A, and the last in the so-called *Vetusta placita* according to Diels *DG* 185, who therefore believes, *ibid.* 100, 184, that the lemma with name-label Xenarchus is a later (i.e. in his view Aëtian) addition, foreign to the earlier and according to him better tradition he baptized *Vetusta placita*. Moraux, o.c. 207, believes that Xenarchus like Alexander of Aphrodisias argued that the soul is inseparable from the body, but the wording of the lemma (μετὰ τοῦ σώματος συντεταγμένην) seems to be against this.

The present passage is the earliest instance of this combination of the terms εἶδος, τελειότης, and ἐντελέχεια, paralleled only in Alexander of Aphrodisias, *De anima* (cf. Falcon 2012, 133) and ps.Alexander *De anima mantissa*; see below at section E(b)§10. This shows on the one hand how carefully the doxographer composed this abstract, and on the other what Alexander's formula owes to his Peripatetic predecessors.

At *de An.* 19.21–23 Alexander mentions—and subsequently refutes—the view of unidentified opponents who say that ‘the soul is the *form* of the body, but make it one of the *corporeal* components of the living being, such as fire or air’ (οἱ δὲ λέγοντες εἶδος μὲν εἶναι τὴν ψυχὴν τοῦ σώματος, ἐν δέ τι τῶν ὑποκειμένων ἐν τῷ ζῳῷ σωμάτων ποιοῦντες αὐτήν, οἷον πῦρ ἢ ἄερα ἢ τι ἄλλο). He may very well have Xenarchus (and his Peripatetic colleagues) in mind. The assumption that the soul qua εἶδος is corporeal is evidence of Stoic influence (see e.g. Alex. *Mixt.* 226.10–14 = *SVF* 2.1047), and is of course at odds with the views of Aristotle and Alexander.

But it is also possible that Xenarchus' view was considered by A to be a compromise position between corporeal and incorporeal and therefore quoted at the end of the series of corporealist monists, see Mansfeld (1990a) 3093. For Alexander's view that the soul supervenes upon the blend of the corporeal elements see Donini (1970).

§11 The references to the perceptive part (αἰσθητικόν) and perception (αἴσθησις) anticipate the treatment of αἴσθησις in chs. (4.4 and) 4.8–12. The reference to the *pneuma* as causing movement is the only mention of movement in the present chapter, while in the previous chapter this concept plays a quite

important part (explicitly at 4.2.1–5). The first Lucretian text quoted at section E(b)§11 is closer to Aristotle's description of Democritus' view cited there, §5, than to Epicurus' doctrine.

Pace Scalas (2015), Hippolytus' testimony that the soul according to Epicurus consists of blood is just one of his inaccuracies.

§§12–13 The Empedocles doxa as transmitted by T alone, which has the soul consist of a blend of the fiery and the aerial element, is unique. A blend of an aetherial and an airy substance is only attested for the moon, see Philo *Somn.* 1.145 (*SVF* 2.674), *κράμα ... ἔκ τε αἰθερώδους οὐσίας καὶ ἀερώδους*; for the doctrine cf. ch. 2.25.4, the moon as *μικτὴν ἐκ πυρὸς καὶ ἀέρος*. The other secondary evidence attributes to Empedocles (and sometimes to Critias as well) the tenet that the soul is blood. In the Empedocles doxa at ch. 4.5.8 the regent part is said to be blood, which flatly contradicts the doxa of ch. 4.3.12 as transmitted by T. We believe that the way out is to emend the text, following Diels' emendation in DK (not in the *DG*) of a similarly mutilated Empedocles lemma at P 5.25.4 (quoted above among the *Loci Aetiani*), and to add the watery and earthy components. This emendation of P 5.25.4 has been missed by Mau and Lachenaud. It has been noticed and rejected by others, who however are unaware of the presence of the word *ἀερώδους* at ch. 4.3.12 and have neglected the latter lemma. For *ἀερώδης* in Empedoclean doxai see also chs. 4.22.1 and 5.15.3, and for all the adjectives at ch. 5.25.4. The contradiction with ch. 4.5.8 now disappears, when we recall that according to Empedocles as reported by Theophrastus (*Sens.* 10–11) the blood 'we chiefly think with' consists of a blend of the (four) elements (*κεκράσθαι τὰ στοιχεῖα*), that according to the verbatim fragment 31B05.3 DK this blend will be most perfect in the region of the heart, and that according to another verbatim fragment (31B109 DK) 'we see earth with earth, water with water, shining aether with aether, but destroying fire with fire, love with love, and sorry strife with strife'. The latter is paraphrased by Theophrastus (*Sens.* 10, 'listing how we recognize each with each'), who quotes 31B107 as its sequel. Aristotle *de An.* 1.2 404b13–15, who quotes B109 in full, introduces the lines with the words 'Empedocles thought that the soul is *composed of all the elements* (*ἐκ τῶν στοιχείων πάντων*, our emphasis), and believes that each of these is a soul' (i.e. that each has a cognitive capacity). We may safely assume that the lemma (as restored above) derives from this Aristotelian introduction and Theophrastean discussion of what is Empedocles' original doctrine. The corporeal Empedoclean soul here figures as a blend of the physical elements, that is, of the famous 'four'.

We assume that T just omitted the two heavier elements, which perhaps he found insufficiently psychic. Or perhaps a partly parallel Pythagorean tenet in the *Pythagorica Hypomnemata* at Diogenes Laertius *V.P.* 8.28 may help explain

the omission. This makes the soul a blend of warm and cold aither: εἶναι δὲ τὴν ψυχὴν ἀπόσπασμα αἰθέρος καὶ τοῦ θερμοῦ καὶ τοῦ ψυχροῦ. Also compare a rather late passage, ps.Galen (i.e. Porphyry) *Ad Gaurum* ch. 11.3, who says that the soul upon entering the body may have attracted and so brings along ‘something aetherial or pneumatic or airy’ (διὰ τὸ εἶναι ἐγκόσμιος ἐφέλκοιτό τι σῶμα αἰθερώδεις ἢ πνευματώδεις ἢ ἀερώδεις). However this may be, we may safely restore the text of A, mutilated by T, by means of Diels’ emendation of the lemma in P 5.25.

The doxa attributed to Critias in T alone is singular too, for in a ‘blend of blood and moisture’ the moisture seems to be superfluous. Presumably what we have here is a fabricated doxa. That the name-labels Empedocles and Critias are cited together is paralleled in those doxographical passages where the same tenet is attributed to both, viz. Galen *PHP* 2.8.47, αἱμά ... τὴν ψυχὴν, ὡς Ἐμπεδοκλῆς καὶ Κριτίας ὑπέλαβον, and Macrobius in *Somn.* 1.14.20, *Empedocles et Critias sanguinem*. John Philoponus in *de An.* 9.19–21 notoriously even goes so far as to attribute Empedocles fr. B105.3 DK to Critias.

§14 Polito’s suggestion (2014) 336 that this passage attributes to Heraclitus the exhalation of soul from blood and seawater is too specific.

One of the ancestors of §14 Heraclitus is Aristotle’s relatively modest note on the Ephesian at *de An.* 1.2 405a25–27, ‘and Heraclitus says the principle is soul, since it is the evaporation (ἀναθυμίασις) from which he constructs the other things; and it is most incorporeal and forever streaming’. Note that at *de An.* 1.5 411a7–8, ‘and some say that it is intermingled in the universe, which presumably is why Thales though all things are full of gods’, he does not mention Heraclitus among those who think so (see above, ch. 4.2, Commentary D(d)§1). But we may believe that he has him in mind, and also thinks of Diogenes of Apollonia, whose air is mentioned *de An.* 1.2 405a21–24 immediately before the passage about the exhalation as the principle of soul in Heraclitus, and whose role as principle of all things and as the cause that makes the soul possess knowledge is attested for us e.g. at 64B4 DK, ‘humans and the other living being live by breathing in the air, and that is for them both soul and thought’. Theophrastus said of Diogenes that ‘the air inside perceives as it is a portion of the god’ (μόριον τοῦ θεοῦ, *Sens.* 42), see Burkert (2011) 474. Presumably Aristotle also has Democritus in mind, whose view that the outside air contains soul particles which we inhale when breathing is described both at *de An.* 1.4 403b31–404a16 and *Resp.* 4 471b30–472a26. He goes on to argue against the view that soul pervades the universe, *de An.* 1.5 411a9–13: ‘why does the soul fail to create a living being when it is in air or fire, but does so only when in a mixture of elements—and one also may wonder why soul in air is purer and less mortal than that in living beings’. This makes it all the more interesting that at *De generatione animalium* 3.11 762a18–

21, explaining spontaneous generation, he says that ‘in a way all things are full of soul (τρόπον τινὰ πάντα ψυχῆς εἶναι πλήρη), since animals and plants are formed in the earth and in the water because in earth water is present, and in water *pneuma* is present, and in all *pneuma* soul-heat is present’. The contradiction is perhaps weakened by the fact that in the latter passage the elements are mixed. On this mysterious *pneuma* and the difficulties of Aristotle’s view see Kullmann (2007) 422 and esp. (2014) 222–226.

For *anathymiasis* and the relation of soul to moisture one should compare the difficult fragments Heraclitus 22B36 DK, ‘for souls it is death that water is born, for water death that earth is born, and from earth water is born, and from water a soul’, and 22B12 DK, transmitted by AD on Cleanthes on Zeno (AD fr. 39 Diels, *SVF* 1.141 and 1.519), esp. the final clause of its Heraclitean ingredient: ‘souls too are evaporated from the moistures’.

Matters paradoxically become clearer the farther away from Heraclitus one gets. The first text that is close to §14, though it by no means speaks of a World Soul or of a Soul of the Whole or the All, tells us that according to some of his followers (note the τινές) ‘the exhalation in the body occurs in the same way as in the cosmos’, ps.Aristotle *Probl.* 13.6 908a30–31, ‘just as some of Heraclitus’ followers say that evaporation occurs, just as in the Whole, so also in the body’ etc. (fr. 66 (f³) Marcovich). What we have here is already a *Heraclitus interpretatus*, and this group of followers may well be later than Aristotle. The term World Soul (§14 τὴν ... τοῦ κόσμου ψυχὴν) is not found in the parallel to §14 in Nemesius, who however has the equivalent formula first found Plato *Tim.* 41d4–5, and then, in our context, in the Heraclitus lemma at A 4.7.2, viz. τὴν ... τοῦ παντὸς ψυχὴν. The attribution to Heraclitus of something like a Soul (or soul) beyond the body, or rather of a ‘regent part’ that is ‘outside’, is found Tertullian *de An.* 15.4, ‘that you refrain from believing that this regent part operates outside (as) according to Heraclitus’, so this was already a part of the Heraclitus material in the earlier doxographical tradition. Sextus Empiricus *M.* 7.349, ‘others believe that (the understanding) is outside the body, like Aenesidemus according to Heraclitus’ (fr. B24A Polito), specifies that this interpretation is linked with Aenesidemus. Also see *M.* 7.129–134 (fr. B29 Polito), which attributes to Heraclitus the view that we become intelligent by breathing in the Divine *Logos*, in a passage often believed to derive from Aenesidemus.

In our present context we do not have to analyse the development of this interpretative attitude, but may observe that its various instances are not so easily harmonized. See e.g. Waszink (1947) 227; Mansfeld (1990a) 3066 with n. 18, 3164 with n. 517, 3166, also on Aenesidemus; Polito (2004) and Betegh (2007), who deal with Heraclitus’ soul-stuff outside the human body; general overview of Aenesidemus on Heraclitus on soul at Polito (2014) 320–331, 335–

339; and Mansfeld (2015c). Ch. 4.7.2 should also be compared; this tenet goes a significant step further by speaking of a return of Heraclitean souls to the Soul of the All. Though according to the verbatim fragments of Heraclitus there is something out there that is both dominant and rational (e.g. 22B32, B64 DK), the uninhibited use of the concept of a World Soul, of which human souls are parts, shows the mark of an *interpretatio Stoica*. See also Calcidius in *Tim.* c. 251 (*SVF* 2.1198), ‘with the Stoics’ consent Heraclitus links our reason with the divine reason’.

The affinity between human souls and a super-Soul is indeed attested abundantly for the Stoics, and the return of the souls to this super-Soul (as at 4.7.2) is also explicitly attributed to some among them, see AD fr. 39 Diels (*SVF* 2.821), ‘they say there is a Soul in the Whole, which they call aether and air, surrounding in a circle land and sea and exhaled from these [...]. Some say that the Soul of the Whole is everlasting, and that in the end the rest are commingled with it’. These ‘some’, presumably, are Cleanthes and his followers, for according to Cleanthes all souls survive until the *ekpyrosis*, while Chrysippus accorded this privilege only to the souls of the wise, Diogenes Laertius *V.P.* 7.157 (*SVF* 1.522 = 2.811). For the affinity and the parts (not the return) see also Diogenes Laertius *V.P.* 7.156 (*SVF* 2.774), ‘it (sc. the animal soul) is destructible, but that of the Whole, of which those in living beings are parts, is indestructible’.

At ch. 4.3.14 (and 4.7.2) the human soul is said to be *ὁμογενῆ*, ‘of the same kind’ as that of the cosmos. Although one of the questions formulated by Aristotle *de An.* 1.1 402b1–3 is ‘whether every soul is of the same kind (πότερον ὁμοειδὴς ἅπασα ψυχῇ) or not; and if not, whether the difference is one of species (εἶδει) or of genus (γένει)’, the context shows that he does not think of human souls in relation to a super-Soul, but of the different souls of various species of animals, of that of man, of a god (and surely even of plants), and esp. of the three main types of soul: vegetative, aesthetic, rational. See Aristotle *de An.* 2.3 414a29–b33, and Alexander *de An.* 16.18–17.1; the three types of soul are not ὁμοειδεῖς.

e Other Evidence

Nem *NH* c. 2, p. 17 10–14 provides a further elaboration of §14, distinguishing between (1) those who speak of a single soul of all things that fragments itself into individual beings and comes together again towards itself, as do the Manichaeans and others, (2) those who say there are many souls, different as to species (e.g. Aristotle), and (3) those who say there is one soul as well as many (sc. Plato, see *NH* p. 33.20 Morani).

We should also refer to a series of Stoic syllogisms in Tertullian—attributed to Zeno, Cleanthes, and Chrysippus—that follow paragraphs dealing with the

various doxai concerned with the incorporeality vs. the corporeality of the soul. These syllogisms prove to Tertullian's satisfaction that the soul is corporeal. There are important parallels in Nem, who however argues in some detail in favour of the incorporeality of the soul. At Tert. *de An.* 5.1–2 we have two series of doxai corresponding to those at A 4.2–3 (in that order), immediately followed, at *de An.* 5.3–6, by four Stoic syllogisms (~ *SVF* 1.137: Zeno; *SVF* 1.518: Cleanthes, two syllogisms; *SVF* 2.791: Chrysippus). In Nemesius' much longer account we have two series of doxai corresponding to those at A 4.3–2 (in the order as reversed by him) at *NH* p. 16.12–17.10, followed at some distance by the two syllogisms of Cleanthes and that of Chrysippus, announced p. 20.12–14: Cleanthes at p. 20.14–17 + 21.6–9 (~ *SVF* 1.518), Chrysippus at p. 22.3–6 (~ *SVF* 1.137, 2.790). The conclusion in our view can only be that both Tertullian and Nemesius derive from an *uberior fons*, that is, from an earlier representative of the doxographical tradition, which had already been updated by the insertion of Stoic syllogisms as an appendix to a plurilemmatic chapter on the corporeality of the soul, just as A is updated by the addition of the two Stoic chapters 4.11–12 after 4.9–10.

Similar Stoic *Wandersyllogismen* are quoted elsewhere. A variety of Cleanthes' first argument is attributed to Panaetius at Cicero *Tusc.* 1.79 (T 120 Alesse); this is about the immortality not the (in)corporeality of the soul, two themes that are of course related, see, e.g. Cic. *Tusc.* 1.18–25, Macrobi. *in Somn.* 1.14.20 *obtinuit non minus de incorporalitate eius quam de immortalitate sententia*, Aug. *Trin.* 10.vii.17–25, Gal. *Propr.Plac.* 3.1, 7.1, 7.4, καθάπερ οὖν (οὐ χρήσιμον) ἱατρῶ πε(ρὶ τοῦ)το γινώσκειν εἴτ' ἀθάνατός ἐστιν ἢ ψυχὴ εἴτ' οὐκ ἀθάνατος ..., οὕτω καὶ περὶ τῆς οὐσίας αὐτῆς εἴτ' ἀσώματός ἐστιν παντάπασιν ... εἴτε σωματοειδῆς κτλ. Arguments concerned with corporeality are cited anonymously and briefly at Alexander of Aphrodisias *de An.Mant.* 117.9–11 (corresponding to the second syllogism of Cleanthes) and 117.21–23 (corresponding to that of Chrysippus), cf. *SVF* 2.792. Such syllogisms are also cited much later at Calc. *in Tim.* c. 220: one attributed to Zeno (~ *SVF* 1.138), but corresponding to that of Chrysippus, and one attributed to Chrysippus (not in *SVF*). The context in ps.Alexander is not doxographical, that in Calcidius only to some extent. The quotations concerning the corporeality of the soul in ps.Alexander and Calcidius, which differ among themselves, may derive from a handbook. A handbook may also have been the source of a doxographical predecessor of A used by Tertullian and Nemesius. See further Waszink (1947) 127–129, Dörrie (1959) 131–140, Sharples (2008) 162–164, and for an overview of various suggestions concerning the sources issue Sharples–Van der Eijk (2008) 57 n. 277. In our view the varieties of attribution, formulation, and scope suggest the influence of intermediary sources, but to some extent they also depend on the aims of the quoting authors.

§3 **Stoics: Chrysippus de An.** I at Gal. *PHP* 3.1.10 (SVF 2.885, verbatim) ἡ ψυχὴ πνεῦμά ἐστι σύμφυτον ἡμῖν συνεχὲς παντὶ τῷ σώματι διήκον ἔστ' ἂν ἡ τῆς ζωῆς εὐπνοία παρῇ ἐν τῷ σώματι. **Seneca Nat.** 7.25.2 *alius illum dicet spiritum esse*. **Doxography C** (attributed to AD) at Stob. *Ecl.* 2.7.5b7, p. 64.21–23 (SVF 3.305) τὴν γὰρ διάνοιαν καὶ τὴν ψυχὴν σῶμα εἶναι· τὸ γὰρ συμφυὲς πνεῦμα ἡμῖν ἐνθερμον ὃν ψυχὴν ἡγούνηται. **Galen QAM** c. 4, 784.10–12 K. ἡ τῆς ψυχῆς οὐσία κατὰ ποιὰν κράσιν ἀέρος τε καὶ πυρὸς γίγνεται κατὰ τοὺς Στωϊκοὺς (SVF 2.787). *PHP* 7.3.19 εἰ δὲ σῶμα, τοῦτ' αὐτὸ πνεῦμα τὴν ψυχὴν εἶναι. *in Epid.* vi p. 273.2.1–6 Wenkebach–Pfaff τοῖς Στωϊκοῖς (SVF 2.715) δ' ἔθος ἐστὶ φύσιν μὲν ὀνομάζειν, ἢ τὰ φυτὰ διοικεῖται, ψυχὴν δὲ ἢ τὰ ζῶα, τὴν οὐσίαν ἀμφοτέρων μὲν τίθεται τὸ σύμφυτον πνεῦμα καὶ διαφέρειν ἀλλήλων οἶονται ποιότητι· ξηρότερον μὲν γὰρ πνεῦμα τὸ τῆς ψυχῆς, ὑγρότερον δὲ τὸ τῆς φύσεως εἶναι. *Propr.Plac.* 7, p. 179.18–19 Boudon–Millot–Pietrobelli, text Lami εἴτε σωματοειδὴς ὡς ὁ Χρύσιππος οἶεται, πνεῦμα μὲν ἀποφηνάμενος αὐτὴν εἶναι. *Propr.Plac.* 14, p. 188.1 Boudon–Millot–Pietrobelli, text Lami (= *Sub.Nat.Fac.* 4.761.4 K.) τινὲς δὲ πνεῦμα. *SMT* 11.731.3–6 K. οἱ μὲν οὖν Στωϊκοὶ (SVF 2.777) ταῦτόν τοῦτο τὸ πνεῦμα τὴν οὐσίαν τῆς ψυχῆς εἶναι δοξάζουσιν· ἡμεῖς δὲ περὶ οὐσίας ψυχῆς οὔτε πάννυ τι τολμῶμεν ἀποφαίνεσθαι καὶ πρὸς τὰ παρόντα περιττὸν ὑπολαμβάνομεν. **Hierocles ELeth.** col. 3.56–61 Bastianini–Long πρῶτον [το]ῖνυ οὐκ ἀγνοητέον ὡς, | καθάπε[ρ] τὸ σῶμα τοῦ ζ[ώ]ου θικτόν ἐστι, ἵν' οὕτως εἴπω, καὶ | ἀπτόν, οὕτως οἶνυ καὶ ἡ [ψ]υχὴ· καὶ γὰρ αὕτῃ τοῦ γένους ἐστὶ τῶν σω-|μά[των]—ἀλλ' [ἐ]ν [τοῖς] οἰκείοις τοῦτο παρίσταται λό[γοις] ἀν[η]κ[έ]σ[το]ς ἀποφαίνουσι τὰς τῶν ἄλλων | ὑ[πὲρ] τῆς ψ[υχῆς] ἀτο[πίας] λε[γόν]των φοράς. **Alexander of Aphrodisias de An.** 26.16–17 οἱ τε ἀπὸ τῆς Στοᾶς (SVF 2.786), πνεῦμα αὐτὴν λέγοντες εἶναι συγκεϊμένον πως ἔκ τε πυρὸς καὶ

ἀέρος. **Alexander of Aphrodisias**(?) *de An.Mant.* 115.6–7 (SVF 2.785) ἔτι εἰ ἡ ψυχὴ σῶμα, ἢ πῦρ ἢ πνεῦμα λεπτομερές ἐστι διὰ παντός διήκον τοῦ ἐμψύχου σώματος. **Plotinus Enn.** 4.7.[2].3–8 passim. **Porphyry de An. adv. Boeth.** (fr. 249F Smith) at Eus. *PE* 15.11.4 (SVF 2.806) πῶς δὲ οὐκ αἰσχύνῃς γέμων ὁ πνευμά πως ἔχον αὐτὴν ἀποδιδούς ἢ πῦρ νοερόν; **Diogenes Laertius V.P.** 9.19 (on Xenophanes!, 21A1 DK) πρῶτός τε ἀπεφάνητο ὅτι ... ἡ ψυχὴ πνεῦμα. **Cassiodorus de An.** c. 10.1–7 Halporn *De qualitate animae. qualitatem itaque substantiae huius auctores igneam esse dixerunt propterea quod mobili semper ardore vegetetur et iuncta corpori calore suo membra vivificet. deinde quod cuncta caelestia flammis referunt vigore constare, non isto fumeo, consumptibili, et temporali, sed ex tranquillo nutritoque atque immortali.*

§4 Parmenides Hippasus Heraclitus: Theophrastus Sens. 3 Παρμενίδης (28A46 DK) μὲν γὰρ ὅλως οὐδὲν ἀφώρικεν ἀλλὰ μόνον, ὅτι δυοῖν ὄντων στοιχείοι κατὰ τὸ ὑπερβάλλον ἐστὶν ἡ γνῶσις. ἐὰν γὰρ ὑπεραίρη τὸ θερμὸν ἢ τὸ ψυχρόν, ἄλλην γίνεσθαι τὴν διάνοιαν, βελτίω δὲ καὶ καθαρωτέραν τὴν διὰ τὸ θερμόν. **Sextus Empiricus M.** 7.130 (cf. Aenesidemus B29 Polito) ἡ ἐπιξενωθείσα τοῖς ἡμετέροις σώμασιν ἀπὸ τοῦ περιέχοντος μοῖρα. **John Philoponus in de An.** 9.7–9 οἱ δὲ πῦρ, ὡς Ἡράκλειτος (T 969 Mouraviev), ἐπειδὴ καὶ πῦρ ἔλεγεν εἶναι τὴν ἀρχὴν τῶν ὄντων· οὕτως οὖν καὶ τὴν ψυχὴν πυρίαν εἶναι διὰ τὸ εὐκίνητον.

§5/§11 Democritus Epicurus: Papyrus Genevenses inv. 203, B27–29 at *CPF* I.1** p. 6 Democritus 2T σῶμα ἔφασ[αν οἱ περὶ Ἐπίκουρον, καὶ ὁ] | Δημόκριτος [ὁμο]ίως σ[υ]κ[ρ]ιν[ο]μέν[ων ἰ]δεῶν σῶμ[α αὐτῇ]ν (sc. τὴν ψυχὴν) εἶπ[εν]. **Iamblichus de An.** fr. 2 Finamore–Dillon at Stob. *Ecl.* 1.49.32, p. 363.16–17 ἀπὸ δὴ τῶν σφαιροειδῶν ἀτόμων εἶναι τὴν ψυχὴν.

§5 Democritus: Aristotle de An. 1.2 403b31–404a2 Δημόκριτος (fr. 443a Luria) μὲν πῦρ τι καὶ θερμόν φησιν αὐτὴν εἶναι· ἀπείρων γὰρ ὄντων σχημάτων καὶ ἀτόμων τὰ σφαιροειδῆ πῦρ καὶ ψυχὴν λέγει. *Resp.* 4 472a4–6 (Democritus, 68A106 DK) λέγει δ' ὡς ἡ ψυχὴ καὶ τὸ θερμόν ταύτόν, τὰ πρῶτα σχήματα τῶν σφαιροειδῶν. **Theophrastus Sens.** 58 (on Democritus, 68A135 DK) φανερόν, ὅτι τῇ κράσει τοῦ σώματος ποιεῖ τὸ φρονεῖν, ὅπερ ἴσως αὐτῷ καὶ κατὰ λόγον ἐστὶ σῶμα ποιοῦντι τὴν ψυχὴν. **Diogenes Laertius V.P.** 9.44 (on Democritus, 68A1 DK) τὸν τε ἥλιον καὶ τὴν σελήνην ἐκ τοιούτων λείων καὶ περιφερῶν ὄγκων συγκεκρίσθαι, καὶ τὴν ψυχὴν ὁμοίως. (differently *Scholia in Epicurum Ep.Hdt.* 66 at D.L. *V.P.* 10.66 λέγει (fr. 311 Usener) ἐν ἄλλοις καὶ ἐξ ἀτόμων αὐτὴν συγκεῖσθαι λειοτάτων καὶ στρογγυλωτάτων, πολλῶ τινι διαφερουσῶν τῶν τοῦ πυρός.) **Porphyry de An. adv. Boeth.** (fr. 249F Smith) at Eus. *PE* 15.11.4 πῶς δὲ οὐκ αἰσχύνῃς γέμων ... ὅ τε ἀτόμων ἄθροισμα θεῖς; **John Philoponus in de An.** 9.16–19 τῶν δὲ σύνθετον σῶμα ὑπειληφότες οἱ μὲν ἐξ ἀσυνάπτων στοιχείων, ὡς Δημόκριτος καὶ Λεύκιππος (—) καὶ ἀπλῶς οἱ τὰ ἄτομα εἰσάγοντες· ἔλεγον μὲν γὰρ ἀρχὰς τῶν ὄντων τὰ ἄτομα καὶ τὸ κενόν· εἶναι οὖν τὴν ψυχὴν ἐκ σφαιρικῶν ἀτόμων διὰ τὸ εὐκίνητον.

§6 Heraclides: Plutarch Lat. Viv. 1130B (Heraclides Ponticus fr. 100 Wehrli, 48 Schütrumpf) αὐτὴν τε τὴν ψυχὴν ἔνιοι τῶν φιλοσόφων φῶς εἶναι τῇ οὐσίᾳ νομίζουσιν κτλ. **Clement of Alexandria Paed.** 2.2.29.3 οὕτω δ' ἂν καὶ ἡ ψυχὴ ἡμῶν ὑπάρξαι καθαρὰ καὶ ξηρὰ καὶ φωτεινὴ, ἀυγὴ δὲ ψυχὴ ξηρὰ σφωτάτη καὶ ἀρί-

στη' (Heraclitus fr. 68 (a⁷) Marcovich). **John Philoponus** in *An.* 9.5–7 τῶν δὲ ἀπλοῦν σώμα εἰρηκότων τὴν ψυχὴν εἶναι οἱ μὲν εἰρήκασιν αἰθέριον εἶναι σώμα, ταῦτόν δὲ ἐστὶν εἰπεῖν οὐράνιον, ὥσπερ Ἡρακλείδης ὁ Ποντικός (fr. 99 Wehrli, 47 Schütrumpf).

§§8–9 **Diogenes of Apollonia Hippo: Simplicius** (? perhaps Priscianus Lydus) in *de An.* 32.16–20 ἐτίθετο μὲν καὶ Θαλῆς (fr. 423 Wöhrlé) ὕδωρ τὸ στοιχεῖον, ἀλλὰ σωμάτων, καὶ οὐχὶ τὴν ψυχὴν πάντως σώμα ᾤετο. (τὸν) δὲ Ἴππωνα ... φορτικὸν καλεῖ οὐ μόνον ὡς παχυμερέστερον αὐτὴν λέγοντα στοιχεῖον κτλ.

§8 **Diogenes of Apollonia: Aristotle** *de An.* 1.2 405a21–22 Διογένης (64A20 DK) δ' ὥσπερ καὶ ἕτεροί τινες ἀέρα.

§9 **Hippo: Aristotle** *de An.* 1.2 405b1–3 τῶν δὲ φορτικωτέρων καὶ ὕδωρ τινὲς ἀπεφώνησαν, καθάπερ Ἴππων· πεισθῆναι δ' εἰκόσιν ἐκ τῆς γονῆς, ὅτι πάντων ὑγρά. **John Philoponus** in *de An.* 9.10–12 οἱ δὲ ἐξ ὕδατος, ὡς Θαλῆς (fr. 440 Wöhrlé) καὶ Ἴππων (—) ὁ ἐπὶ κλην ἄθεος· ἐπειδὴ γὰρ τὴν γονὴν ἐώρων ἐξ ὑγρᾶς οὕσαν οὐσίαν, διὰ τοῦτο καὶ ὕδωρ τὴν ἀρχὴν τῶν ὄντων ἐνόμισαν. differently in *de An.* 86.23–34 οὐ γὰρ εἶπε φέρ' εἰπεῖν ὅτι Θαλῆς (—) τὸ ὕδωρ ψυχὴν τίθεται καὶ διὰ τοῦτο ἔλκειν φησὶ τὸν σίδηρον τὴν λίθον ὡς ἔμψυχον καὶ διὰ τοῦτο ἐξ ὕδατος οὕσαν. ... διὰ ταῦτα τούτου μὲν οὐ λέγει εἶναι τὴν δόξαν ταύτην ὅτι ἐξ ὕδατος ἡ ψυχὴ, ἀλλὰ τοσοῦτον μόνον ὅτι καὶ αὐτὸς τὴν κίνησιν τῇ ψυχῇ ἀπένειμεν. ἐφεξῆς δὲ Ἴππωνά (—) φησι τοῦτο δοξάσαι ὅτι ἐξ ὕδατος ἡ ψυχὴ· καὶ γὰρ τῶν πάντων ἀρχὴν καὶ αὐτὸς ἔλεγε τὸ ὕδωρ.

§10 **Xenarchus Peripatetics: Galen** *PHP* 7.7.25 εἰ δὲ καὶ περὶ ψυχῆς οὐσίας ἀποφώνασθαι χρή, δυοῖν θάτερον ἀναγκαῖον εἰπεῖν· ἢ τοῦτ' εἶναι τὸ οἶον αὐγοειδὲς τε καὶ αἰθερώδες σώμα λεκτέον αὐτὴν, εἰς δ' καὶ μὴ βούλωνται κατ' ἀκολουθίαν ἀφικνούνται Στωϊκοί (—) τε καὶ Ἀριστοτέλης, ἢ αὐτὴν μὲν ἀσώματον ὑπάρχειν οὐσίαν, ὅχημα δὲ τὸ πρῶτον αὐτῆς εἶναι τοῦτ' ὃ τὸ σώμα δι' οὐ μέσου τὴν πρὸς τὰλλα σώματα κοινωνίαν λαμβάνει. **Alexander of Aphrodisias** *de An.* 16.4–6 τὸ δὲ εἶδος, οὐ ἐστὶν εἶδος, ἐδείχθη καὶ τελειότης ὄν, ἔθος δὲ Ἀριστοτέλει τὴν τελειότητα καὶ ἐντελέχειαν λέγειν. cf. *de An.* 17.12–13. *de An.* 23.30–24.1. **Alexander of Aphrodisias**(?) *de An.Mant.* 103.2–4 ψυχὴ ἄρα ἐστὶν ἡ κατὰ τὸ εἶδος οὐσία. τὸ δὲ εἶδος τελειότητά τε καὶ ἐντελέχειαν ὁ Ἀριστοτέλης λέγει. **Plotinus** *Enn.* 4.7.[2].85.1–50.

§11 **Epicurus: Epicurus** *Ep.Hdt.* at D.L. 10.63 ἡ ψυχὴ σώμα ἐστὶ λεπτομερές ... προσεφερέστατον δὲ πνεύματι θερμοῦ τινα κράσιν ἔχοντι καὶ πῆ μὲν τούτῳ προσεφερές, πῆ δὲ τούτῳ· ἔστι δὲ τι μέρος πολλὴν παραλλαγὴν εἰληφὸς τῇ λεπτομερείᾳ καὶ αὐτῶν τούτων, συμπαθεῖ δὲ τοῦτο μᾶλλον καὶ τῷ λοιπῷ ἀθροίσματι· τοῦτο δὲ πᾶν αἰ δυνάμεις τῆς ψυχῆς δηλοῦσι καὶ τὰ πάθη καὶ αἰ εὐκίνησαι καὶ αἰ διανοήσεις. **Lucretius** *DRN* 3.203–205 *nunc igitur quoniamst animi natura reperta / mobilis egregie, perquam constare necessest / corporibus parvis et levibus atque rutundis.* *DRN* 3.231–242 *nec tamen haec simplex nobis natura putanda est, / tenuis enim quaedam moribundos deserit aura / mixta vapore, vapor porro trahit aëra secum; / ... / (237) iam triplex animi est igitur natura reperta; / nec tamen haec sat sunt ad sensum cuncta creandum, / nil horum quoniam recipit mens posse creare / sensiferos motus et quae quis [Smith, alii alia: quaedam*

codd.] *mente volutat. / quarta quoque his igitur quaedam natura necessest / adtribuatur; east omnino nominis expers.* DRN 3.269–272. **Plutarch** *Adv. Col.* 1118D–E (Epicurus fr. 315 Usener) τὴν οὐσίαν συμπηγνύντες αὐτῆς ἐκ τινος θερμοῦ καὶ πνευματικοῦ καὶ ἀερῶδους οὐκ ἐξικνούνται πρὸς τὸ κυριώτατον ἀλλ’ ἀπαγορεύουσι· τὸ γὰρ ᾧ κρίνει καὶ μνημονεύει καὶ φιλεῖ καὶ μισεῖ, καὶ ὅλως τὸ φρόνιμον καὶ λογιστικὸν ἐκ τινός φησιν ‘ἀκατονομάστου’ ποιότητος ἐπιγίνεσθαι. **Alexander of Aphrodisias** *de An.* 26.17–18 καὶ οἱ περὶ Ἐπίκουρον (—)· καὶ γὰρ κατ’ ἐκείνους σύνθετος ἡ ψυχὴ ἐκ πλειόνων τινῶν καὶ διαφερόντων σωμάτων.

§12 Empedocles: Aristotle *de An.* 1.2 404b11–15 Ἐμπεδοκλῆς (31B109 DK) μὲν ἐκ τῶν στοιχείων πάντων (sc. τὴν ψυχὴν), εἶναι δὲ καὶ ἕκαστον ψυχὴν τούτων, λέγων οὕτως: ‘γαίῃ μὲν γὰρ γαίαν ὁπώπαμεν, ὕδατι δ’ ὕδωρ, / αἰθέρι δ’ αἰθέρα διαν, ἀτὰρ πυρὶ πῦρ αἰδηλον’. **Sextus Empiricus** *M.* 7.115–116 Ἐμπεδοκλῆς δὲ ὁ Ἀκραγαντίνος (—) κατὰ μὲν τοὺς ἀπλούστερον δοκοῦντας αὐτὸν ἐξηγεῖσθαι ἐξ κριτήρια τῆς ἀληθείας παραδίδωσιν. δύο γὰρ δραστηρίους τῶν ὅλων ἀρχὰς ὑποθέμενος, Φιλίαν καὶ Νείκος, ἅμα τε τῶν τεσσάρων μνησθεὶς ὡς ὑλικῶν, γῆς τε καὶ ὕδατος καὶ ἀέρος καὶ πυρός, πάντων ταῦτα ἔφη κριτήρια τυγχάνειν. (116) παλαιὰ γὰρ τις ... ἄνωθεν παρὰ τοῖς φυσικοῖς κυλεῖται δόξα περὶ τοῦ τὰ ὅμοια τῶν ὁμοίων εἶναι γνωριστικά. *M.* 7.121 cites Empedocles 31B109 DK. **Empedocles** 31B105.3 DK αἷμα γὰρ ἀνθρώποις περικάρδιόν ἐστι νόημα. **Theophrastus** *Sens.* 10 (Empedocles 31A86 DK) τῷ αἵματι μάλιστα φρονεῖν· ἐν τούτῳ γὰρ μάλιστα κεκράσθαι {ἐστι} τὰ στοιχεῖα τῶν μερῶν. **Pythagorica Hypomnemata** at Alex. Polyh. fr. 9 Giannatasio Andria (Pythagorei 58B1a DK) at D.L. *VP.* 8.28 εἶναι δὲ τὴν ψυχὴν ἀπόσπασμα αἰθέρος καὶ τοῦ θερμοῦ καὶ τοῦ ψυχροῦ. **Diogenes Laertius** *VP.* 9.29 (on Zeno of Elea, 29A1 DK) γεγενῆσθαι δὲ τὴν τῶν πάντων φύσιν ἐκ θερμοῦ καὶ ψυχροῦ καὶ ξηροῦ καὶ ὕγρου, λαμβανόντων αὐτῶν εἰς ἄλληλα τὴν μεταβολήν· ... ψυχὴν κράμα ὑπάρχειν ἐκ τῶν προειρημένων (sc. θερμοῦ καὶ ψυχροῦ καὶ ξηροῦ καὶ ὕγρου) κατὰ μὴδενὸς τούτων ἐπικράτησιν.

§13 Critias: Plato *Phd.* 96b καὶ πότερον τὸ αἷμα (Empedocles 31A76 DK) ἐστὶν ᾧ φρονούμεν. **Aristotle** *de An.* 1.2 405b5–6 ἔτεροι δ’ αἷμα, καθάπερ Κριτίας (see also above §12). **Lucretius** *DRN* 3.43 *animi naturam sanguinis esse.* **Seneca** *Nat.* 7.25.2 *non deerit qui sanguinem dicat.* **Pythagorica Hypomnemata** at Alex. Polyh. fr. 9 Giannatasio Andria (Pythagorei 58B1a DK) at D.L. 8.30 τρέφεσθαι τε τὴν ψυχὴν ἀπὸ τοῦ αἵματος. **Galen** *PHP* 2.8.47 αἷμα φησιν εἶναι τὴν ψυχὴν, ὡς Ἐμπεδοκλῆς καὶ Κριτίας ὑπέλαβον (v. also *PHP* 2.8.48 below §14). **Plotinus** *Enn.* 4.7.[2].6.40 εἴτ’ οὖν εἰς αἷμα. **Simplicius** (? perhaps Priscianus Lydus) *in de An.* 32.22 ὁ δὲ τὸ αἷμα τὴν ψυχὴν θέμενος Κριτίας (—) εἶτε ὁ τῶν τριάκοντα γενόμενος εἰς εἶτε σοφιστὴς τις, οὐδὲν ἡμῖν διοίσει. **John Philoponus** *in An.* 9.19–21 οἱ δὲ ἐκ συνημμένων, ὡς Κριτίας ὁ εἰς τῶν τριάκοντα· αἷμα γὰρ ἔλεγεν εἶναι τὴν ψυχὴν· ‘αἷμα γάρ’, φησὶν, ‘ἀνθρώποις περικάρδιόν ἐστι νόημα’ (N.B. = Empedocles 31B105.3 DK).

§14 Heraclitus: Aristotle *de An.* 1.2 405a25–27 καὶ Ἡράκλειτος (T 189 Moutavriev) δὲ τὴν ἀρχὴν εἶναι φησι ψυχὴν, εἴπερ τὴν ἀναθυμίασιν, ἐξ ἧς τὰλλα συνίστησιν· καὶ ἀσωματώτατόν τε καὶ ῥέον αἰεὶ. **ps.Aristotle** *Probl.* 13.6 908a28–34 διὰ τί, ἐάν τις σκόροδα φάγη, τὸ οὖρον ὄζει, ἄλλων δὲ ἐχόντων ἰσχυράν ὁσμὴν οὐκ

ὄξει ἐδεσθέντων; πότερον, ὥσπερ τινὲς τῶν Ἡρακλειτιζόντων (Heraclitus 66 (*f*³) Marcovich) φασὶν ὅτι ἀναθυμιάται, ὥσπερ ἐν τῷ ὄλῳ, καὶ ἐν τῷ σώματι, εἴτα πάλιν ψυχθὲν συνίσταται ἐκεῖ μὲν ὑγρόν, ἐνταῦθα δὲ οὖρον, ἢ ἐκ τῆς τροφῆς ἀναθυμιάσις, ἐξ οὗ ἐγένετο αὕτη συμμιγνυμένη, ποιεῖ τὴν ὁσμὴν; αὕτη γὰρ ἐστίν, ὅταν μεταβάλλῃ. **Aristotle** *de An.* 1.5 410b27–30 τοῦτο δὲ πέπονθε καὶ ὁ ἐν τοῖς Ὀρφικοῖς καλουμένοις ἔπεσι (1B11 DK, 421(I) Bernabé) λόγος· φησὶ γὰρ τὴν ψυχὴν ἐκ τοῦ ὄλου εἰσιέναι ἀναπνεόντων, φερομένην ὑπὸ τῶν ἀνέμων. *de An.* 1.5 411a7–8 καὶ ἐν τῷ ὄλῳ δὴ τινες αὐτὴν μεμῖχθαι φασιν, ὅθεν ἴσως καὶ Θαλῆς (fr. 32 Wöhrlé) ᾤθη ἅπαντα πλήρη θεῶν εἶναι. *de An.* 1.2 404a1–13 (Democritus fr. 200 Luria) πῦρ τι καὶ θερμόν φησιν αὐτὴν (sc. τὴν ψυχὴν) εἶναι· ἀπείρων γὰρ ὄντων σχημάτων καὶ ἀτόμων τὰ σφαιροειδῆ πῦρ καὶ ψυχὴν λέγει (οἷον ἐν τῷ ἀέρι τὰ καλούμενα ξύσματα, ἃ φαίνεται ἐν ταῖς διὰ τῶν θυρίδων ἀκτίσιν), ... διὸ καὶ τοῦ ζῆν ὅρον εἶναι τὴν ἀναπνοήν· συνάγοντος γὰρ τοῦ περιέχοντος τὰ σώματα καὶ ἐκθλίβοντος τῶν σχημάτων τὰ παρέχοντα τοῖς ζῴοις τὴν κίνησιν διὰ τὸ μὴδ' αὐτὰ ἡρεμεῖν μηδέποτε, βοήθειαν γίνεσθαι θύραθεν ἐπεισιόντων ἄλλων τοιοῦτων ἐν τῷ ἀναπνεῖν. *de An.* 1.2 404a16–19 ἔοικε δὲ καὶ τὸ παρὰ τῶν Πυθαγορείων (58B.40 DK) λεγόμενον τὴν αὐτὴν ἔχειν διάνοιαν· ἔφασαν γὰρ τινες αὐτῶν ψυχὴν εἶναι τὰ ἐν τῷ ἀέρι ξύσματα, οἱ δὲ τὸ ταῦτα κινοῦν. *Resp.* 4 472a6–11 (68A106 DK) ἐν γὰρ τῷ ἀέρι πολλὸν ἀριθμὸν εἶναι τῶν τοιούτων ἃ καλεῖ ἐκείνος νοῦν καὶ ψυχὴν· ἀναπνεόντος οὖν καὶ εἰσιόντος τοῦ ἀέρος συνεισιόντα ταῦτα καὶ ἀνείργοντα τὴν θλίψιν κωλύειν τὴν ἐνοῦσαν ἐν τοῖς ζῴοις διέναι ψυχὴν, καὶ διὰ τοῦτο ἐν τῷ ἀναπνεῖν καὶ ἐκπνεῖν εἶναι τὸ ζῆν καὶ ἀποθνήσκειν. *GA* 3.11 762a18–21 γίνεται δ' ἐν γῇ καὶ ἐν ὑγρῷ τὰ ζῶα καὶ τὰ φυτὰ διὰ τὸ ἐν γῇ μὲν ὕδωρ ὑπάρχειν ἐν δ' ὕδατι πνεῦμα, ἐν δὲ τούτῳ παντὶ θερμότητα ψυχικὴν, ὥστε τρόπον τινὰ πάντα ψυχῆς εἶναι πλήρη. **Cleanthes** at *AD* fr. 39 Diels at *Eus. PE* 15.20.2–3 Κλεάνθης (*SVF* 1.519) ... φησιν ὅτι Ζήνων (*SVF* 1.141) τὴν ψυχὴν λέγει αἰσθητικὴν ἀναθυμιάσιν, καθάπερ Ἡράκλειτος· βουλόμενος γὰρ ἐμφανίσαι ὅτι αἱ ψυχαὶ ἀναθυμιώμεναι νοεραὶ αἰεὶ γίνονται, εἵκασεν αὐτάς τοις ποταμοῖς, λέγων οὕτως· 'ποταμοῖσι τοῖσιν αὐτοῖσιν ἐμβαίνουσιν ἔτερα καὶ ἔτερα ὕδατα ἐπιρρεῖ· καὶ ψυχαὶ δὲ ἀπὸ τῶν ὑγρῶν ἀναθυμίωνται' (22B12 DK). ἀναθυμιάσιν μὲν οὖν ὁμοίως τῷ Ἡρακλείτῳ τὴν ψυχὴν ἀποφαίνει Ζήνων, αἰσθητικὴν δὲ αὐτὴν εἶναι διὰ τοῦτο λέγει ὅτι τυποῦσθαί τε δύναται τὸ μέρος τὸ ἡγούμενον αὐτῆς ἀπὸ τῶν ὄντων καὶ ὑπαρχόντων διὰ τῶν αἰσθητηρίων καὶ παραδέχεσθαι τὰς τυπώσεις. **Diogenes of Babylon** at *Gal. PHP* 2.8.44 (*SVF* 3 *Diog.* 30, verbatim) 'τό' φησι 'κινοῦν τὸν ἄνθρωπον τὰς κατὰ προαίρεσιν κινήσεις ψυχικὴ τίς ἐστίν ἀναθυμιάσις, πᾶσα δὲ ἀναθυμιάσις ἐκ τῆς τροφῆς ἀνάγεται, ὥστε τὸ κινοῦν πρῶτον τὰς κατὰ προαίρεσιν κινήσεις καὶ τὸ τρέφον ἡμᾶς ἀνάγκη ἐν καὶ ταῦτόν εἶναι.' **Manilius** 4.884–885 ... *nostrumque parentem / pars sua perspicimus genitique accedimus astris*. **Seneca** *Dial.* 8.5.5 *an illud verum sit quo maxime probatur homines divini esse spiritus, partem ac veluti scintillas quasdam astrorum in terram desiluisse atque alieno loco haesisse*. **Plutarch** *Virt. Mor.* 441F ἢ τ' ἀνθρώπου ψυχὴ μέρος ἢ μίμημα τῆς τοῦ παντὸς οὐσα. *CN* 1084F–1085A (*SVF* 2.847) φαντασία γὰρ τις ἢ ἔννοια ἐστίν, φαντασία δὲ τύπωσις ἐν ψυχῇ· ψυχῆς δὲ φύσις ἀναθυμιάσις, ἣν τυπωθῆναι μὲν ἐργῶδες διὰ μανότητα δεξιμένην δὲ τηρῆσαι τύπωσιν ἀδύνατον. ἢ τε γὰρ τροφή καὶ ἡ γένεσις αὐτῆς ἐξ (1085A) ὑγρῶν οὐσα συνεχῇ τὴν ἐπιφορὰν ἔχει καὶ τὴν ἀνάλωσιν, ἢ τε πρὸς τὸν ἀέρα τῆς ἀνα-

πνοῆς ἐπιμιξία καινὴν αἰεὶ ποιεῖ τὴν ἀναθυμίασιν, ἐξισταμένην καὶ τρεπομένην ὑπὸ τοῦ θύραθεν ἐμβάλλοντος ὀχετοῦ καὶ πάλιν ἐξιόντος. **ps.Plutarch** *Hom.* 2 c. 127, 1406–1408 Kindstrand αὐτὴν δὲ ψυχὴν οἱ Στωικοὶ (—) ὀρίζονται πνεῦμα (ἡμῖν) συμφυὲς καὶ ἀναθυμίασιν αἰσθητικὴν, ἀναδιδομένην ἀπὸ τῶν ἐν τῷ σώματι ὑγρῶν. **Marcus Aurelius** 5.33 αὐτὸ δὲ τὸ ψυχάριον ἀναθυμιάσις ἀφ’ αἵματος. **Galen** *PHP* 2.8.48 εἰ δέ γε ἔπειτο (sc. Testes primi:

Theodoretus CAG 5.19–21 (CAG 5.16–17 vid. test. prim. ad c. 4.2)

5.19 (~ quaestio) καὶ μέντοι καὶ περὶ τὴν ταύτης διαίρεσιν πλείστη γε τοῦτοις γεγένηται διαμάχη.

5.19.1 (~ §1) Πυθαγόρας μὲν γὰρ καὶ Πλάτων διμερῆ ταύτην εἰρήκασιν, καὶ τὸ μὲν αὐτῆς εἶναι λογικόν, τὸ δὲ ἄλογον. διχῇ δ' αὖ πάλιν τὸ ἄλογον ἔτεμον, καὶ τὸ μὲν αὐτοῦ θυμικόν εἶναι, τὸ δὲ ἐπιθυμητικόν.

5.19.2 (~ §2) ὁ δὲ Ξενοκράτης, καὶ ταῦτα τρίτος ἀπὸ Πλάτωνος ὢν—Σπευσίππου γὰρ τοῦ Πλάτωνος ἀδελφίδου γεγένηται φοιτητής—τὸ μὲν αἰσθητικὸν εἶναι τῆς ψυχῆς ἔφη, τὸ δὲ λογικόν.

5.20.1 (~ §3) ὁ δὲ Νικομάχου πέντε εἶναι ταύτης ἔφησεν ἐνεργείας, τὴν ὀρεκτικὴν, τὴν θρεπτικὴν, τὴν αἰσθητικὴν, τὴν μεταβατικὴν, τὴν διανοητικὴν.

5.20.2 (~ §4) ἀλλ' οὐδὲ τοῦτον οἱ Στωϊκοὶ τὸν ἀριθμὸν ἔστερξαν· ἐξ ὁκτώ γὰρ μερῶν ἔφασαν τὴν ψυχὴν ξυνεστάναι, τῆς ὀπτικῆς αἰσθήσεως καὶ τῆς ἀκουστικῆς καὶ τῆς ὁσφρητικῆς καὶ τῆς γευστικῆς καὶ τῆς ἀπτικῆς· ἔκτον δὲ τὸ φωνητικὸν ἔφασαν καὶ τὸ σπερματικὸν ἔβδομον καὶ τὸ ἡγεμονοῦν ὄγδοον, ὅφ' οὗ τούτων ἕκαστον ἐνεργεῖται. εἶπον δὲ αὐτὴν καὶ ταῖς τοῦ πολυπόδοις εἰκέναι πλεκτάναις.

5.21.1 (~ §6) οἱ δὲ γε Πυθαγόρου διάδοχοι ἐκ πέντε στοιχείων τὸ σῶμα κραθῆναι φάντες—τοῖς γὰρ τέτταρσι ξυνέταξαν τὸ αἰθέριον—ισαριθμούς εἶναι ἔφασαν ταύτη καὶ τῆς ψυχῆς τὰς δυνάμεις· καὶ ταύτας ὠνομάκασιν νοῦν καὶ φρόνησιν καὶ ἐπιστήμην καὶ δόξαν καὶ αἴσθησιν.

Testes secundi:

ps.Iustinus Coh. 6.2.17–21 Πλάτων μὲν γὰρ τριμερῆ αὐτὴν εἶναι φησι, καὶ τὸ μὲν λογικὸν αὐτῆς, τὸ δὲ θυμικόν, τὸ δὲ ἐπιθυμητικὸν εἶναι λέγει (~ §1)· Ἀριστοτέλης δὲ οὐ κοινότεραν τὴν ψυχὴν εἶναι φησιν, ἐν ᾧ περιεῖληπται καὶ τὰ φθαρτὰ μόρια, ἀλλὰ τὸ λογικὸν μόνον.

Nemesius NH c. 15, p. 72.4–20 διαιροῦσι δὲ καὶ ἄλλως εἰς δυνάμεις ἢ εἶδη ἢ μέρη τὴν ψυχὴν (~ quaestio), εἰς τε τὸ φυτικόν, ὃ καὶ θρεπτικόν καὶ παθητικόν καλεῖ-

ται, καὶ εἰς τὸ αἰσθητικὸν καὶ εἰς τὸ λογικόν. (~ §4) Ζήνων δὲ ὁ Στωϊκὸς (SVF 1.143) ὀκταμερῆ φησὶν εἶναι τὴν ψυχὴν, διαιρῶν αὐτὴν εἰς τε τὸ ἡγεμονικόν, καὶ εἰς τὰς πέντε αἰσθήσεις, καὶ τὸ φωνητικὸν καὶ τὸ σπερματικόν. Παναίτιος (T 125 Alesse) δὲ ὁ φιλόσοφος τὸ μὲν φωνητικὸν τῆς καθ' ὁρμὴν κινήσεως μέρος εἶναι βούλεται λέγων ὀρθότατα· τὸ δὲ σπερματικὸν οὐ τῆς ψυχῆς μέρος, ἀλλὰ τῆς φύσεως (~ §4). (~ §3) Ἀριστοτέλης δὲ ἐν μὲν τοῖς Φυσικοῖς πέντε εἶναι λέγει τὰ μέρη τῆς ψυχῆς, τὸ τε φυτικὸν καὶ τὸ αἰσθητικὸν καὶ τὸ κινήτικόν κατὰ τόπον καὶ τὸ ὀρεκτικὸν καὶ τὸ διανοητικόν· φυτικὸν λέγων τὸ τρέφον καὶ αὔξειν καὶ γεννᾶν ποιοῦν καὶ διαπλάσσειν τὰ σώματα· καλεῖ δὲ τὸ φυτικὸν καὶ θρεπτικόν, τὸ πᾶν ἀπὸ τοῦ κρατίστου μέρους καλῶν τοῦ τρέφοντος, ἅφ' οὗ καὶ τὰ ἄλλα μέρη τοῦ φυτικοῦ τὴν ὑπαρξιν ἔχει. οὕτω μὲν ἐν τοῖς Φυσικοῖς (*de An.* 2.3 414a31–414b1), ἐν δὲ τοῖς Ἠθικοῖς (*EN* 1.7 1102a27–28) εἰς δύο τὰ πρῶτα καὶ γενικώτατα διαιρεῖ τὴν ψυχὴν, εἰς τε τὸ λογικὸν καὶ τὸ ἄλογον· ὑποδιαίρει δὲ τὸ ἄλογον εἰς τε τὸ ἐπιειθεὲς λόγῳ καὶ εἰς τὸ μὴ κατήκοον λόγου.

Loci Aetiani:

§1 A 4.7.1 Πυθαγόρας Πλάτων τὸ μὲν λογικόν ... τὸ δ' ἄλογον.

§4 A 4.5-7 (Ἀριστο(τέ)λης) οἱ Στωικοὶ πάντες ἐν ὅλῃ τῇ καρδίᾳ ἢ τῷ περὶ τὴν καρδίαν πνεύματι (sc. εἶναι τὸ ἡγεμονικόν). A 4.8.1 ... τὸ ἡγεμονικόν· πάλιν δ' αἰσθητήρια λέγεται πνεύματα νοερά ἀπὸ τοῦ ἡγεμονικοῦ ἅφ' οὗ συνίσταται ἐπὶ τὰ ὄργανα τεταμένα. A 4.10.1 οἱ Στωικοὶ πέντε τὰς εἰδικὰς αἰσθήσεις, ὅρασιν ἀκοὴν ὄσφρησιν γεῦσιν ἀφῆν. A 4.15.3 Χρύσιππος κατὰ τὴν συνέντασιν τοῦ μεταξὺ ἀέρος ὁρᾶν ἡμᾶς, νυγέντος μὲν ὑπὸ τοῦ ὀρατικοῦ πνεύματος, ὅπερ ἀπὸ τοῦ ἡγεμονικοῦ μέχρι τῆς κόρης διήκει. A 4.21.2–4 (*de Stoicis*) ἀπὸ δὲ τοῦ ἡγεμονικοῦ ἑπτὰ μέρη ἐστὶ τῆς ψυχῆς ἐκπεφυκότα καὶ ἐκτεινόμενα εἰς τὸ σῶμα, καθάπερ αἱ ἀπὸ τοῦ πολυπόδου πλεκτάναι· τῶν δ' ἑπτὰ μερῶν τῆς ψυχῆς πέντε μὲν εἰσὶ τὰ αἰσθητήρια, ὅρασις ὄσφρησις ἀκοὴ γεῦσις καὶ ἀφῆ· ὧν ἡ μὲν ὅρασις ἐστὶ πνεῦμα διατεῖνον ἀπὸ τοῦ ἡγεμονικοῦ μέχρις ὀφθαλμῶν, ἀκοὴ δὲ πνεῦμα διατεῖνον ἀπὸ τοῦ ἡγεμονικοῦ μέχρις τῶν ὠτων, ὄσφρησις δὲ πνεῦμα διατεῖνον ἀπὸ τοῦ ἡγεμονικοῦ μέχρι μυκτήρων {λεπτύνων}, γεῦσις δὲ πνεῦμα διατεῖνον ἀπὸ τοῦ ἡγεμονικοῦ μέχρι γλώττης, ἀφῆ δὲ πνεῦμα διατεῖνον ἀπὸ τοῦ ἡγεμονικοῦ μέχρι ἐπιφανείας εἰς θίξιν εὐαίσθητον τῶν προσπιπτόντων. τῶν δὲ λοιπῶν τὸ μὲν λέγεται σπερματικόν, ὅπερ καὶ αὐτὸ πνευμά ἐστι διατεῖνον ἀπὸ τοῦ ἡγεμονικοῦ μέχρι τῶν παραστατῶν· τὸ δὲ 'φωνᾶεν' ὑπὸ τοῦ Ζήωνος εἰρημένον, ὃ καὶ φωνη(τικ)ὸν (*scripsimus*) καλοῦσιν, ἐστὶ πνεῦμα διατεῖνον ἀπὸ τοῦ ἡγεμονικοῦ μέχρι φάρυγγος καὶ γλώττης καὶ τῶν οἰκείων ὀργάνων. A 4.23.1 οἱ Στωικοὶ τὰ μὲν πάθη ἐν τοῖς πεπονθόσι τόποις, τὰς δ' αἰσθήσεις ἐν τῷ ἡγεμονικῷ.

§6 A 1.3.7[36–43] διὰ τοῦτο οὖν νοῦς ἡ μονάς, ᾧ ταῦτα νοοῦμεν, καὶ ἡ δυὰς δ' ἡ ἀόριστος ἐπιστήμη, εἰκότως· πάσα γὰρ ἀπόδειξις καὶ πάσα πίστις ἐπιστήμης, πρὸς δὲ καὶ πᾶς συλλογισμὸς ἔκ τινων ὁμολογουμένων τὸ ἀμφισβητούμενον συνάγει καὶ ῥαδίως ἀποδείκνυται ἔτερον· ὧν ἡ ἐπιστήμη κατάληψις ἐστὶ, διὸ εἴη ἂν δυὰς. ἡ δὲ δόξα τριάς ἐκ καταλήψεως ἐστίν, εὐλόγως, ὅτι πολλῶν ἐστίν ἡ δόξα. A 1.3.21 Ἀριστοτέλης ... πέμπτον δὲ τὸ σῶμα αἰθέριον. A 1.7.23 Ἀριστοτέλης τὸν μὲν ἀνωτάτω θεὸν εἶδος (χωριστόν) ἐπιβεβηκότα τῇ σφαίρᾳ τοῦ παντός, ἥτις ἐστὶν αἰθέριον

σῶμα, τὸ πέμπτον ὑπ' αὐτοῦ καλούμενον. A 1.12.3 Ἀριστοτέλης βαρύτατον μὲν εἶναι τὴν γῆν ἀπλῶς, κουφότατον δὲ τὸ πῦρ· ἀέρα δὲ καὶ ὕδωρ ἄλλοτ' ἄλλως. μηδὲν δὲ πῦρ κυκλοτερώς φύσει κινεῖσθαι, μόνον δὲ τὸ πέμπτον σῶμα. A 1.28.1 αὕτη δ' ἐστὶ τὸ αἰθέριον σῶμα. A 2.30.7 ... τοῦ αἰθέρος, ὃν προσαγορεύει (sc. Ἀριστοτέλης) σῶμα πέμπτον. A 4.9.11 Πυθαγόρας Πλάτων καθαρὸν ἕκαστον εἶναι τῶν αἰσθητῶν ἐξ ἐκάστου στοιχείου προσερχόμενον. πρὸς μὲν οὖν τὴν ὄρασιν τὸ αἰθηρίον πεφυκέναι, πρὸς δὲ τὴν ἀκοὴν τὸ πνευματικόν, πρὸς δὲ τὴν ὄσφρησιν τὸ πυρῶδες, πρὸς δὲ τὴν γεῦσιν τὸ ὑγρόν, πρὸς δὲ τὴν ἀφὴν τὸ γεῶδες.

§7 A 4.5.6 Παρμενίδης ἐν ὄλῳ τῷ θώρακι καὶ Ἐπίκουρος. Al. A 4.5.1 Πλάτων Δημόκριτος ἐν ὄλῳ τῇ κεφαλῇ.

§8 A 4.7a.2 Παρμενίδης καὶ Ἐμπεδοκλῆς καὶ Δημόκριτος ταῦτόν νοῦν καὶ ψυχὴν, καθ' οὓς οὐδὲν ἂν εἴη ζῶον ἄλογον κυρίως. A 5.20.5 Διογένης μετέχειν μὲν αὐτὰ τοῦ νοητοῦ καὶ ἀέρος.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

(1) The witnesses are P and T (and S via Photius' index, see at (2) below). For this chapter in the P tradition we do have the evidence of E, but are lacking G. The latter does, however, supply parallel information in a different section of his tract (cf. above at ch. 4.2, Commentary A). As we have seen at chs. 4.2 and 4.3 and shall see at chs. 4.6 and 4.7, there are parallels in the mixed bag of G c. 24 (see *traditio proxima*), which have reached this destination via a different route. G there moreover has lemmata concerned with the topic of the present chapter that are not paralleled in A, which perhaps entails that in A as compared with an anterior tradition some lemmata have been lost—a thought that is encouraged by the presence of a very full series of soul-parts in Tertullian *De anima* 14.2 (Soranus *de An.* fr. 10 Podolak).

(2) In the mss. of S the chapter is lacking, so reconstruction is more difficult, but Wachsmuth following Elter (1880) 40 has restored in S a reference to Apollonophanes, not paralleled in either P, T, or G, from Photius' index of names and Tertullian's enumeration of doxai. See S *Ecl.* 1.49.7a with annotation in the apparatus and below, section D(b).

(3) As noted above, for P we have P^B, P^Q, and this time also P^E who from Book 4 cites a mere two chapters, viz. 4.4–5, so at least includes our present chapter. P has four lemmata, T five, G five (though not directly from P). G's five moreover contain two lemmata (anonymous philosophers who hold that there are no parts; Mnesarchus who disagrees with 'the Stoics') to which noth-

ing corresponds in either P or T, but the view that the soul has no parts is also found in this context in Tertullian. Only two lemmata of P and T, one on Pythagoras–Plato (P₁ and T₁) and one on the Stoics (P₂ and T₄), correspond with each other; these are to some extent paralleled in G, as is the Aristotle lemma (T₃ only). T is more wordy than usual, and must have consulted or remembered a source which paid attention to Successions and other personalia (for other cases see above, at ch. 4.3 Commentary A(5) *ad finem*, and below, ch. 4.5, Commentary D(d)§7), for he adds that Xenocrates is said to be third counting from Plato and to have been a pupil of Plato's nephew Speusippus (no such details at A 1.3.20 Diels). That the name-label Aristotle is replaced by the formula 'the son of Nicomachus' (parallel only at A 1.3.12 Diels, patronymic as part of full credentials) is a more standard though entirely similar embellishment. We have restored the proper name in the text. And his 'the *diadochoi* of Pythagoras' probably replaces the standard formula οἱ ἀπὸ Πυθαγόρου. Because no help is available for those among T's this time rather wordy lemmata which are not paralleled in the more austere P, reconstructing A's text is this time trickier than usual, and impossible to determine exactly.

(4) Special difficulties are caused by P's two final lemmata. P₃ (Democritus–Epicurus) is not paralleled in the other sources; P₄ (Democritus) however is paralleled in an abridged form at S 1.50.35 (Δημόκριτος τὰ νεκρὰ τῶν σωμάτων αἰσθάνεσθαι, printed by Diels as ch. 4.9.20), i.e. not in the Stobaeon chapter on the soul but in that on sensation etc. The relation of S 1.50.35 to the rest of ch. 4.9 is not obvious. Diels noticed the parallel between the two lemmata, see *DG* apparatus for A 4.9.20 and p. 2.111.30 DK on 68A17, but decided (we do not know his reasons) to refrain from placing the two lemmata next to each other in parallel columns either at the end of ch. 4.4 or at that of ch. 4.9. As P is an epitome, the final position of P₄ ~ A 4.4.8 is secure. Because S habitually rearranges matters, that of the parallel Stobaeon lemma at the end of 4.9 is less certain. See also the preliminary account at Mansfeld (1990a) 3190–3192.

(5) S, as we have seen, is missing apart from a probable reference to Apollophanes and a summary version of §8. §§2, 3, and 6 are not in P^{BE} but present in T, who therefore cannot have taken this extra material from the tradition of P. Just as elsewhere he must have taken it from A, but this time no confirmation can be forthcoming from S.

(6) On ps.Justin's brief text, which this time is not very close to either P or A and has no parallel in Hermias, see our remarks at ch. 4.2 Commentary A(5).

B Proximate Tradition and Sources

(1) *Proximate tradition.* The parts of souls are paralleled in detail in Tertullian, *De an.* 14, see above, section A(1). On the Aëtian chapter and its parallels in the tradition see e.g. Mansfeld (1990a) 3085–3089. The parallel passage at the end of the mixed bag of physical and ethical excerpts deriving from a different tradition that constitute G c. 24 (cited below, section E(b) General texts *ad finem*) is less obviously structured by numbers in succession, though a bit of computation will go a long way to recover this structure. But while T, in preserving §6, has also preserved an intimation of the category of place, a category more clearly attested at §§7–8 as extant in P, this aspect has been lost in G. On the other hand G has preserved, though in a somewhat odd position, the entirely relevant tenet according to which the soul has no parts at all, which is not found in P and T.

(2) *Sources.* The explicit issue of the parts derives from Arist. *de An.* 1.2 402b1 σκεπτέον δὲ καὶ εἰ μεριστὴ ἢ ἀμερής (cf. 1.5 411b5, 3.9 432a22–23), see Mansfeld (1990a) 3087, 3203–3204, 3210, M–R. 2.139–142, and above, Introduction to Book 4, section (6). Alexander *in Sens.* 1.3–5 tells us that Aristotle in the *De anima* treated περὶ τε ψυχῆς τῆς συμπάσης κοινῶς καὶ καθόλου καὶ ἰδίᾳ περὶ ἐκάστης τῶν δυνάμεων αὐτῆς, πόσαι τέ εἰσι καὶ τίνες καὶ ἐν τίσιν ἐκάστη αὐτῶν τὸ εἶναι. See also section D(e) below.

C Chapter Heading

Of the standard umbrella type (περὶ τοῦ δεῖναι) that dominates in the *Placita* (see above, ch. 1.3 Commentary C). As a heading it is found in P only, but referred to by G who begins with εἶναι δὲ τὰ μέρη τῆς ψυχῆς; it is implicit in T, who speaks of the διαίρεσις of the soul, as does Nem *NH* 15, p. 72.3, and in Tertullian *de An.* 14.2, *dividitur ... in partes*. It covers the lemmata of ch. 4 in a general way only, and in relation to the two final lemmata could have been augmented with the specification ἐν τίνι (or ποῦ) ἐστίν, pertaining to the category of place, as noted above on the proximate tradition.

D Analysis

a Context

Ch. 4.4, dealing with a quantitative aspect of soul, follows on upon the two chapters dealing with the soul's substance/definition, 4.2–3, just as ch. 2.12 'On the division of heaven, into how many circles it is divided' follows after ch. 2.11, 'On the heaven, what is its substance', as ch. 2.21 'On the size of the sun' follows after ch. 2.20, 'On the substance of the sun', and ch. 2.26, 'On the size of the moon', follows after ch. 2.25, 'On the substance of the moon'. It is followed by ch. 4.5, 'On the regent part and in what place it is', which is in fact mostly about

the location (category of place) of the regent part. The two final lemmata of ch. 4.4 anticipate this theme by including references to the location of parts of the soul, which at the same time helps explain their final position, close to the next chapter. Compare Chrysippus, who in Book I of his *On the soul* at Galen *PHP* 3.1.9–15 (*SVF* 2.885, cited above at Book 4 titulus et index, Further Related Texts), first says what the soul is, next lists its (eight) parts, and then discusses the location of its regent part.

b Number–Order of Lemmata

P and T confirm each other as to the relative order. Since the chapter deals with the number of the parts (category of quantity) one expects the lemmata to follow each other on either a rising or a descending scale. In a parallel dialectical-doxographical passage, viz. Tertullian *de An.* 14.2, we for instance find an ascending series of soul-parts from two via three, five, six, seven, eight, nine, twelve, and fourteen, to as far as seventeen: a total of ten lemmata. As we do not know to what extent Tertullian's list may have grown in the meantime it is pointless to speculate about lemmata that may have been lost in P and T, though G's again partly different account too suggests that more material may have been present originally.

The rising scale of P and T changes to a descending scale *ad finem*. Compare chs. 4.3.1–13 and 4.8.1–4, both times with Commentary D(c).

P moreover has only four lemmata, and T and G only have five. In P the order according to number is: P₁ (Pythagoras Plato): two but also three parts, P₂ (Stoics): eight parts. So a quite rigorous abridgement though still a rising scale; P then makes a new start with P₃ (Democritus Epicurus): two parts, so a descending scale beginning at P₂ which is simultaneously the end of one and the beginning of another series. T has T₁ (Pythagoras Plato), contents precisely parallel to 'two or rather three' as at P₁, adds T₂ (Xenocrates) as a parallel for the Pythagorean/Platonic bipartition, goes on with T₃ (Aristotle): five parts, T₄ (Stoics): eight parts, all on a rising scale, but then appends a lemma T₅ (Pythagoreans) where we again find five parts, thus finishing with a descending scale beginning at the end of the other scale, viz. T₄. The proximate parallel passage in G has G₁ (Plato): three parts, G₂ (Aristotle): five parts (we have to do the computation ourselves), G₃ (Stoics): four parts, surprisingly, but since the αἰσθητικόν counts as five we get in fact eight parts as in the other sources. G₄, no parts at all, looks out of place; it could have stood at the beginning (as in the parallel at Tert. *de An.* 14.1), or at the end, and seems to have been cited in its actual position as the odd view different from all the others. However this may be, G ends with G₅ (Mnesarchus), a formally dissenting Stoic tenet allowing for only two parts because the speaking and the generative part have been

included in the sensing part (now comprising seven sub-parts, not five as in G3). G5 follows upon G3, on Stoics, as T2 follows upon T1, on Pythagoreans/Platonists.

We have placed the nine parts of Apollophanes (name-label of this hypothetical lemma according to the index of Photius for S, augmented with the doxa from Tertullian) at the end of the rising part of the scale.

P3 (Democritus Epicurus) provides an extra reference to the location in the body of the two parts mentioned, which agrees with the position of the lemma near the end of the chapter. P4 (Democritus) comes last because of its special character: it is not about the parts of the single human soul, but about souls of things as partaking of a general soul-substance. P4 links up with 4.3.14, also a final lemma and also about individual souls in relation to an overarching Soul.

c Rationale–Structure of Chapter

The rationale of the chapter is quite straightforward as long as we look at the main tradition, viz. P and T. In the first part of the chapter the lemmata are listed one after the other according to the number of the parts of soul, so it is the category of quantity that determines their sequence. Number may even override other considerations: §3, the Aristotle lemma, comes before §4, the Stoics lemma, because for Aristotle we have the number five and for the Stoics the number eight. Yet it is clear that the Aristotle lemma echoes the well-known distinction between part of soul and psychic function (*An.* 2.3 414a29–32), and attributes functions or faculties, ‘activities’, rather than parts, to the Aristotelian concept of the soul, although Aristotle himself may use ‘part’ (μέρος) and ‘function’ (δύναμις) interchangeably. (A distinction explicitly acknowledged elsewhere, e.g. Tert. *de An.* 14.3, Them. *in de An.* 117.1–6.) The Aristotle lemma could also have been placed after the Apollophanes lemma (§5), the better to indicate that we are no longer dividing into parts but distinguishing according to function. In §6, too, ‘powers’ of soul, that is to say functions are mentioned, not parts, so from the point of view of function the Aristotle lemma could indeed have been placed immediately before the lemma with the name-label Pythagoreans. Presumably the order in our reconstruction of the chapter (an order based on the principle of least intervention in the orderings of the sources) is as it is because §6, in mentioning the elements of the (human) *body*, preludes upon the *body* in §7 and the *bodies* in §8, and thus also, to some extent, upon the category of place. For in these two final lemmata of the chapter too the category of place comes into view. §7 (Democritus, Epicurus) refers to the location in the body of the two parts of soul. §8 (Democritus) is about the soul of things in general, and that there is some part (in a very literal sense) of soul everywhere. This makes for a rather smooth transition to the next chapter, 4.5,

which is determined by the category of place. We may further note that two of the three final lemmata of ch. 4 are concerned with the category of substance as well. According to §6, name-label Pythagoreans, the five psychic functions that are listed are dependent on the five elements that constitute the body. According to §8, there exists a something that is both warm and sensing out there as well as in here.

d Further Comments

General Points

It is of some importance to note that the division of the soul into parts entails that into a rational and an irrational part, or parts (cf. chs. 4.5-15, 4.7-5), and/or into reason and perception. So it has cognitive import and helps to prepare the ground for the discussion of perception in chs. 4.8–12 and of thought/reason in chs. 4.7a and 4.11.

Individual Points

§1 On the doxai of this lemma see Vander Waerdt (1985b) and Runia (1986) 301–306. Bipartition and tripartition of the soul could (and sometimes did) give rise to differences of opinion and open diaphonia, but here they are presented as complementary. Also note that the problematic issue of the location of the two or three parts or functions of the soul *according to Plato* (later reinterpreted by Galen, see Vegetti 2000, and by the tradition represented by Alcinous and Apuleius, see at section E(b) §3) is not mentioned, so the category of place plays no part in this lemma. We only read in the next chapter, 4.5.1, that according to Plato the location of regent part, the λογικόν, is the head.

The necessary emendation of Tertullian *de An.* 14 *nunc in duas a Platone, nunc in tres*, (*nunc in quattuor a Zenone*) was made by Philippson (1937) 152 n. 6 (missed by Waszink). ‘The highest account (or definition)’ because these two parts are the ἀνωτάτω γένη (cf. Diogenes Laertius *V.P.* 7.110, *SVF* 1.211); the ‘proximate account (or definition)’ because they (sub)divide (διαίρουσιν) the second genus into two species. For the idea see Diogenes Laertius *V.P.* 3.49, τοῦ δὴ (δια)λόγου τοῦ Πλατωνικοῦ δύο εἰσὶν ἀνωτάτω χαρακτῆρες, ὃ τε ὑφηγητικός καὶ ὁ ζητητικός. διαίρεται δὲ ὁ ὑφηγητικός εἰς ἄλλους δύο χαρακτῆρας κτλ.; for the terminology cf. the division of Eudorus fr. 3 Mazzarelli at Simplicius *in Phys.* 181.10–13, κατὰ τὸν ἀνωτάτω λόγον φατέον τοὺς Πυθαγορικοὺς τὸ ἐν ἀρχὴν τῶν πάντων λέγειν, κατὰ δὲ τὸν δεῦτερον λόγον δύο ἀρχὰς τῶν ἀποτελουμένων εἶναι, τό τε ἐν καὶ τὴν ἐναντίαν τούτῳ φύσιν. Also cf. Nem *NH* 15, p. 72.18–20, εἰς δύο τὰ πρῶτα καὶ γενικώτατα διαίρει τὴν ψυχὴν, ... ὑποδιαίρει δὲ τὸ ἄλογον, and Heraclitus *All.Hom.* 17.6–8, τὴν γὰρ ὅλην ψυχὴν διήρηκεν εἰς γένη δύο, ... τοῦ δ’ ἀλόγου μέρους ἰδικωτέραν ὑφίσταται διαίρεσιν, both cited at section E(b)§1.

§3 Aristotle. The parallel in Nem explicitly states that Aristotle's definition belongs with physics. A combination of five Platonic and Aristotelian parts/functions is at Plutarch *De E* 390E–F. Though the lemma, as noted at section D(c) above, reflects a preference for functions or faculties, 'activities', over parts, both Plutarch and Alexander of Aphrodisias may use the words *μόρια* and *δυνάμεις* interchangeably, see section E(b)§3. For Aristotle these 'parts' are different qua definition, not as to location, cf. *de An.* 2.2 413b13–16, *πότερον δὲ τούτων ἕκαστόν ἐστι ψυχὴ ἢ μόριον ψυχῆς, καὶ εἰ μόριον, πότερον οὕτως ὥστ' εἶναι χωριστόν λόγῳ μόνον ἢ καὶ τόπῳ, περὶ μὲν τινῶν τούτων οὐ χαλεπὸν ἰδεῖν*. Also see *de An.* 3.4 429a10–14. The issue is also discussed in ps.Plutarch *Utrum pars an facultas animi affectibus subiecta sit*.

§§4–5 Stoics. The related passages in Nem and G are further variations on the theme of slight differences of view in the Stoic school.

§6 Arist. *Sens.* 2 437a20–22 tells us that his predecessors were confronted with the vexing problem of connecting the five senses to the four elements: *ἐνιοὶ μὲν ζητοῦσι κατὰ τὰ στοιχεῖα τῶν σωμάτων· οὐκ εὐποροῦντες δὲ πρὸς τέτταρα πέντ' οὐσας συνάγειν, γλίσχονται περὶ τῆς πέμπτης*. The Pythagorean doctrine found in §6, neglected in the literature on the topic, presumably belongs with the context of Plutarch's extensive numerological exposition on the number five at *De E* 387D–391E, though the parallel is not precise. The five elements are of course standard Aristotelian fare, but we should also think of the Pythagoreanism of the Ancient Academy, see Baltes (1999). Speusippus, for instance, fr. 4 Lang (F 122 Isnardi Parente, 28 Tarán), calls the five elements Pythagorean. Another backdrop is Plato's unwritten doctrine as described by Aristotle *de An.* 1.2 404b22–24. In this Aristotelian passage *φρόνησις* is lacking, just as in the Neopythagorean parallel in the *Placita* itself, above ch. 1.3.7 [74–89] about the tetrad, which is also different in that there is no mention of the four (let alone five) elements. Burkert (1972) 69–70 with n. 10 correctly points out that what is at §6 is Platonism posing as Pythagoreanism, but *pace* Burkert we contend that, ultimately, A also depends on Aristotle *de An.* 1.2 404b22–24, via Platonizing and Pythagoreanizing intermediaries. The passages are proof of Neopythagorean colouring. An important parallel is found below at ch. 4.9.11, where Pythagoras(!) and Plato are said to hold that each sense (rather than, as here, each cognitive function, sensation only being one of five) is connected with one of five elements: 'The aetherial is attached to sight, the pneumatic to hearing, the fire-like to smell, the wet to taste, and the earth-like to touch'. The only element identified in ch. 4.4.6, τὸ αἰθέριον, corresponds with the αἰθερώδες of ch. 4.9.11, and the (probable, because not explicit) correspondence between aether/mind in the first passage with aether/sight in the second is telling: as a further backdrop we may assume an argument from the visible to the invisible,

as in the case of Posidonius F 85 E.-K. (fr. 395a Theiler) at Sextus Empiricus *M.* 7.93. For the correspondence between aether and mind see also the doctrine attributed to Aristotle in the harmonizing Antiochean account of the history of philosophy at Cicero *Varr.* 1.26, *quintum genus, e quo essent astra mentesque, singulare eorumque quattuor quae supra dixi dissimile Aristoteles quoddam esse rebatur*. Baltes (1978) 35–36 lists thirteen passages where the senses are connected with the elements; as a fourteenth we should add A 4.4.6, and as a fifteenth the passage from ps.Hippocrates *Letter to Ptolemy* cited section E(b)§6.

§7 The name-label Democritus has caused offence, because at ch. 4.5.1 Democritus is said to have placed the regent part, equivalent to the λογικόν, ‘in the whole head’, not in the chest as here. Cf. Diels *DG ad loc.*, ‘Democritus male videtur a Plutarcho additus [sc. here in 4.4.7] cf. 5.1’, who thinks of a blunder by P rather than A. But the *Placita* tradition concerned with Democritus’ psychology is firmly Aristotelian. The substance of the soul assigned to him at A 4.3.5 derives from *de An.* 1.2 403b31–404a2 and 405a8–13, see section E(b)§7, where we learn that soul-atoms are breathed in (and out). Ibid. 404a26–32 we learn that according Democritus soul and mind are the same, which is echoed at A 4.7a.2 (4.5.12 Diels, again see section E(b)§7). The conclusion that for this kind of soul/mind the chest is the right location is obvious, even if it is based on Aristotle’s information only and is merely a conclusion drawn by one of A’s doxographical predecessors. Complementing our explanation so far could be the fact that, *more doxographico*, the tenet of Epicurus is also attributed to *ur*-atomist Democritus. Which, again from a purely doxographical point of view, need not mean that the attribution of the tenet that the regent part is in the head to Democritus at A 4.5.1 is entirely false. This alternative attribution may very well derive from a different current of the tradition, a more biographical or diadochical one, which attributed this view to Democritus because he was believed to be the teacher of Hippocrates, who is mentioned together with Democritus and Plato in T’s version of the lemma. See the preliminary discussion of the evidence at Mansfeld (1990a) 3088–3089 n. 120. It is a not uncommon practice in ancient historiography to preserve various bits of information even when these conflict with each other, for instance already at the basic level of whose son someone is or what city he came from.

§8 See the parallels cited in section E(b); for the backdrop cf. above, ch. 4.3, Commentary (d)§14. The idea is attested for Parmenides and Empedocles in verbatim fragments. See also Mansfeld (1990a) 3191.

e Other Evidence

Parts or functions of what we may call ‘soul’ (*noos/nous*, *thumos*, *menos*, *phrenes*, *ker*, *kradie*) are of course already familiar from Homer and poetry in gen-

eral, see Jahn (1987). In Plato the division of the soul into two or three parts is a topic in several dialogues. The theme is on Aristotle's checklist of issues at the beginning of the *De anima*, 1.1 402b1, *σκεπτέον δὲ καὶ εἰ μεριστὴ ἢ ἀμερής*, and widely illustrated in the treatise. It is found in quite a few dialectical-doxographical parallels, see material in Mansfeld (1990a) 3085–3089. The division of the soul is also an important topic in Hellenistic philosophy, and later in the treatises of Porphyry and Iamblichus partially preserved by Stobaeus. Cf. Dörrie (1959) 104: 'Schon Aetios ließ in seiner Doxographie dem Abschnitt über das Wesen der Seele (4.3) ein Kapitel über ihre Teile (4.4) folgen. Wahrscheinlich folgte Porphyrios [sc. in the *Symmikta Zetemata*] dieser sinnvollen Einteilung des Stoffes.' For curiosity's sake one may mention the seven corporeal parts of the soul according to the (Hellenistic) pseudo-Hippocratic *De hebdomadibus*, cf. section E(b) General texts; see West (1971) 380–381, Mansfeld (1971) 209–211.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

(1) The only witnesses for this chapter are P and T. The witnesses for P are P^B, P^E, and P^Q. P has thirteen lemmata, which makes this one of his longest chapters in terms of lemmata. As has been previously noted, in the final Book of the *Praeparatio evangelica* E includes P's chapters 4.4–5. He omits §10 (= P₉), and moves the name-label Epicurus from P₅ to his version of P₆. S is unfortunately lost, which makes the reconstruction of the chapter difficult (we do not include in the present chapter the two lemmata from S Diels *DG* 392 located *ad finem*; for these see ch. 4.7a below). Although the doxographical tradition is a living and open one, that is, one hospitable to further material, so later evidence could have come in independently from what was in A, comparison with the wider and richer dialectical-doxographical tradition leads one to suspect that P, true to his method, has abridged the chapter. T too has been abridging and summarizing and as is his wont done so even more rigorously than P, but his remaining lemmata are very close to their parallels in P.

(2) T has only nine lemmata. Evidence not paralleled in P, namely §2, the information regarding Hippocrates and the brain which itself is confirmed by other representatives of the doxographical tradition, again confirms that T here does not derive from P but from A as the *uberior fons*. P and T's shared ἐν ὅλῃ τῇ καρδίᾳ in §6 is in favour of preserving P's ἐν ὅλῃ τῇ κεφαλῇ in §1. The first lemma

in T combines the contents of the first two lemmata in A, combining the three name-labels Hippocrates Democritus Plato, and for the doxa itself omitting ἐν ὅλῃ τῇ κεφαλῇ in favour of ἐν ἐγκεφάλῳ. In this way we get the required contrast between the first paragraph of the section dealing with the head and the first paragraph of the section dealing with the chest, viz. of §1 with §6. The restored name-label Ἀριστο(τέ)λης at the beginning of §7, not paralleled in P (or E), is based on T's Ἀριστοκλῆς. The overall resemblance between P and T, and the extra lemmata concerned with early name-labels to be found in other strands of the tradition (e.g. Macrobius), suggest that A already abridged the material. At any rate the exceptionally rich and diverse dialectical-doxographical parallels suggest that P and T must have considerably abridged their source, which again makes us deplore the loss of S.

B Proximate Tradition and Sources

(1) *Proximate tradition.* For the proximate tradition see the various and variously detailed accounts of e.g. Cicero *Tusc.* 1.19–21 (who includes related issues), Philo *Somn.* 1.32, and Tertullian *de An.* 1.5. Paul Wendland, who discovered and analyzed the Philo passage, argued at (1897) 1095 that this proves that Philo used Diels' *Vetusta placita*. In general see Mansfeld (1990a) 3092–3108 (P and T, Soranus, Pollux, Anonymus Parisinus olim Darembergii sive Fuch-sii), plus 3108–3131 (Alexander, Calcidius), 3117 (Philo), and 3127 (Cicero); cf. above ch. 2.11, Commentary B; ch. 4.2, Commentary B; and ch. 4.3, Commentary B. To some extent Cicero, Philo, Soranus and Tertullian are dependent on earlier and richer versions of the tradition, but extra material has also been incorporated subsequently: not only new tenets, but also earlier ones through retrograde contamination. For the much earlier version of our chapter abstracted by Chrysippus see below, section D(e).

(2) *Sources.* See below, section E(b) General texts, for the widespread tradition. The *hegemonikon* is what we think with and even, according to some, the seat of our feelings. Before the term *hegemonikon* became popular the discussion about the location of this part or function was formulated in terms of 'what we think with' or 'what is primary'. The opposition between brain and heart is already found in the *Corpus Hippocraticum*, namely at *De morbo sacro* chs. 14 and 17, where the author argues for the brain against those who favour the heart as the seat of the seat of both 'understanding' (ξύνεσις) and emotion. It is touched upon at Plato *Phd.* 96b, who lists no less than three of the fourteen alternative views in our *Placita* chapter, namely that 'what we think with' (ὃ φρονοῦμεν) is blood (cf. §9), or air (cf. §§7–8), or the brain (cf. §2); cf. Mansfeld (2000a) 8–10 = M–R 3.191–193. The location of the regent part and the conflicting views concerning its location are *not* at all an issue in Aristotle's

psychological treatise, see M–R 2.1.142. He briefly refers to it elsewhere, viz. *Met.* Z.10 1035b25–28 and *Met.* Δ.1 1013a4–7, where he speaks of the ‘first (part),’ be this heart or brain, or ‘the primary (part), in which the essence and the *logos* are present’ (ἐν ᾧ πρῶτον ὁ λόγος καὶ ἡ οὐσία). For the problem discussed in these passages this issue is (as he says) irrelevant, which obviously implies that in another context it is not. Cf. below, ch. 5.17, Commentary B(b). According to Demetrius Laco (below section E(a)§6) Epicurus argued in favour of the position of the *hegemonikon* in the chest against ‘many doctors’ (we may think of Hippocratics, perhaps of Epicurus’ near contemporary Herophilus) who placed it in the head (see below, section E(b)§§7/14). Alexander of Aphrodisias updates the issue from a Peripatetic point of view by arguing at some length in favour of the chest and the heart as the seat of the *hegemonikon*, *de An.* 98.8–100.13, and clearly refers to the diaphonia as formulated in the doxographical tradition and its dependants, see Mansfeld (1990a) 3108–3122 and Accatino–Donini (1996) 309. Bergeron–Dufour (2008) 360–364, 373 are not aware of the doxographical background.

C Chapter Heading

A long and detailed heading, preserved in P only. It is concerned with the question type/category of substance and the category of place. Compare the heading of ch. 2.5a, ‘Where does the cosmos have its regent part’ (ποῦ ἔχει τὸ ἡγεμονικόν ὁ κόσμος), derived by us from the general heading of S 1.21; see M–R 2.1.186, 2.2.374. Also cf. the heading of ch. 4.21 ‘How the soul comes to be sentient and what is its regent part’ (πόθεν αἰσθητικὴ γίνεται ἡ ψυχὴ καὶ τί αὐτῆς τὸ ἡγεμονικόν in P, τί αὐτῆς τὸ ἡγεμονικόν in S). It is echoed at Alexander *de An.* 94.7–8, see section E(b) General texts. For the τί ἐστὶ aspect see above, ch. 1.1, Commentary C. According to Galen *PHP* 7.1.1 there were far too many books dealing with the *hegemonikon*. E’s brief version Περί ἡγεμονικοῦ, presumably of his own devising, is noteworthy. A similar title is attested for one of the Stoic scholars, Galen *PHP* 2.5.7 ‘Diogenes of Babylon wrote in his *On the Regent Part of the Soul*’ (ἔγραψεν ἐν τῷ Περί τοῦ τῆς ψυχῆς ἡγεμονικοῦ Διογένης ὁ Βαβυλωνίος, *SVF* 3 Diog. 29), and for Ptolemy’s extant treatise *On the Criterion and the Hegemonikon* (Περὶ κριτηρίου καὶ ἡγεμονικοῦ). Galen *PHP* 3.3.24 (*SVF* 2.906) and elsewhere refers to Book 1 of Chrysippus’ *On the Soul* with the formula ὁ περὶ ἡγεμονικοῦ λόγος.

D Analysis

a Context

Our chapter follows on after ch. 4 dealing with the parts of soul, which in §1, §2, §4 (with the term ἡγεμονικοῦ), §6 and §7 distinguishes the rational or thinking

part of soul from another part or parts of soul, and in §7 also anticipates the category of place of ch. 4.5. It is followed at some distance (in our reconstruction) by a short chapter on intellect (ch. 7a). The regent part can be qualified as intellect, e.g. Philo *Leg.* 1.39, ‘just as the regent part of the body is the face, so the regent part of the soul is the intellect’ (ὥσπερ σώματος ἡγεμονικόν ἐστὶ πρόσωπον, οὕτως ψυχῆς ἡγεμονικόν ἐστὶν ὁ νοῦς). This is not generally so in ch. 4.5, but there is a hint in the final lemma, where the regent part qua ‘rational and intelligent’ or *nous*-like (λογικὸν καὶ νοερόν), is said to be in the head.

By and large the chapters on the soul and the senses in Book 4 follow the order of treatment of these topics in Aristotle’s *De anima* and in Chrysippus’ *On the Soul*, see M–R 2.1.138–144, 145–147, and above, Introduction to Book 4, section 6, and ch. 4.2, Commentary D(a) and (c). At *de An.* 3.4 Aristotle argues that the thinking part of the soul has no bodily organ, so lacks a specific location. The insertion of the present topic in the (Aristotelian) series of psychological chapters of the doxography mirrors the priorities of the Hellenistic philosophical agenda: for the main schools, the Stoics and Epicureans, the soul is corporeal, so its regent part must have a location in physical space. Disagreement about its location virtually never stopped.

b Number–Order of Lemmata

The fourteen lemmata of P and the nine of T as found in the sources, that is, as not interfered with by our reconstruction (our addition of §2), occur in exactly the same relative order, so must reproduce the order of A. From this point of view the reconstruction of the chapter is very safe. The only differences as to number and sequence with Diels’ chapter in the *DG* are on the one hand the addition of lemma 4.5.2 (Hippocrates), and on the other our distribution of the four doxai of a single Dielsian paragraph over §§9–12. See further above at section A.

c Rationale–Structure of Chapter

The rationale of the chapter, which in a very conspicuous way provides answers to the question ‘where?’ and so is about the category of place, is determined by a sequence of bodily parts *a capite ad calcem*. At the same time it is concerned with the category of substance, because it tells us what these parts are. The main diaphonia is between first the head as a whole, §§1–5, and second the thorax as a whole, §§6–13 so the list goes down from the head to the chest. In each of these main parts we find again a movement from top to bottom: in the region of the head from the membrane of the brain to the ventricle at its basis, in the region of the chest from the *pneuma* about the heart to the diaphragm at the boundary between chest and belly. And in each of these main parts there is

a further subdivision, viz. into the parts of the head and into those of the heart, respectively. At the end, §§14–15, we find two compromise positions, two varieties of ‘both’. The ‘younger ones’, not further identified (perhaps later Hellenistic philosophers or later doctors), say that the regent part outflanks the main division and reaches from the head to the diaphragm so is in both locations. A different overarching view is assigned to Pythagoras, who at a first glance is somewhat strangely said to have thought of two regent parts, a rational one in the head and a biotic one (ζωτικόν) in the heart, each occupying one of the main positions. This can actually be paralleled, see below, section D(d).

d Further Comments

General Points

In view of the openness of the tradition one should be reluctant to attribute to A every extra piece of information in Tertullian or Macrobius or Augustine or Caelius Aurelianus. Diels *DG* 202–204 attributed the richer information in Cicero and the later sources to his hypothetical *Vetusta placita*. We prefer to speak of the anterior doxographical tradition in general.

Of specific interest is the presence of *medical* tenets, some with name-labels, and some without. ‘Doctors’ (no names, but some doxai correspond) were already mentioned in the passage of Chrysippus *On Soul* (see below, section D(e)), which constitutes our earliest evidence for a collection of doxai concerned with the location of the regent part in a diaeresis including *parts* of the chest and *parts* of the head. The third subpart of the generic division of Stoic physics, called *aetiologikon* and dealing with the *hegemonikon* and related issues, was shared between philosophers and doctors, see M–R 2.1.105–107. An even earlier discussion of the seat of the regent part, with reference to doctors (no names, but they are said to be ‘numerous’), is in Epicurus fr. 313 Usener in Demetrius Laco, cited section E(b)§§4–5. Here, however, there is no evidence of a full diaeresis, and Demetrius only tells us that Epicurus argued against the doctors, not that he did so against the philosophers as well (though it is likely enough that in the lost portion of the text he included the latter, for refraining from criticizing his philosophical opponents is not typical of Epicurus). See Mansfeld (1990a) 3177–3179. Names of doctors are also listed at Tertullian *de An.* 15.3: Strato (the Erasistratean), Andreas, Asclepiades, Herophilus, Erasistratus, Diocles, Hippocrates, and Soranus (who may be Tertullian’s immediate source, see Waszink 1947, 224, and Podolak 2011, 117–120, 144–148).

Individual Points

§1 For the name-label Democritus, whose doxa here conflicts with that of ch. 4.4.7, see the tentative explanation at ch. 4.4 Commentary D(d)§7 above.

§2 Hippocrates is not placed first, as in T's lemma, because he places the regent part in the brain, i.e. in a part of the head, and not in the head as a whole. The head as a whole is taken care of at the beginning of the series concerned with the head, in §1, just as the chest as a whole is taken care of in §6, at the beginning of the series concerned with the chest. For further observations on the links between this chapter on the ἡγεμονικόν and ch. 5.17 see Mansfeld (1990a) 3013, 3212–3216.

§3 On Strato's regent part in ps.Plutarch *De aegritudine et libidine* ch. 4, partly cited section E(b)§2, see Sandbach (1969) 42–43 n. c.

§7 Diels *DG* 204 n. 1 naturally pointed out that T's Aristocles must be a mistake and suggested Ἀριστο(τέλης καὶ Διο)κλῆς, though he did not put this reading in his text at *DG* 391, where he cites the traditional conjecture Ἀριστο(τέ)λης. His own conjecture is too clever (it is questioned at Mansfeld 1990a, 3095, considered too speculative by Runia 1999a, 208 = M–R 3.2.534, and not mentioned by Van der Eijk 2000–2001). It is simpler to assume a trivial case of perseveration, the -κλῆς after Ἀριστο- echoing the -κλῆς after Ἐμπεδο- in T. The mistake is scribal (a case of mishearing or -reading) and not to be explained as a wilful modification on the part of T. At *CAG* 5.17 (~ A 4.2.6, see ad loc.) T replaced A's name-label by the more recherché ὁ δὲ Σταγειρίτης; he added similar information on Aristotle and Epicurus and Xenocrates and others in earlier chapters, see above, ch. 4.3 Commentary A(5) *ad finem* and 4.4 Commentary A(3). The ethnicon is paralleled at *CAG* 4.11, where it derives from A's chapter on the principles, as is clear from P 1.3.12 (and in P it occurs only here), and confirmed at Ach 3.3, p. 9.16 (the only occurrence in Ach). So T lets on that he knows whom he is writing about. It is also relevant that the combined name-labels Aristotle and Stoa are paralleled in Pollux in a very similar context, though he ascribes different doxai to the two name-labels Aristotle and the Stoa (*Onomast.* 2.226–227 εἴτε περὶ τὸ αἶμα, ὥς Ἐμπεδοκλῆς τε καὶ Ἀριστοτέλης, εἴτε περὶ τὴν καρδίαν, ὥς ἡ Στοά). The view involved is well-attested for Aristotle, e.g. *Iuv.* 3 469a4, 469a33–b1, *PA* 3.4 665b18–23. (It is attested for Diocles too, see frs. 78, 80, 102, 108 Van der Eijk, so one understands why Diels was tempted).

The Stoic doxa is that of the majority. πάντες fails to take the view of those Stoics into account who placed the regent part in the head. In the *Placita* this minority view is stated in the Stoic chapter 4.21.1 & 4, where the regent part is the 'highest part', and located 'in our spherical head'. πάντες is explicit. So there is a long-distance diaphonia, possibly unintentional, between chs. 4.5.7 and 4.21.4.

§8 Perhaps a doxographer wished to suggest, or even believed, that the name-label Diogenes pertains not to the Stoic philosopher from Babylon but to the earlier philosopher from Apollonia, though qua contents it is more likely

that the doxa represents a refinement of the general Stoic view (above, §4). A lemma in the chapter ‘On taste’, 4.18.2, links the tongue via veins ‘to the sense and the regent part’; it is more likely that this pertains to the Stoic Diogenes as well, since the route to the regent part via a sense is a Stoic idea—the said sense consisting of a pneumatic current.

§9 This view goes all the way back to Empedocles 31B105 DK. Both Tertulian and Calcidius quote the third line, in a different Latin translation each time, and a partial translation is already found at Cicero *Tusc.* 1.19. Perhaps we should cautiously suppose that the fuller quotation entered the tradition at a later moment, though it cannot be excluded that it was quoted by A and/or already by one of his predecessors. Verbatim quotations of Empedocles have been preserved in other *Placita* chapters, viz. at 1.3.19 (31B6 DK) and 1.30.1 (31B8 DK). That the blood at the heart is meant and not blood in general is clear from the position of the doxa in the sequence of lemmata, so θέσει not φύσει. Perhaps, moreover, we should consider adding the adjective περιχάρδιος, used by Empedocles himself, translated in a passage depending on the wider doxographical tradition by Cicero (cited above), and here used a few lines down, at §11. On the other hand ps.Plutarch *Strom.* 10 tells us that according to Empedocles the regent part is neither in the head nor in the breast but in the blood, and that people are more capable depending on the part of the body where it is present to a greater extent. This is a not unfair summary of (an account like) Theophrastus *Sens.* 10–11 as a whole, which contains the lapidary phrase ‘we think mostly with the blood’. The version of the doxa found in the (unemended) Aëtian lemma *de facto* turns its content into a compromise position comparable to that formulated in the *Stromateis*, but as pointed out above its position in the chapter shows that *de iure* it belongs with the second horn of the diaphonia. Even so, the parallel in the other ps.Plutarch shows what sort of inference could be based on the shorter version.

Diels *DG* 222, in his presentation of the evidence he could find for the (partial) dependence of sections and lemmata of the *Placita* on Theophrastus’ *De sensibus*, compared §9 with *Sens.* 10 τῷ αἵματι μάλιστα φρονεῖν, of course adding that the point about the ἡγεμονικόν is ‘recentiore sermone expressum’. *Ibid.* 223 he expresses himself more strongly, arguing that the attribution to Philolaus of a ἡγεμονικόν of the cosmos at ch. 2.4.15 Diels (~ 2.5a.4 M–R—he could have referred to ch. 2.5a as a whole, inclusive of the heading) is a case of ‘fraus’, and he refers back to our §9 for the same situation. For Diels on what he sees as doxographical fraud see M–R 1.99–100.

§12 E adds τῶν νεφρῶν after διαφράγμα, thus preserving extra material (rare in E, see M–R 1.139 with n. 54). From an anatomical point of view this reading is unobjectionable, because the kidneys are immediately below the diaphragm,

the position of which is thus indicated quite precisely. Mras, referring to Plato *Tim.* 72a, conjectures φρενῶν (another word for diaphragm) for E's νεφρῶν. The phrase διαφράγμα τῶν φρενῶν presumably is supposed to mean 'the partition consisting of the diaphragm'. However, this brilliant conjecture seems hardly necessary. Since τῶν νεφρῶν may be no more than a glossema, we have not included these words in the text.

§13 In A the formula τῶν νεωτέρων τινες is only paralleled at ch. 2.29.4–5, where the context shows that later Pythagoreans are meant (the better text of S contrasts them with 'the Pythagoreans according to the research of Aristotle and the assertion of Philip of Opus', fr. x Tarán). The striking parallel with the psychology of Alexander Polyhistor's *Pythagorean Hypomnemata* at Diogenes Laertius *VP.* 8.30 (quoted section E(b) ad loc.) suggest that this identification applies also here. The doxa attributed to Pythagoras himself at §14 is paralleled at *VP.* 8.30 as well; Theiler (1982) 335–336 attributes these doxai to Posidonius.

§14 For two regent parts, one in the head and one in the chest, compare Calcidius in *Tim.* cc. 231–232 (a sentence from c. 231 is quoted section E(a)§14). There is also a link with the first two of the four principles of the rational living being according to Philolaus, see 44B13 DK (cited below section E(b)§14): 'the head is the (seat) of the intellect, the heart of life and sensation ... the brain (contains) the principle of man, the heart of the living being'. It is very likely that the doxa refers to these kinds of reports. So the name-label Pythagoras may have supplanted Philolaus.

e Other Evidence

The Ciceronian and Philonic parallels are important because they show the indebtedness of A to a shared anterior tradition, just as in the previous chapters (4.2 and 4.3), and as in ch. 4.9 below, where A's parallels with Cicero show the same sort of dependence. The evidence in Tertullian, as indicated above, is also richer. More sensationally, as far as we know a version of the present *Placita* chapter was for the first time cited by Chrysippus in Book 1 of his *On Soul* (cited above Book 4 titulus et index, related texts, and in part below section E(a) General texts)—a unique testimony concerning the use of a predecessor of our *Placita* chapter in the third cent. BCE, see Mansfeld (1989a). Qua importance for the history of doxography this testimony is on a similar level as the evidence of *PPack*² 1499 for ch. 4.16, where see at Commentary B, Proximate tradition. See further above at section B, sources.

Commentary

A *Witnesses*

(1) The witnesses are P (represented by P^B, P^Q but not by P^E; on P^J see below (2)), and S. P has two lemmata, P₁ and P₂. *Ad sententiam* the main point is the same in S. Parallel to P₂, S at 1.49.7b has a single lemma with name-label Aristotle. Parallel to P₁, S coalesces one name-label (Plato) and the two different attributes of the soul (ἄφθαρτον and ἀεικίνητον) from A 4.7.1 and A 4.6.1, in that order, at 1.49.7c. Lactantius *Op.D.* 17.1 (see section E(a)§1) and G c. 24 *DG* p. 613.15–16 ἀλλ' ὁ Πλάτων ἀεικίνητον καὶ οὐδέποτε διαφθαρησομένην interestingly provide a parallel for S's coalescence.

(2) The diaeresis of ps.Justin is very close to P (the verbal parallels are exact), so it is very likely that in this case, differing from chs. 4.2–4, he drew on the *Epitome*. On the question of his relation to P and A see also General Introduction section 4.1.(3), and our remarks in ch. 4.2 Commentary A(5).

(3) T has not excerpted this chapter.

(4) The numbering and division at S *Ecl.* 1.49.7a (= A 4.4.5), 7b, and 7c based on the chapters of A in the *DG* introduced (as always) by Wachsmuth in S proves quite confusing here, for to our surprise he has failed to notice that S has coalesced the two chapters 4.6 and 4.7. This intervention is compounded by partly mistaken references, as Wachsmuth refers 1.49.7b to A 4.3.2 instead of 4.6.2, and 1.49.7c to A 4.3.1 instead of 4.6.1 (but his references to the pages of *DG* are correct). We note that S's coalescence results in his reversing the order of the doxai.

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. In G this material probably arrived from a parallel tradition. G c. 24 *DG* 613.16 notes that Plato's soul is ἀεικίνητον (as at *Phdr.* 245c), but this has to do more with its indestructibility (as in A 4.7) than with a contrast to something that does not move. Several lines up, p. 613.10–11, he tells us that 'according to some it is the principle of the motion of all the things that are and are becoming', οἱ δὲ κινήσεως ἀρχὴν πάντων τῶν γινομένων καὶ τῶν ὄντων. This is best interpreted as another reminiscence of the famous passage in *Phaedrus*. The parallel chapter in Iamblichus has also preserved the contrasting views of Stoics and physicists and others who attribute corporeal movements to the soul, see Festugière (1953) 11.

(2) *Sources*. Both lemmata go back in part to passages in Plato and Aristotle, namely the famous passage in the *Phaedrus* on the ever-moving self-moved

immortal soul as principle of motion (246b–c), and esp. the third chapter of Book 1 of the *De anima*, which begins by criticizing Plato's view of self-motion, continues this criticism further down, and for the soul admits only motion *per accidens*. Thus, the diaphonia of the present chapter is anticipated in Aristotle.

C Chapter Heading

The heading is again a case of the umbrella type (περὶ τοῦ δεῖναι) that dominates in the *Placita* (see above, ch. 1.3 Commentary C), and here refers precisely to one aspect: the soul's *motion*, a concept about which questions can be put in all categories, see Theophrastus fr. 153B FHS&G at ch. 1.23 above, Commentary C. It is found in P^B, confirmed by P^Q, and also occurs in S. It is clearly adumbrated by the embedded heading at Aristotle *de An.* 1.3 405b30–31, cited below section E(b) Chapter heading. But note that S coalesces the two headings of chs. 4.6 and 4.7 into a single short sub-heading of his major ch. 1.49 at 1.49.7b, p. 325.9: 'On movement and indestructibility of soul' (Περὶ κινήσεως καὶ ἀφθαρσίας ψυχῆς). Though the phrase κίνησις ψυχῆς is not unusual, Περὶ κινήσεως ψυχῆς cannot be paralleled as a phrase, heading, or title. For parallels for the heading of ch. 4.7 see at that chapter, Commentary C.

D Analysis

a Context

This is the penultimate chapter of the cluster of six on the soul *per se*. Together with ch. 7 it forms a sort of appendix in which remaining issues are mopped up, after the rather more substantial chs. 4.2–5. The *Placita* didactically separate themes that may be treated together in other literature and often are in fact so treated, cf. Diels (1897) 112, cited above, Introduction to Book 1, section 2. S for the sake of efficiency again combines them—an efficiency much enhanced by the ruthless Byzantine excerptors of the pages corresponding to chs. 4.6–7. The soul's motion is a major theme in the critical overview of doctrines in Aristotle's *De anima*, see e.g. on the predecessors 1.2 403b28–29; M–R 2.1.143–144. The νοῦς mentioned in the second clause of §1 connects up with the theme of ch. 4.7a Περὶ νοῦ.

b Number–Order of Lemmata

Both P and S have two lemmata. The order in S is the converse of that in P. But S at *Ecl.* 1.49.7b–c has interfered with the sequence, so we should follow that of P just as Diels has done in the *DG*. S moreover has coalesced the Plato lemma of ch. 4.7.1 with that of 4.6.1, thus reading Πλάτων ἀφθαρτον καὶ ἀεικίνητον, in the process considerably abridging the contents. This new lemma S2 serves to introduce the verbatim quotation in S of Plato, *Phd.* 69e–70b, which in its turn justifies the abridgement of the original lemma, of which we have a much

fuller text in P₁ (cf. Jeremiah 2018 at M–R 4.286 and 353). On the other hand the text of the second lemma has (as so often) been somewhat abridged in P. Diels has bracketed {ἄφθαρτον καὶ} at 4.6.1, though he could have divided the contents of the coalesced lemma over chs. 4.6 and 4.7 in his column for S, as we do now in the text of both reconstructed chapters.

The chapter comprises the main diaphonia going back to Aristotle (cf. above, section A). Now Aristotle at *de An.* 1.3 406b15–25 also includes Democritus' view of the soul's self-motion, not represented in the present chapter, as a parallel to Plato's view. The previous ch. 4.2 moreover attributes self-motion to the soul not only to Plato in §5, but also to Thales in §1, Alcmaeon in §2, Pythagoras in §3, and Xenocrates in §4 (no Democritus here either). Xenocrates' view that the soul is a self-moving number is sharply criticized at *de An.* 1.4 408b32–409a10 (followed by further criticism of Democritus) and at *de An.* 1.5 409a31–b8 together with that of Democritus. We note that in ch. 4.2.6 on Aristotle, motion is not mentioned. Arguably, one of A's little chapters, anticipated in the extensive discussion of the question in *de An.* 1.3–5, was required for the main diaphonia regarding the soul's motion including Aristotle's own view, while there was apparently no need to repeat the parallels to Plato's view. So in this sense the chapter is complete.

c Rationale–Structure of Chapter

The chapter is about the categories of action and passivity. The main division, or rather diaphonia, is between perpetual mobility on the one hand and immobility on the other, and recalls the diaphonia in A at S 1.13.1d = ch. 1.11.6–7, two lemmata of the chapter 'On causes', where according to Thales the First Cause is immobile, whereas the Stoics held it to be moving. See M–R 3.381, where it is pointed out that this diaphonia may represent a separate chapter of an earlier version. Our dilemmatic ch. 4.6 shows that two lemmata may indeed be sufficient for a diaphonic chapter, cf. ch. 4.7a, and in Book 2 chs. 2.8, 2.10, 2.12, and 2.18. We have seen that the soul's self-motion is already a theme in ch. 4.2. In ch. 4.2 as well as in the present chapter motion is taken in a strictly corporeal sense: there is no reference to thought or perception or emotion as motions of the soul.

Here, in ch. 4.6, both opposed doxai also sport an exception of their own, which to some extent conflicts with the general position in a sort of internal sub-diaeresis. Though the Platonic soul is perpetually moving, its (indwelling) mind is said to be immobile as far as locomotion is concerned. The Aristotelian soul is said to be immobile and prior to each kind of motion, yet is (exceptionally) able to participate in (loco)motion *per accidens*, just as the shapes and boundaries and forms of things do. These exceptions constitute a subsidiary point in the context of the debate of the soul's motion in general.

d Further Comments

Individual Points

§1 This Plato is a *Plato interpretatus*. The immobility of the Platonic *nous* is attested in e.g. Plutarch *An.Procr.* 1024C. This makes the evidence of the *Placita*, about contemporaneous with the genuine Plutarch, quite interesting, while the Plutarchan parallel reveals the impact of Middle Platonism also in the present lemma. We must however note that Plutarch speaks of the *Nous* of the World Soul, A of the *nous* of man. Its immobility explicitly pertains to locomotion, so thinking qua motion is not excluded. Aristotle, whose Immobile Mover is a *Nous*, ascribes an immobile *Nous* to Anaxagoras at *Phys.* 8.5 256b24–27.

For ἀεικίνητον rather than αὐτοκίνητον at Pl. *Phdr.* 245c see the definitive account of Haslam (1999) 265–267.

§2 Aristotle. P's abridgement does not do much harm, because ps.Justin (see *testes primi*) confirms the reading of S. The doxa reproduces Aristotle's doctrine remarkably well, esp. in the longer version extant in S: the shapes, boundaries and forms echo the colour and length mentioned as moving along with things as stated in Arist. *de An.* 1.3, and motion *per accidens* is indeed Aristotle's view of the motion permitted for soul.

e Other Evidence

The main opposition, between Plato and Aristotle, is echoed in various ways in the later literature; see esp. the long discussion at Macrobius *in Somn.* 2.12.16–2.16. The issue of the soul's motion is often treated together with that of its mortality or immortality, put in a different next chapter in the *Placita*. S coalesced the two chapters under a common heading, as is still visible from what is left of them at 1.49.7a–b.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

(1) The witnesses for P are P^B and P^Q. E and G did not excerpt this chapter. P has four lemmata, T five. Comparison with T shows that four name-labels, viz. Anaxagoras, Diogenes, Empedocles, and Xenocrates have been eliminated in the first lemma of P. Either through an unfortunate application of the technique of abridgement, or, perhaps no less likely, because of an accident in the transmission the name-label Heraclitus, attested by T, has been eliminated in what originally was the second lemma. This happened in the entire tradition of P (including P^Q), so at an early stage of the transmission. (For similar cases see Diels *DG* 64, and above at ch. 1.21, Commentary A(4)). The net result is that the return of the souls to the Soul of the All is attributed to Pythagoras and

Plato, acceptance of which fails to surprise in relation to the Middle Platonist or Neopythagoreanizing backdrop that is regularly to be discerned in the *Placita*. Because of the parallels in T we are again in a position to detect the birth or fabrication of a new, though spurious, doxa here in P. The theme of the chapter is anticipated at T 1.63, see ch. 1.3 Commentary A(5)(a).

(2) That T indeed used A here is proved beyond any doubt (1) by his two distinct paragraphs (§§1–2) and his preservation of the name-label Heraclitus (§2), fallen by the wayside in P's tradition inclusive of Q's copy of the Greek text, while in P, as we have seen, §2 has been unfortunately fused with §1. T cannot therefore have copied P here. The four extra names in T for §1 as compared with P also show that he abstracted A not P, unless one wants to avail oneself of the hypothesis that he imported them from somewhere else. But this move fails to neutralize the point about the blend of §1 with §2. For T's contribution see Mansfeld (2018a) at M–R 4.180–187, and esp. 4.184–186 on 4.7.1–2 and on the parallel case of extra names in T (and this time also in S) as compared with P in 2.1.1–2; also above, General Introduction section 2.5.

After ch. 4.7 no further chapters from Book 4 (or Book 5) are abstracted by T.

(3) S has only one lemma, parallel to P₁, a very brief and partly different one, in which he coalesces a single name-label (Plato) and the two different attributes of the soul (ἄφθαρτον and ἀεικίνητον) from §7.1 and §6.1, in that reversed order. For Wachsmuth's numbering and division into 7a, 7b, and 7c based on the chapters of A in the *DG* see ch. 4.6 Commentary A(2) above. Lactantius *Op.D.* 17.1 (see section E(b) General texts) and G c. 24 p. 613.15–16 ἀλλ' ὁ Πλάτων ἀεικίνητον καὶ οὐδέποτε διαφθαρσομένην interestingly provide a parallel for S's coalescence of the two chapters.

(4) The *testes secundi* are well-represented, but none of them (including ps.Justin) are particularly close to either P or A.

(5) The parallel evidence of G in the first non-*Placita* part of his compendium (see section E(a) General texts), equivalent to three lemmata in the order P 4–5–3, is useful, and he interestingly preserves the name-label Dicaearchus for §4. Though P's chapter was not abstracted by E, his reference to Xenophanes, Pythagoras and Anaxagoras at *PE* 14.15.11 may be a fuzzy reminiscence of P 4.7.

B Proximate Tradition and Sources

(1) *Proximate tradition*. The main division is also found in Cicero; further at G c. 24, *DG* p. 613.14–19, who opposes Epicurus and Dicaearchus (θνητὴν ... ψυχὴν) to Plato and the Stoics (ἀθάνατον—for the word cf. A 4.2.2), but corrects the Stoics lemma by adding—the sentence is mutilated—that the immortality of the soul lasts a whole cosmic period(?), but that this soul too will be destroyed (διαφθαρῆναι). The name-label Dicaearchus is lacking in P and T, but may have

been present in A because it is extant in G, who depends on the wider doxographical tradition as well. A further difference is that G has *θνητὴν* and *ἀθάνατον* where P and T have *ἄφθαρτον* and *φθαρτὴν*, though as we see G also has *διαφθαρήναι*. In G we seem to have an echo of the above-mentioned notion that immortality is not the same as indestructibility.

(2) *Sources*. In e.g. Plato's *Phaedo* (followed by many) the indestructibility of the soul is a large issue, in Aristotle's *De anima* it is not. The views of the Stoics and Epicurus and his followers are rather widely attested.

C Chapter Heading

Another umbrella heading (*περὶ τοῦ δεῖναι*) of the kind that dominates in the *Placita* (see above, ch. 1.3 Commentary C), but a precise one, focusing on a specific property. Found in P only, but note that S 49.7a *ad finem* combines the headings of chs. 4.6 and 4.7 into a single sub-heading of *Ecl.* ch. 1.49: 'On the movement and indestructibility of soul' (*Περὶ κινήσεως καὶ ἀφθαρσίας ψυχῆς*). A touch insufficient, because the chapter also deals with the destructibility of soul. Compare the similarly unsatisfactory heading of ch. 2.4, 'Whether the cosmos is indestructible' (*Εἰ ἄφθαρτος ὁ κόσμος*), on which see M–R 2.2.358, and ch. 2.4, Commentary C. See also ch. 5.26, Commentary D(b). The heading, title, or expression *Περὶ κινήσεως καὶ ἀφθαρσίας ψυχῆς* can be paralleled. It occurs at Philo *Somn.* 1.181 and Strabo 15.1.59 (Megasthenes *FGrH* 715 fr. 33 Jacoby, comparing a doctrine of the Brahmins with one of Plato, see M–R 2.1.37). As an embedded phrase ('eorum fit mentio quae proxime vel antecedunt vel sequuntur', Bonitz 95b33) such a formula is the predecessor or equivalent of the heading, or title, see M–R 2.1.48, 159–161, 162–163, 170, 202–204. The second book of a treatise with this title is cited for Numenius at Origen *CC* 5.57, p. 368.23–24 Marcovich, τῷ Πυθαγορείῳ Νουμηνίῳ ἐν τῷ δευτέρῳ Περὶ ἀφθαρσίας ψυχῆς (Numenius fr. 29 Des Places); see Des Places (1973) 117.

D Analysis

a Context

This is the last of the group of six chapters dealing with the soul *per se*. Together with ch. 4.6 it forms a sort of appendix in which remaining issues are mopped up, following on after the more substantial chs. 4.2–5. The *Placita* didactically separates themes that may be treated together in other literature, and often are, see Diels' acerbic remark cited in the Introduction to Book 1, section 2. The next series, chs. 4.8–12, continue the psychology by dealing in detail with the senses and sensation in general. In Aristotle's *De anima*, too, the discussion of sensation and the senses in Books 2.5–3.2 follows on after that of more general issues discussed in the previous Book and chapters.

b Number–Order of Lemmata

The four lemmata of P and the five of T, taking into account that P₁ is a misleading, or at any rate mistaken blend of two successive lemma, occur in exactly the same order, which therefore should correspond to the order of A. Whether originally there were more lemmata in A we cannot know, as S is almost entirely lost. T's Aëtian material on the soul ends at CAG 5.24 with three lemmata Diels printed at the bottom of *DG* 393 as the final section of 4.7, although they are not about this theme at all, but about the issue of whether and in what sense a soul may be attributed to plants, and whether plants may be called 'living beings', ζῶα. They are precisely paralleled at Clement *Strom.* 8.4.10.3–4; see Mansfeld (1990a) 3187–3190 and below, ch. 5.26 Commentary D(e).

c Rationale–Structure of Chapter

The category at issue is that of time. The main division, or rather diaphonia, is between the indestructibility of soul, as in §1 and less explicitly stated §2, and its destructibility as in §4. It constitutes a very clear example of A's method. In Aristotle's *De anima* this is not a prominent issue, see M–R 2.1.144. We note the diaeresis on a gliding scale: §1 soul indestructible, §2 soul eventually destroyed by absorption into Soul, §3 some souls immediately destroyed, others eventually by absorption into Soul, §4 souls immediately destroyed, §5 compromise: a part of soul indestructible, another part destructible. Actually the final lemma, placed in the standard compromise position at the end of the chapter, renders the diaphonia harmless by accepting both contrasting qualifications, viz. by positing that one part of the soul is indestructible and another is not.

d Further Comments

Individual Points

§§1 & 5 The contrast between lemmata 1 and 5, viz. on the one hand the tenet of (Pythagoras and) Plato that the whole soul is indestructible and on the other the tenet that this only holds for its rational part mirrors the development of Plato's unitary soul, as in *Phaedo*, to one with parts, as in *Republic* and *Ti-maeus* (though in §5 there is no emphasis on differing locations for the parts as developed in the latter work).

§§1–2 See above at section A(2) on Theodoret's use of A.

§1 Alcmaeon's acceptance of the view that the soul is immortal (ἀθάνατον not ἄφθαρτον) was included at ch. 4.2.2, and is not repeated here. The doctrine is attributed to both Plato's purported master Pherecydes (in Cicero) and Thales (in Diogenes Laertius), as archegete of respectively the Italic/Pythagorean and

the Ionian Succession, see section E(a)§1. At ch. 4.2.1 (where see for further information Commentary D(d)§1) the view that ‘the soul is ever-moving or rather self-moved’ is also attributed to Thales, and *ibid.* 4.2.2, name-label Alcmaeon, the soul’s self-motion proves its immortality—which explains by what sort of reasoning this view came to be attributed to Thales as well. A here has gathered quite an impressive number of supporters for it.

For Plato the indestructibility of the soul has to be proved separately, see e.g. *Phd.* 96b, while Strato physicus (*ap.* Damascius *in Phd.* (versio 1) sect. 438, p. 231 Westerink = fr. 123h Wehrli, 80.185 Sharples) states that a stone, though immortal (ἀθάνατος), i.e. not ‘dying’, is not ‘indestructible’ (ἀνώλεθρος). Though these words can be used interchangeably, their meanings were sometimes carefully distinguished, e.g. Aristotle *Cael.* 2.1 284a11–13 ‘the ancients assigned heaven, the upper region, to the gods, in the belief that it alone is immortal; our present argument attests that it is indestructible and ungenerated’ (tr. Guthrie LCL modified: τὸν δ’ οὐρανὸν καὶ τὸν ἄνω τόπον οἱ μὲν ἀρχαῖοι τοῖς θεοῖς ἀπένειμαν ὡς ὄντα μόνον ἀθάνατον· ὁ δὲ νῦν μαρτυρεῖ λόγος ὡς ἀφθαρτος καὶ ἀγέννητος). Alexander of Aphrodisias(?) *de An.Mant.* 108.30–109.1, however, attributes to Aristotle the view that the mind which enters from outside is ‘immortal’ (εἰκότως ἀθάνατος ὑπ’ Ἀριστοτέλους καλεῖται νοῦς). Sharples (2008) 151 refers to Aristotle *de An.* 3.5 430a23, ‘and only that is immortal and everlasting’ (καὶ τοῦτο μόνον ἀθάνατον καὶ αἰδῖον). Note that Aristotle carefully adds ‘everlasting’ to ‘immortal’, and that Cicero, aware of this problem, translates *Phdr.* 245c τὸ γὰρ ἀεικίνητον ἀθάνατον as *nam quod semper movetur, aeternum est*, not as *immortale est* (*Resp.* 6.27 = *Somn.Scip.*). Damascius reports Strato’s argument, but other late Platonists often just go on to speak of the soul’s ‘immortality’. Plato’s argument, variously reproduced by later Platonists in syllogistic form (listed Macrobius *in Somn.* 2,13.9–12), in later commentators (from Hermias to John Philoponus) ended up as a mere example of a syllogism; for some texts see below, section E(b)§1. Commentators on Macrobius (Flamant 1977, Regali 1990, Armisen-Marchetti 2003), who argue that the Platonists mentioned here by Macrobius are fictional, have overlooked the late followers.

For the attribution to Aristotle of the view that the intellect enters from outside see below, ch. 7a, Commentary D(d)§1, and M–R 2.1.144.

According to Anaxagoras as cited at ch. 5.25.2 the soul is mortal, like the body: this conflicts with the first lemma of the present chapter, where the presence of the name-label is in fact surprising.

§2 Compare the Heraclitus lemma ch. 4.3.14 and our remarks there at Commentary D(d)§14. Our sources now go a quite significant step further, for here human souls are said to return to the Soul of the universe; cf. Dörrie-Baltes (2002) 2.190, 416–417, and for parallels section D(e) below. We have seen that

Aristotle cautiously suggested that Thales said that ‘everything is full of gods’ because like ‘some people, he believed that the soul is intermingled with the whole universe’ (*de An.* 1.2 411a7–8).

T goes further than P in adding ὁμοούσιον, ‘con-substantial’, to ὁμογενές (Heraclitus fr. 66 (*f*³) n. 2 Marcovich). The word ὁμοούσιος does not occur before the first cent. CE; it is not uncommon in Irenaeus and Origen, and may be thought to belong with bishop Theodoret’s theological vocabulary. But it occurs in a comparable way in Plotinus *Enn.* 4.7[2].10.19, διὰ συγγένειαν καὶ τὸ ὁμοούσιον (sc. τῆς ψυχῆς τοῖς θεοῖς), so could have entered the open *Placita* tradition before T’s time. On the term in Gnostic, Hermetic and Christian literature before T see Beatrice (2002), who on its use in Plotinus, Porphyry and Iamblichus points out (p. 257): ‘only in the general meaning of “made of the same nature” or “of the same substance”, without any particular theological connotation’. Aristotle’s question about affinity (402b2, ὁμοειδής) is different. The context shows that he is not thinking of souls as parts of a super-Soul, but of parts, or components, of the single human soul, which (as the component elements of Empedocles’ cognitive faculty at *de An.* 1.2 404b12) may be characterised as individual souls themselves.

§3 For the Stoic view see the parallel passages collected by Pease *ad Cic. ND* 1.27 and the texts collected at *SVF* 2.809–822. We have restored the text *ad probabilem sententiam*, bracketing the superfluous γίνεσθαι (which is also odd: cf. Philo *Somn.* 1.31 συμφθίρεται and ps.Alexander fr. 2 Vitelli φθείρεσθαι σὺν τοῖς φθειρομένοις), and we have borrowed ἐπιδιαμένειν from the parallel accounts in Diogenes of Oenoanda, Diogenes Laertius, Hippolytus, and Origen (ἐπιμένειν or διαμένειν, found in G and AD, are also possible); see texts below at section E(a)§3. The close parallel with the physical section of the Stoic doxography at Diogenes Laertius *V.P.* 7.156–157 was indicated by Von Arnim, who prints §3 as *SVF* 2.810 and part of the Diogenes passage as *SVF* 2.811, though he also divides it over *SVF* 1.171, 1.522, and 2.774.

§4 Aristotle restricted indestructibility to a part (or function) of *nous*, *de An.* 3.5.

§5 For a generous discussion of the differences between Plato and Aristotle concerning the immortality of the soul see Atticus fr. 7 Des Places at Eusebius *PE* 15.9.

For the view sometimes (wrongly) attributed to Plato that the soul is a god cf. Tertullian *de An.* 24.1–2. For the idea see the poetic line attributed to Euripides or Menander, quoted by various authors (see Kannicht 2004, 2.988 ad loc.). For Diogenes of Apollonia see ad ch. 4.3 above, Commentary D(d)§14. That the World Soul is a god is Stoic doctrine; that the human soul (or a part of the human soul) is a god, or at least divine, can be concluded from the fact that

according to the Stoics the human soul is a part of the divine Soul (*SVF* 2.774, quoted at §2 above). A's rejection, in line with Plato's account in the *Timaeus*, where the soul is the creation of the Demiurge, is explicit, and may have an anti-Stoic point. For the Plutarchean parallel cited at section E(b)§5 below see Ferrari (1996). The formula 'the product of the eternal God' sounds Christian, but here only blends, in a Middle Platonist way, the Demiurge who produces both the World Soul and human souls in the *Timaeus* with Aristotle's First God: we only have the term 'product', not the act of creation.

e Other Evidence

There are several parallels for the doctrine ascribed to Heraclitus at §2. Macrobius in *Somn.* 1.14.19 on the soul according to *Heraclitus physicus* as 'a spark of stellar essence' (*scintillam stellaris essentiae*) may be due to Stoic influence. Cf. Seneca *Dial.* 8.5.5 'or whether that theory is true which strives especially to prove that man is part of the divine spirit, and that some sparks, as it were, of the stars fell down to earth and remained in a strange place' (tr. Basore *LCL*, slightly modified). Or due to the influence of Platonism, cf. Plato *Tim.* 41d–42b, Cicero *Resp.* 6.15 (= *Somn. Scip.*) 'humans, ... and to them has the mind been given from those eternal fires you call constellations and stars' (*homines ..., eis que animus datus est ex illis sempiternis ignibus, quae sidera et stellas vocatis*). Or of later Platonism, e.g. Numenius (fr. 31 Des Places at Porph. *Antr.* 21–23) and Porphyry (e.g. in *Tim.* 1 frs. 16, 22, 2. fr. 80 Sodano), who have the soul descend to the body through a star. Or of all of these together. On the scattered evidence for astral immortality see Burkert (1972) 360–368. See also Tardieu (1975), who mainly discusses Gnostic examples, cites the passage of Seneca, and hypothesizes that the metaphor of the 'spark of soul', *scintilla animae*, is originally Platonic. But his evidence for this hypothesis consists of Proclus' interpretation of souls as stars in the myth of Er.

Seneca's formula 'in a strange place' (*in alieno loco*) is Platonic or Pythagorean rather than Stoic. The expression is paralleled in the Aenesidemean account of Heraclitus in Sextus Empiricus *M.* 7.130, where the inhaled portion of the Divine Logos is said to be 'a stranger in our bodies' (ἡ ἐπιξενωθεῖσα τοῖς ἡμετέροις σώμασιν ἀπὸ τοῦ περιέχοντος μοῖρα). Also compare Philo *Agr.* 65 (on Gen 47:4, παροικεῖν, οὐ κατοικεῖν ἤλθομεν, 'we have come to dwell as strangers, not as inhabitants'): 'in reality each soul of a wise man has won heaven as its fatherland and been given earth as a foreign country, and it regards the house of wisdom as its own but the body as foreign, believing it dwells there as in a foreign country' (τῷ γὰρ ὄντι πάντα ψυχὴ σοφοῦ πατρίδα μὲν οὐρανόν, ξένην δὲ γῆν ἔλαχε, καὶ νομίζει τὸν μὲν σοφίας οἶκον ἴδιον, τὸν δὲ σώματος ὀθνείον, ᾧ καὶ παρεπιδημεῖν οἴεται). And Plutarch *Ex.* 607C–D (commenting on the lines of Emp. 31B115

DK he quotes): ‘we are strangers and fugitives ... ; as the soul has come here from elsewhere he kindly calls its birth a “journey to foreign country”’ (ξένους καὶ φυγάδας ἡμᾶς ὄντας ... τῆς δὲ ψυχῆς ἀλλαχόθεν ἡκούσης δεῦρο τὴν γένεσιν ἀποδημίαν ὑποκορίζεται τῷ πρασιότατῳ τῶν ὀνομάτων). A different evaluation is found at *Tranq.* 477C, where the wise man ‘despises those who bewail life as a place of evils or a place of exile for our souls’ (καταφρονεῖ τῶν ὀδυρομένων καὶ λοιδορούντων τὸν βίον, ὥς τινα κακῶν χώραν ἢ φυγαδικὸν τόπον ἐνταῦθα ταῖς ψυχαῖς ἀποδεδιγμένον). See further Mansfeld (2015c) at Mansfeld (2018d) 231–233.

For the conflict between Plato and Aristotle see above, ch. 4.6 Commentary D(e), where the question of immortality vs. mortality hinges on that of (self-)motion.

Ptolemy allows himself a parody of the Stoic doctrine, in which the soul is immediately dispersed, while the body continues to exist (note the verbal form ἐπιδιαμένον); cited below section E(b)§3.

E Further Related Texts

a Proximate Tradition

General texts: Cicero *Luc.* 124 ... *et quidquid est, mortale sit an aeternum, nam utramque in partem multa dicuntur.* *Tusc.* 1.18 *sunt enim qui discessum animi a corpore putent esse mortem; sunt qui nullum censeant fieri discessum, sed una animum et corpus occidere, animumque in corpore extinguī. qui discedere animum censent, alii statim dissipari, alii diu permanere, alii semper.* *Tusc.* 1.26–58. *Tusc.* 1.76–79. Philo of Alexandria *Somn.* 1.31 τί δέ; τελευτώντων σβέννυται καὶ συμφθείρεται τοῖς σώμασιν ἢ πλείστον ἐπιβιοῖ χρόνον ἢ κατὰ τὸ παντελές ἀφθαρτόν ἐστι; *Cher.* 114 ποῖ δὲ χωρήσει (sc. the soul), πόσον δὲ χρόνον ἡμῖν ὁμοδιαίτος ἔσται; Seneca *Ep.* 88.34 *innumerabiles quaestiones sunt de animo tantum: ... quamdiu sit, aliunde alio transeat et domicilia mutet in alias animalium formas aliasque coniectus, an non amplius quam semel serviat et emissus vagetur in toto; ... quid sit facturus cum per nos aliquid facere desiderit, quomodo libertate sua usus cum ex hac effugerit cavea.* Galen *QAM c.* 3, p. 13.12–16 Βαζου ὅτι δ’ ἐκ τούτων τῶν εἰδῶν τε καὶ μερῶν τῆς ὅλης ψυχῆς τὸ λογιστικὸν ἀθάνατόν ἐστι, Πλάτων μὲν φαίνεται πεπεισμένος, ἐγὼ δ’ οὐθ’ ὥς ἔστιν οὐθ’ ὥς οὐκ ἔστιν ἔχω διατείνεσθαι πρὸς αὐτόν. *Propr.Plac.* 3, p. 173.16–18 Boudon-Millot–Pietrobelli, text Lami ἥτις δ’ ἐστὶν ἡ οὐσία τῆς ψυχῆς ἀγνοεῖν ὁμολογῶ, καὶ πολὺ γε μάλλον, εἰ ἀθάνατος ἐστὶν ἢ θνητή. *Propr.Plac.* 7, p. 179.14–16 Boudon-Millot–Pietrobelli, text Lami καθάπερ οὖν ἱατρῷ περ(ι)τὸν γινώσκειν εἴτ’ ἀθάνατός ἐστιν ἡ ψυχὴ εἴτ’ οὐκ ἀθάνατος πρὸς τὰς ἰάσεις. *Propr.Plac.* 15, p. 188.26–35 Boudon-Millot–Pietrobelli, text Lami (= *Sub.Nat.Fac.* 4.762.16–763.7 K.) τὴν γε μὴν ψυχὴν, εἰ μὲν ἀθάνατος οὐσα ταῖς σωματικαῖς οὐσίαις κεραννυμένη τὰ ζῶα διοικεῖ, γινώσκειν βεβαίως οὐκ ἀπαγγέλλομαι, καθάπερ οὐδὲ εἰ μηδεμία καθ’ ἑαυτὴν ἐστὶν ἡ οὐσία ψυχῆς· ἐκεῖνο μέντοι φαίνεται μοι σαφῶς ὅτι, καθὼς εἰσοικίζηται τοῖς σώμασι, δουλεύει ταῖς φύσεσιν αὐτῶν, αἵπερ εἰσιν, ὥς ἔφη, ἐκ τῆς τῶν τετ-

τάρων στοιχείων ποιᾶς κράσεως γιγνόμεναι. καὶ κατὰ γε τοῦτο πρὸς τὴν ἰατρικὴν τέχνην οὐδὲν ἡγοῦμαι βλαβήσεσθαι τινα διὰ τὴν ἄγνοιαν τῆς καλουμένης ἐμψυχώσεώς τε καὶ μετεμψυχώσεως. **Sextus Empiricus** *M.* 9.72–73 (*SVF* 2.812) καὶ (sc. according to the Stoics) καθ' αὐτὰς δὲ διαμένουσι καὶ οὐχ, ὥς ἔλεγεν ὁ Ἐπίκουρος (fr. 337 Usener), ἀπολυθεῖσαι τῶν σωμάτων καπνοῦ δίκην σκιδνάνται. οὐδὲ γὰρ πρότερον τὸ σῶμα διακρατητικὸν ἦν αὐτῶν, ἀλλ' αὐταὶ τῷ σώματι συμμονῆς ἦσαν αἷται, πολὺ δὲ πρότερον καὶ ἑαυταῖς. *P* 1.151 δογματικὰς δὲ ὑπολήψεις ἀλλήλῃς ἀντιτίθεμεν, ὅταν λέγωμεν ... τοὺς μὲν θνητὴν τὴν ψυχὴν (sc. ἀποφαίνεσθαι), τοὺς δὲ ἀθάνατον. **Hippolytus** *Ref.* 1.2.11 οὗτος (sc. ὁ Πυθαγόρας) καὶ ψυχὴν ἀθάνατον εἶπε καὶ μετενσωμάτωσιν κτλ. *Ref.* 1.19.10 (on Plato's followers) καὶ τὴν ψυχὴν οἱ μὲν φασιν αὐτὸν ἀγέννητον λέγειν καὶ ἀφθαρτον, ὅταν λέγῃ (*Phdr.* 245c)· 'ψυχὴ πάσα ἀθάνατος· τὸ γὰρ ἀεικίνητον ἀθάνατον' καὶ ὅταν αὐτοκίνητον αὐτὴν ἀποδεικνύῃ καὶ ἀρχὴν κινήσεως· οἱ δὲ γενετὴν μὲν, ἀφθαρτον δὲ διὰ τὴν τοῦ θεοῦ βούλησιν. οἱ δὲ σύνθετον καὶ γενετὴν καὶ φθαρτὴν κτλ. *Ref.* 6.25.4 λέγει δὲ Πυθαγόρας ... εἶναι δὲ αὐτὰς (sc. τὰς ψυχὰς) θνητὰς μὲν, ὅταν ὦσιν ἐν τῷ σώματι—οἷον ἐγκατορωρυγμένας {ὡς} ἐν τάφῳ—, ἀνίστασθαι δὲ καὶ γίνεσθαι ἀθανάτους, ὅταν τῶν σωμάτων ἀπολυθῶσιν. *Ref.* 1.20.3–4 (on Aristotle) καὶ σχεδὸν τὰ πλεῖστα τῷ Πλάτῳ σύμφωνός ἐστιν πλὴν τοῦ περὶ ψυχῆς δόγματος· (4) ὁ μὲν γὰρ Πλάτων ἀθάνατον, ὁ δὲ Ἀριστοτέλης ἐπιδιαμένειν (***) καὶ μετὰ ταῦτα καὶ ταύτην ἐναφανίζεσθαι τῷ πέμπτῳ σώματι, ὃ ὑποτίθεται εἶναι μετὰ τῶν ἄλλων τεσσάρων, τοῦ τε πυρὸς καὶ τῆς γῆς καὶ τοῦ ὕδατος καὶ τοῦ ἀέρος λεπτότερον, οἷον πνεῦμα. *Ref.* 6.26.3 (on Pythagoras) δύνασθαι οὖν φησί ποτε τὴν ψυχὴν καὶ θνητὴν γενέσθαι, ἐὰν ὑπὸ τῶν Ἑρινύων κρατῇται—τουτέστι τῶν παθῶν—, καὶ ἀθάνατον, ἐὰν τὰς Ἑρινύς ἐκφύγῃ, ἃ ἐστι (τὰ) πάθη. **Hermogenes** *Id.* 1.6.8.3–4 Patillon οἷον εἰ περὶ ψυχῆς, ὅτι ἀθάνατος. **Tertullian** *de An.* 3.2 *alii immortalem negant animam, alii plus quam immortalem adfirmant.* *de An.* 51.1–2 *sed quidam ad immortalitatem animae, quam quidem non a deo edocti infirmes tumentur, ita argumentationes emendicant, ut velint credi etiam post mortem quasdam animas adhaerere corporibus.* (2) *ad hoc enim et Plato, etsi quas vult animas ad caelum statim expedit, in Politia tamen cuiusdam insepulti cadaver opponit longo tempore sine ulla labe prae animae scilicet individuitate (sic; Resp. 614b is different) servatum. ad hoc et Democritus (68A16o DK) crementa unguium et comarum in sepulturis aliquanti temporis denotat.* *de An.* 54.1–2 *omnes ferme philosophi, qui immortalitatem animae, qualiter volunt, tamen vindicant, ut Pythagoras (—), ut Empedocles (—), ut Plato, quique aliquod illi tempus indulgent ab excessu usque in conflagrationem universitatis, ut Stoici (SVF 2.814), suas solas, id est sapientium, animas in supernis mansionibus collocant.* (2) *Plato quidem non temere philosophorum animabus hoc praestat, sed eorum qui philosophiam scilicet exornaverint amore puerorum. ... itaque apud illum in aethera sublimantur animae sapientes, apud Arium (?AD fr. 39 Diels) in aërem, apud Stoicos (SVF 2.814) sub lunam.* **Arnobius** *Adv.Nat.* 1.38, p. 33.16–20 Marchesi (*qui ... monstravit*) *mortis particeps degat an immortalitatis perpetuitate donata sit* (sc. anima), *qui status nos maneat, cum dissolutis abierimus a membris, visuri ne nos sumus an memoriam nullam nostri*

*sensus et recordationem habituri. Adv.Nat. 2.57, pp. 131.16–132.2 non alia neque absimili ratione de animarum ab his condicione disseritur. hic enim eas retur et esse perpetuas et superesse mortalium functioni, superesse ille non credit, sed cum ipsis corporibus interire: alterius vero sententia est nihil eas continuo perire, sed post hominem positum aliquid eis ad vitam dari, mortalitatis deinde in iura succedere. et cum omnia nequeant veri esse consortia, ita tamen fortibus et validissimis probationibus omnes agunt, ut repperire non possis quidnam tibi videatur falsum, quamvis ex omni parte diversa dici aspicias et rerum contrarietatibus dissonare. Lactantius Op.D. 17.1 nec ... immortalem esse animam non intelligemus, quoniam quidquid viget moveturque per se semper nec videri nec tangi potest, aeternum sit necesse est. Inst. 7.7.12–14 immortales esse animas Pherecydes (fr. 85a Schibli) et Plato disputaverunt: haec vero propria est in nostra religione doctrina. ergo Dicaearchus (fr. 10b Wehrli 29 Mirhady) cum Democrito (fr. 466 Luria) erravit, qui perire cum corpore ac dissolui argumentatus est (cf. Cic. Tusc. 1.38–41). (13) esse inferos Zeno Stoicus (SVF 1.147) docuit et sedes piorum ab impiis esse discretas et illos quidem quietas ac delectabiles incolere regiones, hos vero luere poenas in tenebrosis locis atque in caeni voraginibus horrendis: idem nobis prophetae palam faciunt. ergo Epicurus (fr. 341 Usener) erravit, qui poetarum id esse figmentum putavit et illas inferorum poenas quae ferantur in hac esse vita interpretatus est (cf. Lucr. DRN 3.978–1023). (14) totam igitur veritatem et omne divinae religionis arcanum philosophi attigerunt, sed aliis refellentibus defendere id quod invenerant nequiverunt, quia singulis ratio non quadravit, nec ea quae vera senserant in summam redigere potuerunt, sicut nos superius fecimus. Iamblichus de An. fr. 36 Finamore–Dillon at Stob. Ecl. 1.49.43, p. 383.15–22 ἐν ταύτῳ· Περὶ θανάτου. ἐπειδὴν μετὰ τὸν τῆδε βίον ἡ τελευτὴ συμπίπτῃ, τί ποτε συμβαίνόν ἐστι; πότερον ὥσπερ ἐν τῇ γενέσει προϋπῆρχεν ἢ συνυφίστατο ἢ ὑστέρα πως ἐπεγίγνετο τοῖς σώμασιν ἢ ψυχῇ κατὰ τὰς διαφόρους αἱρέσεις, οὕτω καὶ ἐν τῷ ἀποθνήσκειν προφθεύρεται τοῦ σώματος ἢ συναπόλλυται αὐτῷ ἢ καὶ διαμένει καθ' ἑαυτὴν μετὰ τὴν ἐνθνήδε ἔξοδον; τὸ μὲν οὖν πᾶν κεφάλαιον τοιοῦτον· μέρη δὲ αὐτοῦ καὶ ἡ κατὰ τὰ εἶδη διαίρεσις δέχεται πολλὰς τοιαύτας ἀμφισβητήσεις (continued below, section E(b) §3). Eusebius PE 14.15.11 πλὴν ἀλλὰ φυσικοὶ καὶ ἄλλοι Ξενοφάνης (—) καὶ Πυθαγόρας (—), συνακμάσαντες Ἀναξαγόρα (—), περὶ ἀφθαρσίας θεοῦ καὶ ψυχῆς ἀθανασίας ἐφιλοσόφησαν. Nemesius NH 2, pp. 23.24–24.4 Γαληνὸς δὲ ἀποφαίνεται μὲν οὐδέν, ἀλλὰ καὶ διαμαρτύρεται ἐν τοῖς Ἀποδεικτικοῖς λόγοις ὡς οὐδὲν εἶη περὶ ψυχῆς ἀποφηνάμενος· ἔοικε δέ, ἐξ ὧν λέγει, δοκιμάζειν μᾶλλον τὸ κράσιν εἶναι τὴν ψυχὴν (ταύτῃ γὰρ ἐπακολουθεῖν τὴν τῶν ἡθῶν διαφορὰν), ἐκ τῶν Ἱπποκράτους κατασκευάζων τὸν λόγον. εἰ δὲ τοῦτο, δῆλον ὅτι καὶ θνητὴν αὐτὴν εἶναι οἶεται, οὐ πᾶσαν δέ, ἀλλὰ τὴν ἄλογον μόνην ψυχὴν τοῦ ἀνθρώπου. περὶ δὲ τῆς λογικῆς ἀμφιβάλλει, λέγων οὕτως· (***) (sed cf. Galen QAM c. 4, p. 26.9–27.1 Bazou Ἀνδρόνικον δὲ τὸν Περιπατητικόν, ὅτι μὲν ὅλως ἐτόλμησεν ἀποφηνᾶσθαι τὴν οὐσίαν τῆς ψυχῆς ... ἐπαίνω τε πάνυ ..., ὅτι δ' ἦτοι κράσιν εἶναι φησιν ἢ δύναμιν ἐπομένην τῇ κράσει, μέφομαι τῇ προσθέσει τῆς δυνάμεως). ps.Galen HPh c. 24, DG p. 613.12–17 θνητὴν μὲν ψυχὴν ὁ Ἐπίκουρος (—) καὶ Δικαίαρχος (fr. 10a Wehrli, 28 Mirhady) ᾤθησαν, ἀθάνατον δὲ Πλάτων καὶ οἱ*

Στωικοί (—). ἀλλ' ὁ Πλάτων ἀεικίνητον καὶ οὐδέποτε διαφθαρησομένην. οἱ Στωικοὶ δὲ καθ' ἐκάστην τοῦ κόσμου μεταβολὴν διαμένειν ἀθάνατον, ἕως ἂν (ἦ) ἡ τοῦ κόσμου μεταβολὴ συστάσῃ *** καὶ αὐτὴν τυχεῖν διαφθαρῆναι ᾧθήσαν. **Augustine Trin.** 10.7.17–24 *Mountain–Glorie eique omnes eam mortalem esse senserunt quia sive corpus esset sive aliqua compositio corporis non posset utique immortaliter permanere. qui vero eius substantiam vitam quandam nequaquam corpoream ... reppererunt, consequenter et immortalem ... probare conati sunt.* **Servius auctus in Aen.** 4.705, p. 586.1–6 Thilo 'in ventos vita recessit' id est anima, ut in quarto Georgicorum (4.224) 'quemque sibi tenues nascentem arcessere vitas'. et dicendo 'in ventos' aut eos sequitur, qui animam aërem dicunt, hoc est in materiam suam rediit: aut certe eos qui dicunt animam perire cum corpore, ut intellegamus 'evanuit, in ventos recessit', ut in nono (Aen. 9.312–313) 'sed aurae omnia discernunt'. **Commenta Bernensia in Lucanum** p. 289.3–14 Usener (on Phars. 9.1) alii existimant animas statim elisas corpore solvi ac dissipari in principia sua, inter quos Epicurus (—). alii solidas quidem, postquam exierint de corpore, permanere, sed deinde tractu temporis dissipari: haec opinio Stoicorum (SVF 2.817). alii integras decedere, sicuti venerint in corpora, et semper manere. haec auctoritas in duas opiniones scinditur. alii enim dicunt liberatas a vinculo corporis in caelum reverti, inter quos sunt Peripatetici et cum Platone suo Academici. alii ire per corpora multorum animalium, quadringentesimo sexagesimo et altero anno rursus in corpora reverti humana: huius opinionis conditor Pythagoras. p. 290.18–22 Usener (ad Phars. 9.6; cf. below) mixtum dogma cum Platónico Stoicorum (—). qui virorum fortium animas existimant in modum siderum vagari in aëre et esse sic inmortales, ut non moriantur sed resolvantur, secundum Platonem ne resolvantur quidem.

§1 + §3 **Pythagoras Anaxagoras Diogenes Plato Empedocles Xenocrates Stoics: Tertullian de An.** 3.2 hi exitum aliorum abducunt. de An. 54.1 omnes ferme philosophi, qui immortalitatem animae [...] vindicant, ut Pythagoras (—), ut Empedocles (—), ut Plato, quique aliquod illi tempus indulgent ab excessu usque in conflagrationem universitatis, ut Stoici (—), suas solas, id est sapientium, animas in supernis mansionibus collocant.

§1 **Pythagoras Anaxagoras Diogenes Plato Empedocles Xenocrates: Cicero Tusc.** 1.38–39 Pherecydes Syrius (7A5 DK) primus dixit animos esse hominum sempiternos hanc opinionem discipulus eius Pythagoras (—) maxime confirmavit. ... (39) Platonem ferunt, ut Pythagoreos cognosceret, in Italiam venisse et didicisse Pythagorea omnia primumque de animorum aeternitate non solum sensisse idem quod Pythagoram, sed rationem etiam attulisse. Tusc. 5.38 humanus autem animus decerptus ex mente divina cum alio nullo nisi cum ipso deo, si hoc fas est dictu, comparari potest. Div. 1.110 altera divinatio est naturalis, ut ante dixi; quae physica disputandi subtilitate referenda est ad naturam deorum, a qua, ut doctissimis sapientissimisque placuit, haustos animos et libatos habemus; cumque omnia completa et referta sint aeterno sensu et mente divina, necesse est cognitione divinorum animorum animos humanos commoveri. **Diogenes Laertius V.P.** 1.24 (on Thales, 11A1 DK) ἔνιοι δὲ καὶ αὐτὸν

πρώτον εἰπεῖν φασιν ἀθανάτους τὰς ψυχάς· ὧν ἐστὶ Χοιρίλος ὁ ποιητής (fr. 12 Bernabé). *Commenta Bernensia in Lucanum* p. 289.7–8 Usener (cf. above, General texts) *alii integras* (sc. animas) *decedere, sicuti venerint in corpora, et semper manere*.

§2 **Heraclitus: Cicero** ND 1.27 *Pythagoras, qui censuit animum esse per naturam rerum omnem intentum et commeantem, ex quo nostri animi carperentur*. **Macrobius in Somn.** 1.14.20 *Heraclitus physicus* (22A15 DK) *scintillam stellari essentiae*. *Commenta Bernensia in Lucanum* p. 288.9–11 Usener (cf. above, General texts) *alii enim dicunt* (sc. animas) *liberatas a vinculo corporis in caelum reverti, inter quos sunt Peripatetici et cum Platone suo Academici*.

§3 **Stoics: Cicero** Tusc. 1.77 *Stoici ... diu mansuros aiunt animos, semper negant*. **Arius Didymus** fr. 39.6–7 Diels, DG p. 471.18–24 at Eus. PE 15.20.6–7 τὴν δὲ ψυχὴν γεννητὴν τε καὶ φθαρτὴν λέγουσιν (SVF 2.809). οὐκ εὐθὺς δὲ τοῦ σώματος ἀπαλλαγείσαν φεῖρεσθαι, ἀλλ’ ἐπιμένειν τινὰς χρόνους καθ’ ἑαυτήν· τὴν μὲν τῶν σπουδαίων μέχρι τῆς εἰς πῦρ ἀναλύσεως τῶν πάντων, τὴν δὲ τῶν ἀφρόνων πρὸς ποσοῦς τινὰς χρόνους. (7) τὸ δὲ διαμένειν τὰς ψυχὰς οὕτως λέγουσιν, ὅτι διαμένομεν ἡμεῖς ψυχαὶ γενομένοι τοῦ σώματος χωρισθέντες καὶ εἰς ἐλάττω μεταβαλόντες οὐσίαν τὴν τῆς ψυχῆς, τὰς δὲ τῶν ἀφρόνων καὶ ἀλόγων ζῶων ψυχὰς συναπόλλυσθαι τοῖς σώμασι. **Diogenes of Oenoanda** fr. 39.iii.13–iv.12 Smith οἱ Στ[ω]ικοί δὲ | ([κ]αὶ γὰρ ἐντ[αῦθα] καὶ νώτερα λ[έ]γειν ἄλ[λ]ων θέλ[ο]υσιν) ἀπλῶ[ς] | μὲν ἀφθ[ά]ρτους οὐ | φασὶ τὰς [ψυ]χὰς, ἥδη | δὲ τὰς με[τ] τῶν ἀφ[υ]ῶν εὐθέως μετὰ τῇ[ν] | διάκρισιν τοῦ σώματος φεῖρεσθαι λέ[γου]σιν, τὰς δὲ τῶν σπ[ου]δαιῶν ἐπιδιαμένειν | ἀνδρῶν, καὶ αὐτὰς | δὲ φεῖρεσθαι ποτε. **Diogenes Laertius** V.P. 7.156 (physical section) (SVF 2.774) τὴν δὲ ψυχὴν αἰσθητικὴν (φύσιν add. ab Arnim non prob. Dorandi). ταύτην δὲ εἶναι τὸ συμφυὲς ἡμῖν πνεῦμα· διὸ καὶ σῶμα εἶναι καὶ μετὰ τὸν θάνατον ἐπιμένειν· φθαρτὴν δὲ ὑπάρχειν. τὴν δὲ τῶν ὅλων ἀφθαρτον, ἥς μέρη εἶναι τὰς ἐν τοῖς ζῴοις. V.P. 7.157 Κλεάνθης (SVF 1.522) μὲν οὖν πάσας ἐπιδιαμένειν μέχρι (τῆς) ἐκπυρώσεως, Χρύσιππος (SVF 2.811) δὲ τὰς τῶν σοφῶν μόνων. **Hippolytus** Ref. 1.21.3 τὴν δὲ ψυχὴν λέγουσι (SVF 2.807) μὲν ἀθάνατον, εἶναι δὲ σῶμα καὶ γενέσθαι ἐκ τῆς περιψύξεως τοῦ ἀέρος τοῦ περιέχοντος· διὸ καὶ καλεῖσθαι ψυχὴν. **Iamblichus de An.** fr. 36 Finamore–Dillon at Stob. Ecl. 1.49.43, p. 383.24–384.2 ἀρὰ γε πνιγμῶ τῶν ἀρτηρίων ἀποκλειομένων τοῦ δέχεσθαι τὸ ἐκτὸς πνεῦμα, ἢ ἐκλυομένου τοῦ τόνου καὶ παριεμένου, ἢ τοῦ θερμοῦ ἐναποσβεννυμένου πως εἰς τὰ εἶσω τὰ ζῶντα πρότερον εἰσαύθις ἀποθνήσκει; ἀλλ’ εἰ οὕτως γίνεται ὁ θάνατος, προαναίρεται ἢ συναναίρεται ἢ ψυχὴ τῷ σώματι, καθάπερ Κουρνούτος οἶεται. **Theodoret** CAG 5.26 (= AD fr. 39.6 at Eus. PE 15.20.6–7, wrongly attributed to Numenius, see text cited above) τὴν δὲ ψυχὴν γεννητὴν τε καὶ φθαρτὴν λέγουσιν. οὐκ εὐθὺς δὲ τοῦ σώματος ἀπαλλαγείσαν φεῖρεσθαι, ἀλλ’ ἐπιμένειν τινὰς χρόνους καθ’ ἑαυτήν· τὴν μὲν τῶν σπουδαίων μέχρι τῆς εἰς πῦρ ἀναλύσεως τῶν πάντων, τὴν δὲ τῶν ἀφρόνων πρὸς ποσοῦς τινὰς χρόνους. τὸ δὲ διαμένειν τὰς ψυχὰς οὕτως λέγουσιν, ὅτι διαμένομεν ἡμεῖς ψυχαὶ γενομένοι τοῦ σώματος χωρισθέντες καὶ εἰς ἐλάττω μεταβαλόντες οὐσίαν τὴν τῆς ψυχῆς, τὰς δὲ τῶν ἀφρόνων καὶ ἀλόγων ζῶων ψυχὰς συναπόλλυσθαι τοῖς σώμασι. *Commenta Bernensia in Lucanum* p. 289.5–7 Usener (SVF 2.817) *alii solidas quidem, postquam exierint de cor-*

pore, permanere, sed deinde tractu temporis dissipari: haec opinio Stoicorum (cf. above, General texts). p. 290.18–21 Usener *dogma ... Stoicorum* (SVF 2.817). *qui virorum fortium animas existimant in modum siderum vagari in aëre et esse sic immortales, ut non moriantur sed resolvantur* (cf. above, General texts). **Epiphanius Haer.** 3 p. 508.21–24 (SVF 1.146) ἔλεγε (sc. Zenon Citiensis) δὲ καὶ μετὰ χωρισμὸν τοῦ σώματος *** καὶ ἐκάλει τὴν ψυχὴν πολυχρόνιον πνεῦμα, οὐ μὴν δὲ ἄφθαρτον δι' ὅλου ἔλεγεν αὐτὴν εἶναι· ἐκδαπανᾶται γὰρ ὑπὸ τοῦ πολλοῦ χρόνου εἰς τὸ ἀφανές, ὥς φησι.

§4 Epicurus Democritus Aristotle: Cicero Tusc. 1.18 *una animum et corpus occidere*. **Iamblichus de An.** fr. 36 Finamore–Dillon at Stob. 1.49.43, p. 384.12–18 εἰ δὲ παρέσπαρται μὲν καὶ ἔνεστιν ἡ ψυχὴ τῷ σώματι καταπερεῖ ἐν ἀσκή πνεῦμα, περιεχομένη ἢ συμμιγνυμένη πρὸς αὐτὸ καὶ ἐγκινουμένη ὥσπερ τὰ ἐν τῷ ἀέρι ξύσματα διὰ τῶν θυρίδων φαινόμενα (cf. Arist. *de An.* 1.2 404a34 ~ Leucippus 67A28 DK) δηλὸν που τοῦτο ὅτι ἔξισιν μὲν ἀπὸ τοῦ σώματος, ἐν δὲ τῷ ἐκβαίνειν διαφορεῖται καὶ διασκεδάννυται, ὥσπερ Δημόκριτος (—) καὶ Ἐπίκουρος (fr. 337 Usener) ἀποφαίνονται. **Hippolytus Ref.** 1.22.5 (Epicurus fr. 340 Usener) τὰς δὲ ψυχὰς τῶν ἀνθρώπων λύεσθαι ἅμα τοῖς σώμασιν, ὥσπερ καὶ συγγενᾶσθαι αὐτοῖς τίθεται· αἶμα [sic] γὰρ αὐτάς εἶναι, οὐ ἐξεληθόντος ἢ τραπέντος ἀπόλλυσθαι ὅλον τὸν ἀνθρώπον. **Ref.** 1.20.6 (on Aristotle) τὴν δὲ ψυχὴν τὴν μὲν ὅλου τοῦ κόσμου ἀθάνατον εἶναι, καὶ αὐτὸν τὸν κόσμον αἰδίδον, τὴν δὲ καθ' ἕκαστον, ὡς προεῖπομεν, ἀφανίζεσθαι. **Lactantius Inst.** 7.13.7–8 Heck–Wlosok *falsa est ergo Democriti* (—) *et Epicuri* (fr. 336 Usener) *et Dicaearchi* (fr. 10b Wehrli, 29 Mirhady) *de animae dissolutione sententia*. ... Commentary

A *Witnesses*

(1) This material, inserted by Diels as §§11–12 at the end of ch. 4.5, is absent from P and his tradition. Both lemmata are found in S, and a shorter version of the first lemma is cited in T, which was missed by Diels but not by Raeder (cf. M–R 1.274). It is rejected by Frede (1999b) 145, who believes that this lemma does not derive from A but from a much later source, like its immediate environment in T. Frede is followed by Gourinat (2018) at M–R 4.30–32. Mansfeld (2018a) at M–R 4.183 with n. 29 argues against this view. Scholten's footnote (2015) 369–370 n. 45 is unclear.

Diels, though expressing doubt in the apparatus, as we just saw decided to append S's lemmata at the end of P's ch. 4.5, the chapter on the regent part that is absent from S (and from E). Gourinat (2011) 146 n. 21 protests strongly: this combination 'constitue sans doute le pire exemple des faiblesses de sa [sc. Diels'] méthode de reconstruction'. In his view Diels failed to acknowledge that S replaced P's Hellenistic material with Neoplatonist evidence he believed to be equivalent, and which he preferred. 'Diels fausse ainsi notre vision des pratiques de composition de Stobée, de ses orientations philosophiques et de celles de sa source'. But like Frede, Gourinat has refused the parallel for §1 in T.

(2) The presence of §1 in T, paralleled in S but absent in P, is important, for it provides further incontrovertible proof that T used not P but A as a source. See Mansfeld (2016d) at M–R 4.180–187 on the T,S source, and esp. 4.183–184 with n. 29 for ch. 4.7.1 = Diels 4.5.11; further above, General Introduction, section 2.5. This consolidates the argument in favour of the derivation of the diaphonically opposed §2 (now in S alone) from A. The terse style of both these lemmata with their series of name-labels is entirely in tune with that of the *Placita*. The evidence of Symeon Seth is interesting because as it seems it is independent of S, but also of P. The evidence of the *testes secundi* is not very helpful.

B Proximate Tradition and Sources

(1) *Proximate tradition.* The issue is mentioned in the doxographical overview of Philo *Somn.* 1.30, ὁ ἡγεμὼν νοῦς [...] ἢ ἔξωθεν εἰσκρίνεται; cf. *Opif.* 67, cited section E(a) General texts, on which see Runia (2001) 219–220, and *Cher.* 114, cited at Book 4 titulus et index above; also above, ch. 2.11, Commentary B and ch. 4.2, Commentary A. It is also found in Sextus Empiricus *P.* 2.26. The parallels in Tertullian are located in a separate chapter, where he argues against the notion that intellect should be radically distinguished from soul.

(2) *Sources.* Theophrastus' *Physics* as cited by Diogenes Laertius attributes to Parmenides the view that soul and intellect—*psyche* and *nous*—are the same (*Phys. Op.* fr. 6a Diels, 227D FHS&G at Diogenes Laertius *V.P.* 9.22), which is not paralleled verbatim in the Parmenides paragraphs of the *De sensibus*. What we have at *Sens.* 4, quoted Diels *DG* 222 as 'Theophrasti vestigia' (cf. *ibid.* 142) in relation to our ch. 4.7a.2 (= A 4.5.12 Diels), is slightly different: τὸ γὰρ αἰσθάνεσθαι καὶ τὸ φρονεῖν ὡς τὰ αὐτὸ λέγει—a comment on Parmenides 28B16 DK. Aristotle *de An.* 3.3 427a19–27 attributes this view to 'all the ancients'; cf. *Met.* Γ.5 1009b11–31, where among other evidence he also cites the Parmenides fragment. That *psyche* and *nous* are the same Aristotle attributes to Democritus (*de An.* 1.2 404a26–32) and (reluctantly) to Anaxagoras (*de An.* 1.2 404b1–3). Diogenes Laertius *V.P.* 9.44 attributes this identification to Democritus too. So Aristotle uses both formulations, while Theophrastus in the *De sensibus* only uses one.

The phrase 'as Theophrastus records in the *Physics*, citing the tenets of about all' (καθὰ μέμνηται καὶ Θεόφραστος ἐν τοῖς Φυσικοῖς, πάντων σχεδὸν ἐκτιθέμενος τὰ δόγματα), in this passage of Diogenes Laertius *V.P.* 9.22, has been interpreted by Diels (*DG* 103, 166), followed by many and now also by Zhmud (2013a) 164, as proving that Theophrastus in the *Physikṓn Doxai* (as Usener and Diels influentially called the work, followed by Zhmud though *Physikai Doxai* makes better sense) systematically discussed the tenets of the natural philosophers on the entire range of subjects later treated by Aëtius. But apart from the question of how reliable Diogenes' reference is, the phrase itself need not imply more than that Theophrastus in the passage referred to discussed the views *on the identity of soul and intellect*, or of sense perception and thought, of virtually all concerned. According to Themistius *in de An.* 108.11 (Thphr. fr. i Barbotin; frs. 137 no. 1a, 307A FHS&G), Book 2 of Theophrastus' *De anima* is Book 5 of his *Physics* (ἐν τῷ πέμπτῳ τῶν Φυσικῶν, δευτέρῳ δὲ τῶν Περὶ ψυχῆς). The simplest solution is that Theophrastus discussed these earlier views in his *De anima*, just as Aristotle had done in Book 1 of his *De anima*. This does not entail that the *De sensibus* is part of the *De anima*, for Aristotle too wrote a *De sensu* next to a *De anima*. This would make sense of Diogenes' reference.

If Diogenes Laertius *V.P.* 9.22 on Parmenides is attributed to Theophrastus, *V.P.* 9.44 on Democritus should be attributed to Theophrastus as well. Diels did not do this, possibly because the phrase about the identity of soul and mind is attested not for Theophrastus but for Aristotle. But the theoretical backdrop of the identity of perceiving and thinking is attested for both Peripatetics, and this could be paraphrased as the sameness of soul and mind.

C Chapter Heading

The heading, of the umbrella type (περὶ τοῦ δεῖναι) that dominates in the *Placita* (see above, ch. 1.3 Commentary C), is that of S ch. 1.48, not in the mss. but from the index of Photius, and may have been abridged in the usual way by S. According to §1 it pertains to the subsidiary question *unde*, according to §2 it comprises an equivalence of *nous* with *psyche*. The wording in A is not certain; it could have been e.g. Πόθεν ἐστὶν ὁ νοῦς.

D Analysis

a Context

In S's chapter the two lemmata are sandwiched between a fragment of ps.Archytas and an abstract from Iamblichus' treatise *On Soul* (which begins with πάλιν τοῖνυν περὶ τοῦ νοῦ) in *Ecl.* 1.48 with the heading 'On Intellect', on which see Festugière (1953) 11. In S this separate chapter comes *before* ch. 49 with heading 'On Soul', in which abstracts from Aëtian chapters 4.2–6 are preserved. Soul follows *nous* in the Neoplatonist hierarchy: S's order of treatment is often according to his own (Neoplatonist) priorities, think of his positioning of the theology of ch. 1.7 in ch. 1 of his Book 1 before the principles of ch. 1.3 in his own ch. 1.10. A separate Aëtian chapter on the possible provenance of intellect from outside and the question of whether it is identical with soul is quite well placed after the block of chapters on the soul and before the chapters on sense perception. Diels' decision (as he was aware himself, for he wrote in the apparatus ad *DG* 392b 'dubium an hoc capitulum ad c. 5 referendum') to append the lemmata in the right-hand column of ch. 4.5 on the location of the regent part as 4.5.11–12 is arbitrary. T's (shorter) lemma is interpolated four paragraphs down from his account of soul at *CAG* 5.28 in an account of views on the relation of intellect to soul and the status of intellect. The reason will have been that in the source used by him, i.e. A, the evidence on *nous* was distinguished from and followed after that on the soul *per se*. Accordingly, we have preferred to give this chapter the number 4.7a, instead of 4.5a.

Diels remarkably enough failed to print the lemma from T 5.28 at *DG* 392. In T it is part of a series of views on the relation of intellect to soul and the status of intellect. This follows upon contrasting views concerned with what the Stoics

believed about the mortality or relative immortality of the soul, *CAG* 5.26–27, and as we noted is located at some distance from T's Aëtian material on the soul *per se*, which at *CAG* 5.24 ends with three lemmata Diels printed at the bottom of *DG* 393 as the final part of the Aëtian chapter 4.7 'On the indestructibility of soul', although they are not about this theme at all, but on the issue of whether and in what sense a soul may be attributed to plants, and whether they may be called 'living beings' (ζῶα). See below, section D(b), above, ch. 4.7, Commentary D(c), and Mansfeld (1990a) 3187–3190.

b Number–Order of Lemmata

T has one lemma, S two. As already noted, Diels placed them at the end of ch. 4.5, that is, after the account of the location of the regent part. His motive, presumably, is that 'intellect' may indeed be equivalent with 'regent part'. The fact, however, that (1) the main source is a chapter (with its own specific title) in S *different* from that in which the (other) lemmata of ch. 4.5 are preserved, that (2) the lemma in T is found at some distance from the material for ch. 4.5, and (3) that in Tertullian and Nemesius, too, the issues of the relation between soul and intellect and of intellect's origin are discussed in chapters that are not found near their accounts of the regent part, further justifies our decision not to accept Diels' reconstruction of ch. 4.5 *ad finem*, and to allocate the two lemmata to a chapter of their own instead. This entails that P eliminated an entire chapter. See also M–R 2.1.142–143, 2.2.470, and for the splitting up of Dielsian chapters M–R 2.2, chs. 2a, 5a, 17a.

A reversal of the lemmata order in this (new) chapter is defensible, but we have preferred not to interfere with S's order. Perhaps our two lemmata are the remains of an *uberius caput*. Even so the multiple name-labels give pretty good coverage. S may very well have left out one or two lemmata because he preferred the fragment from Iamblichus' *On the Soul* (cited below at section E(b) General texts), which he copies out immediately after the two Aëtian lemmata.

c Rationale–Structure of Chapter

§1 is concerned with the subsidiary question type *unde*, πόθεν (cf. e.g. the headings of chs. 2.5 and 2.17 and see Mansfeld (1990a) 3092 n. 138, 3125–3126, 3133, 3138–3139, 3150, 3194), and posits a separate status for intellect. It seems a bit odd that Aristotle himself is not included, in contrast to other name-labels whose connection with such a status for intellect is, at best, a matter of interpretation. Perhaps the name-label has dropped out.

§2 is about the question type and category of substance. The assumption is that there is no distinction between intellect and soul. In the *De anima* the latter position is attributed by Aristotle to Anaxagoras and Democritus, see sec-

tion B above and section E(b)§2 below. The two lemmata suffice to set out a complete diaphonia, just as e.g. in ch. 4.6: §1 is about a separate status for intellect, while §2 denies that intellect and soul may be distinguished from each other, so that there can be no separate status for intellect. This further supports the separate status of the little blemmatic chapter.

d Further Comments

General Points

The evidence has been streamlined. The diaphonia between §1 and §2 is to some extent false or at any rate incomplete, since soul too, according to a part of the evidence not reflected in our chapter, was believed by some to enter from outside. But the somewhat strange contrast between intellect entering from outside on the one hand and the lack of difference between soul and intellect on the other is precisely paralleled in the fragment from Iamblichus' *De anima* quoted below section E(a) General texts. Finamore and Dillon (2002) 118–119, commenting on the Iamblichus passage, find this difficult to explain, but should have taken the Aëtian lemmata into account, copied out by S immediately before the Iamblichus passage.

The diaphonia was used by the Pyrrhonists, see Sextus Empiricus *P.* 2.26, and note the parallel clause οὐδέν ἐστι ζῶον ἄλογον, ἀλλὰ καὶ νοῦ καὶ ἐπιστήμης δεκτικὰ ἐστὶ πάντα κτλ.

Note that Themistius (*in de An.* 108.12–13), after a substantial verbatim quotation of Theophrastus on the potential and actual intellect, actually says that in what follows in Book 5 of *Physics*, or Book 2 of *De anima*, 'concerning the potential intellect as well they (namely Aristotle and Theophrastus) find almost the same difficulties, whether it is from the outside or connate' etc. (περὶ τοῦ δυνάμει νοῦ σχεδὸν τὰ αὐτὰ διαποροῦσιν, εἴτε ἑξωθεν ἐστὶν εἴτε συμφυῆς), as cited at greater length ad fr. i Barbotin and FHS&G fr. 307A.

Individual Points

§1 Because it is the purpose of the chapter to achieve a diaphonia, one should not be surprised by, or shocked (as Von Arnim apparently was) at the array of name-labels: the status of intellect as a separate component is in need of supporters. Similar views are attributed by Aristotle to the Pythagoreans (*de An.* 1.2 404a16–18) and 'the Orphic poem' (*de An.* 1.5 410b27–30, the soul arriving with the winds). Also cf. Varro at Lactantius *Op.D.* 17.5, on the 'soul inhaled by the mouth'. Attribution to Plato may have been achieved by combining the doctrine of *metempsychosis* with the idea that of the three parts of the soul only the highest part is immortal. See also Alcinous *Did.* 25, p. 178.34 H., and cf. Tertullian *de An.* 3.2, *hi statum eius aliunde (de)ducunt*. The attribution to Anaxagoras may

be connected with the special status of *Nous* (and *nous*) in his system. That to Cleanthes may be an echo of the Stoic view that the embryo becomes ensouled at its first breath (*SVF* 2.804–808).

§2 The second clause of the doxa gives the grounds for the first. Because there is no living being (animal) that does not possess some reason—the tacit other premise being that all animals are ensouled—there is no ground for distinguishing between humans and other animals as if only humans had reason, so no grounds for distinguishing between reason and non-reason, or between intellect and soul. See also Mansfeld (1990a) 3192. The combination of the name-labels Parmenides and Empedocles and Democritus plus doxa echoes Aristotle *Met.* Γ.5 1009b12–31 (quoted section E(b)§2), where the present identification of soul and mind (explicitly paralleled for Democritus and Anaxagoras elsewhere in Aristotle, see again section E(b)§2) is expressed as a lack of distinction between sense perception and thought. See further Mansfeld (1996) and (2018b). See also M–R 2.1.142–143.

e Further Evidence

One is struck by the absence of the name-label Democritus in the first doxa, since Aristotle tells us that soul-atoms (and soul does not differ from intellect for Democritus, Aristotle says, see next lemma with section E(b)§2) ‘enter from outside’, θύραθεν ἐπεισιόντων, in the act of breathing, *de An.* 1.2 404a13. In this context he even attributes a θύραθεν νοῦς to him, *Resp.* 4 472a22. The presence of this name-label would presumably have weakened the diaphonia (Democritus’ presence is at any rate restricted to the next lemma because of the identification of soul and intellect Aristotle attributed to him).

Ch. 4.3 section E(b)§14, with Commentary D(d)§14, presents some evidence of antecedents in Aristotle for the attribution of a sort of exterior soul or *nous* to certain Presocratics. So the Aëtian lemma 4.7a.1 seems to derive from Aristotle no less than from Theophrastus. See also above, section D(d)§1, and M–R 2.1.143.

As is well known, Aristotle’s text *GA* 2.3 736b27–28, λείπεται δὲ τὸν νοῦν μόνον θύραθεν ἐπεισιέναι καὶ θεῖον εἶναι μόνον, probably in combination with *de An.* 3.5 430a17–22 (cf. Moraux 1973, 231), in both Middle Platonist and Aristotelian circles gave rise to the attribution to Aristotle himself of the view that the intellect enters from outside. It is attributed to Cratippus by Cicero, see section E(b)§1, who even ventures to amplify this attribution into one of a World Soul. For an argument contra of this external origin in relation to Aristotle see Berti (2008) 295–328; also cf. Moraux (1984) 2.406–425.

The bald statement of §1 fails to tell us whether or not the intellect entering from outside exists separately or derives from a divine Intellect. Our chapter in

no way anticipates the history of the views concerned with this intellect from, say, Alexander of Aphrodisias onwards. For Alexander see e.g. Moraux (2001) 343–353, 373–382, 386–394, and for this subsequent development the still useful overview of Kurfess (1911). The fragment of Iamblichus *De anima* quoted below, section E(a) General texts, may give some impression of the later debate.

§13 A 4.9.2 οἱ ἀπὸ τῆς Ἀκαδημίας ὑγιεῖς μὲν (sc. τὰς αἰσθήσεις), ὅτι δι' αὐτῶν οἶόν (τε) λαβεῖν ἀληθινὰς φαντασίας, οὐ μὴν ἀκριβεῖς.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

(1) The witnesses are P and S. P has four lemmata, three of which are paralleled in G. For Book 4, beginning with the present chapter, complete chapters of S have only been preserved in L, the Florentine florilegium. Diels includes this evidence in the right-hand columns of the *DG*. In the manuscripts of the main tradition only lemmata with the name-labels Plato and Aristotle are extant, and sometimes not even those. Thus for the present chapter S has no less than thirteen lemmata, all except §3 (Plato) and (in ms. P only) §6 (Aristotle) extant only in S^L. T, as we have seen, stopped excerpting A after ch. 4.7a, the last

chapter to be paralleled in the *CAG*. Diels included the first lemma transmitted in S^L (the same as P's first) in his edition in *DG*. But in his article in response to Elter's dissertation, (1880) 349, he argued that it had been interpolated by John of Damascus from P^B . Wachsmuth followed Diels in his edition of *S*, noting in his apparatus on p. 472: 'prima tantum illius ecl. ... non Stobaei est sed ex [ps.]Plutarcho a gnomologio Laurentiano adscitum, ut nunc ipse Dielesius probavit'. Daiber (1980) 481 fails to mention that interpolation has been suggested and has not seen that Wachsmuth does not include this text. It was not yet excluded by Meineke as noted in the list of witnesses above the text. At *M-R* 1.267–268 and 1.295 we argued against Diels and continue to accept the lemma as genuinely present in *S*.

(2) The situation in *S* (*S* as restored in Wachsmuth's edition by the inclusion of the evidence of S^L) is complicated. In *Ecl.* 1.50 *S* has combined blocks of lemmata from at least chs. 4.8, 4.9, and 4.10 (also ch. 5.28, see below, ch. 4.9 Commentary A(2) and A(4) and ch. 5.28 Commentary A and D(c)). The blocks of ch. 4.8 have been distributed over three different places, viz. ch. 4.8.2–3 at *Ecl.* 1.50.1.2–2a, p. 472.6–15, ch. 4.8.4–7 at *Ecl.* 1.50.3–6, p. 473.1–19, and ch. 4.8.8–14 at *Ecl.* 1.50.10–16, p. 474.6–23 Wachsmuth. In between blocks one and two we find at *Ecl.* 1.50.2b, p. 472.16–21 a verbatim excerpt from Plato's *Philebus* in the usual Stobaeian way illustrating ch. 4.8.3, the Plato lemma. More interestingly, in between blocks two and three *S* inserted three lemmata from ch. 4.10, viz. 4.10.3 + 4.10.5–6 at *Ecl.* 1.50.7–9, pp. 473.20–474.5 (4.10.1–2 + 4.10.4 are found in the next Stobaeian chapter, *Ecl.* 1.51.2–4, pp. 481.17–482.8); see Commentary A at ch. 4.10 below. Thus these excerpts from ch. 4.10 interrupt the lemmata sequence of ch. 4.8. They are then followed by the remaining seven belonging to ch. 4.8, before S^L moves on to the contents of ch. 4.9. Wachsmuth simply copied out the sequence of lemmata belonging to ch. 4.8 (minus §1) in *L*. It is surely most likely that *L* just copied out the sequence in *S*, so his decision is unobjectionable. *S*'s chapter ends after the last excerpt from *A* with six excerpts from Plato, namely one from the *Phaedo*, four from the *Theaetetus* in succession, and one from the *Timaeus*, which in various ways deal with the reliability of the senses (the theme of the next chapter, 4.9).

(3) Eleven of *S*'s fourteen lemmata are not paralleled in *P* (but conversely none of *P*'s four lemmata are missing in *S*). *G*'s three lemmata too are paralleled in both *P* and *S*. Important parallels for §1 and §3 are found in *Nem*. We accept Diels' view that *Ecl.* 1.50.7–9, both (as we have seen) preceded and followed by lemmata from ch. 4.8, belong in another chapter, viz. ch. 4.10. *S* must have moved them here rather than just S^L . Wachsmuth in the apparatus *ad c.* 50.7 disagrees: 'sed quamquam forma ad sensuum numerum, de quo illo capite agitur, spectare videtur, ex a r g u m e n t o potius ad hoc referendum est'.

But *Ecl.* 1.50.7–9 are in the first place (and 50.7 and 50.9 exclusively) concerned with the number of the senses, not with sensation, and 1.50.8 (= ch. 4.10.5) is about the αἰσθήσεις as organs, not as sensations, and about their number (more than five), though also mentioning the sense objects.

(4) The order of S's fourteen lemmata and of the surviving four lemmata of P is the same. It appears that S copied out the whole chapter without disturbing the lemmata order, as becomes clear when we subtract the interpolated Plato quotation at S 50.2b and the interpolated lemmata from ch. 4.10 at S 50.7.

B Proximate Tradition and Sources

(1) *Proximate tradition.* AD provides parallels for the Aristotle lemma. Fr. 15 Diels (cited below, section E(a)§6) describes the αἰσθητικόν, shared by all living beings, as fivefold, i.e. consisting of the five senses, and adds the compound sense, comprising the functions of imagination, memory, and opining which is not devoid of intellect. We have sensation when a sense is affected in some way.

(2) *Sources.* Aristotle and Theophrastus: In *de An.* 1.2 Aristotle points out that the predecessors (Presocratics, Plato, even Xenocrates) made the soul the principle of movement (cf. A ch. 4.6, but also 4.2.1–5 and 4.3.11, see above, ch. 4.2, Commentary D(a)), or of sensation and knowledge, or of movement as well as of sensation and knowledge. Sensation and its objects are the theme of Theophrastus *De sensu et sensibilibus*, but the approach and contents there differ from what we find in A. Aristotle in his *De sensu* discussed the senses (singling out the theories of vision of Empedocles and Democritus) and the objects of sight, taste (mentioning Empedocles) and smell (mentioning Democritus). As to thematic issues the chapter also echoes themes from Aristotle *De anima* Books 2 and 3, e.g. *de An.* 3.4 about knowledge (*nous*).

Note that Aristotle at *de An.* 2.5 first discusses sensation in general, then, at 2.6, begins his account with the objects of sense: 2.6 418a7–8, λεκτέον δὲ καθ' ἑκάστην αἴσθησιν περὶ τῶν αἰσθητῶν πρώτων, 'in discussing the particular senses we must speak first of the objects of sense', and in the chapters that follow discusses the senses one after the other together with their objects, starting with sight and the visible. Theophrastus in the *De sensu* systematically discusses a number of Presocratics as well as Plato for two to five senses, and then Democritus and Plato for the sense objects. In our present chapter the main roles are reserved for the Hellenistic philosophers. Of the Presocratics now only Democritus and Leucippus are left (we do not know who or what 'the followers or successors of the ancients' are supposed to be; for suggestions see below), while Plato, too, is included; this is perhaps an echo of the restrictions of the second part of Theophrastus' treatise. The summaries based on the works of Plato and

Aristotle are quite competently done. About the sources for the Hellenistic theories nothing much can be said, though such parallels as are available inspire some confidence.

At *DG* 215 Diels includes ch. 4.8.6 among his sparse examples of a close reading—according to him by A—of the text of Aristotle's *pragmateiai* ('[i]psius Aristotelis doctrina ... ex accurata eius lectione hausta'; cf. chs. 1.9.1, 1.23.2, 1.29.2, 4.9.3, and 5.3.1, each at Commentary B). The definition at the beginning of §6, Ἀριστοτέλης τὴν αἴσθησιν ἑτεροίωσιν αἰσθητ(ικ)οῦ καὶ μεσότητα (αἰσθητοῦ), is close to *de An.* 2.11 424a4–5 ὡς τῆς αἰσθήσεως οἶον μεσότητός τινος οὔσης τῆς ἐν τοῖς αἰσθητοῖς ἐναντιώσεως ('which means that the sense is a sort of mean between the relevant sensible extremes', tr. Hett LCL), but *ad sententiam* rather than *ad verbum*. So it is less close than Diels claimed.

C Chapter Heading

Another example of the umbrella type (περὶ τοῦ δεῖνα) that dominates in the *Placita* (cf. ch. 1.1, Commentary C). In S it is not included in the text of the mss., but is only found in the indices of L and Photius, both of which add the first part of the heading of the next chapter, Εἰ ἀληθεῖς αἱ αἰσθήσεις ('Whether the sensations are true'), to the Περὶ αἰσθήσεως καὶ αἰσθητῶν of the present chapter, connecting them with καὶ. The Aristotelian title Περὶ αἰσθήσεως καὶ αἰσθητῶν ('On sensation and sense-objects'), nr. 44 on the list of titles in the Aristotelian catalogue of Ptolemy (Hein 1985. 527), which is the same as the heading of our chapter, is cited by Aristotle himself, e.g. *PA* 2.7 653a19–20, *GA* 5.2 781a21, and by Galen and Alexander of Aphrodisias (texts below section E(b) Chapter heading).

αἴσθησις may mean both 'sense' qua 'organ' or 'sensor', 'seat of sensation', and qua 'sense of', i.e., 'sensation', 'perception', or more generally 'awareness'. On the basis of the various traditions of P alone a decision between Περὶ αἰσθήσεως and Περὶ αἰσθήσεων as first part of the heading for A is not easy. Diels follows G, who has Περὶ αἰσθήσεως καὶ αἰσθητοῦ (the difference between αἰσθητοῦ and αἰσθητῶν is insignificant), and S, who as we saw combines the titles of chs. 4.8 and 4.9, and who has περὶ αἰσθήσεως. Mau and Lachenaud approve of Diels' heading, and we follow suit, as sensation in general is the main theme in ch. 4.8.

As an embedded phrase ('eorum fit mentio quae proxime vel antecedunt vel sequuntur' writes Bonitz 95b33) a formula such as περὶ αἰσθήσεων or –ως is the predecessor or equivalent of the heading, or title, see M–R 2.1.48, 159–161, 162–163, 170, 202–204. One should compare the title of Theophrastus' treatise (inap-positely translated as 'On sensations' at FGS&G fr. 265.4). The treatise begins with the phrase περὶ δ' αἰσθήσεως [note the singular—with περὶ it is repeated throughout the treatise] αἱ μὲν πολλαὶ καὶ καθόλου δόξαι δὲ εἰσιν ('the many doxai

on sensation' etc.). White (2002) 20–22 argues that with one exception the titles of Theophrastus' opuscula correspond to the first noun of the opusculum concerned: the correct form of the title should be *Περὶ αἰσθήσεως*. But at Diogenes Laertius *V.P.* 5.42 and in some mss. Theophrastus' title is given as *Περὶ αἰσθήσεων*, just as the title of Aristotle's treatise begins with *Περὶ αἰσθήσεων* in some mss. of the *Parva Naturalia*. The second part of Theophrastus' treatise begins with the formula (c. 59) *περὶ δὲ τῶν αἰσθητῶν* ('and on the sense-objects'), thus echoing the second half of Aristotle's title. In view of the fluctuating nature of titles in antiquity it is hard, perhaps even impossible to decide what is the correct form for Theophrastus. Also note another reference of Aristotle to 'On the senses' at *Mete.* 3.4 372b9–10, *ἔστω δὲ περὶ τούτων ἡμῖν τεθεωρημένον ἐν τοῖς Περὶ τὰς αἰσθήσεις δεικνυμένοις*. Galen *De instrumento odoratus* 5.3 (cited below, section E(b) Chapter heading) too adverts to variant titles.

D Analysis

a Context

Following upon the eight chapters dealing with the soul *per se*, this is the first of five dealing with cognitive issues in a more general way; thereafter, in chs. 4.13–19 (or 20), the individual senses are treated. By and large, true to A's stated purpose of presenting the *physikos logos* (ch. 1.1.1), the emphasis falls on the physical and mechanistic aspects of cognition, though with exceptions, namely ch. 4.9 about truth and falsity and ch. 4.12 about the distinction between trustworthy and untrustworthy presentations. But these topics too may be included in the treatment of cognition in physics, see above, Introduction to Book 4 section 6.

The issues treated in this series of chapters are roughly the same as those in Aristotle *de An.* 1.2 (overview of the predecessors' views on the soul as the principle of sensation and cognition), 2.5–10 (sensation), and 3.4–8 (cognition), and in Lucretius *DRN* Books 3–4, cf. M–R 2.1.145–146. The echoes of Theophrastus' *De sensibus* listed by Diels *DG* 222–225 are not sufficient to support his thesis of a large-scale influence of this treatise (as part of what he called the *Physikôn Doxai*) on the *Placita*. See below, ch. 4.10 Commentary D(e), and Ax (1986) 77–86 on A chs. 4.16 + 4.19–20, and Baltussen (1993) 203–205 and (2000b). We note that an account of touch is lacking in both A and Lucretius (only a brief mention together with sight at *DRN* 4.233); this shared lacuna may indeed point to common ancestry, see M–R 2.1.151. The absence of touch is more surprising in what purports to be a standard overview like the present one, for though not counting as a separate sense in the *Timaeus* it is of primary importance in Aristotle's account of sense perception and generally present in literature on the senses.

The first issue in the present group is the nature of sensation(s) and sense objects in general (category/question-type of substance), and where (category of place) and how (question-type of cause) they occur or are found, the next that of their truthfulness (category/question-type of quality). A chapter dealing with the number of the senses (category of quantity) follows. We note once again the importance of a treatment according to categories and question types. The section is concluded by two often-discussed and important chapters, 4.11–12, dealing respectively with the Stoic analysis of the cognitive process from sensation to concept-formation, and with Chrysippus' distinctions between various forms of real and imagined impressions.

b Number–Order of Lemmata

P has four lemmata of which G omits one, S has twelve (for the first one see above, section A). The sequence in P still corresponds with that of S even when Diels' excision of *Ecl.* 1.50.7–9 from this chapter is not accepted, as it is by us. That G's order corresponds with that of P is not surprising, as it does so most of the time. The first lemma of A's chapter, §1 on the Stoics, comes first because it explicitly provides a proper definition (οἱ Στωικοὶ ὀρίζονται οὕτως τὴν αἴσθησιν). Compare the same formula in the same relative position at ch. 1.6.1, ὀρίζονται δὲ τὴν τοῦ θεοῦ οὐσίαν οἱ Στωικοὶ οὕτως, the formula Πλάτων τὴν φωνὴν ὀρίζεται at ch. 4.19.1, to be distinguished from the nominal definitions at the beginning of chs. 1.9, 1.10, 1.11, 1.12, 1.14, and 1.15. Also ch. 2.1 begins with a proper definition, of 'cosmos', in this case a discovery attributed to Pythagoras. The lemmata at ch. 4.8.2–3 have the same relative position in both P and S, while G omits §2, so in G the Plato lemma follows immediately upon the Stoics lemma. §§4–9 are not paralleled in either P or G, but there is no reason to interfere with S's order. If, reasonably, we assume that §§4–9 were simply abridged away by P, the position of P4 (Leucippus Democritus) after these omitted lemmata perfectly corresponds with the relative position of the same lemma in S (where there is one name-label more: Epicurus). Finally, there is no reason to interfere with S's positioning of §§12–14 at the end. Quite the contrary; this is where they belong, because to some extent they anticipate the details of the theories of cognition set out in the next chapters. Unless, of course, one wishes to place them in a brief chapter of their own—but unlike for ch. 4.7a there is no evidence for the heading of such a chapter.

c Rationale–Structure of Chapter

Though it comprises several themes, the overall unity of this rich chapter is certain because of the precedent not only of Aristotle's account in *De anima* Books 2 and 3, but also of his monobiblos with the same title, *Περὶ αἰσθήσεως*

καὶ αἰσθητῶν, and of Theophrastus' monobiblos *Περὶ αἰσθήσεων*, the second part of which deals with the objects of sense (though these are not mentioned in its title). Alexander of Aphrodisias in the introduction to his Commentary on Aristotle's *De sensu* mentions as one of the topics of the *De anima* περὶ τῶν αἰσθητῶν, τί τὸ ἐκάστη αἰσθήσει αἰσθητὸν καὶ τίνι ὄντι αὐτῷ κατὰ τὴν οἰκείαν φύσιν τὸ αἰσθητὸ εἶναι ὑπάρχει (*in Sens.* 1.14–17). These several themes, moreover, are connected by terminology and association: the Stoic and other definitions of sensation and sense object(s) include those of the sense organ(s) already largely treated by Aristotle (μὴ οἶόν τε ἦν ἄνευ αἰσθητηρίου αἰσθάνεσθαι τίνος, *in Sens.* 1.12–13), and involve various explanations of the sensory process, even diaphonically opposed ones. Related issues treated are questions such as to what extent soul, or body, or both are concerned; whether sensations are of bodies or incorporeals; and the extent to which according to various schools sensation amounts to cognition.

The fourteen lemmata naturally fall into four blocks, the first of which, §§1–6, has an appendix (§7). We note that three lemmata explicitly mention the number of meanings of the term αἰσθησις (see below, section D(d) General points), namely §1, Stoics: many meanings (in fact three); §2, Epicurus: two meanings; §4, Peripatetics: four meanings. §3, Plato, seems to be about a single meaning. The sequence according to the category of quantity, i.e., many (viz., 3)–2–1(?)–4 begins as a descending order (if, that is, we may take §3 as representing the number 1), but then turns into an ascending one in the last lemma. The converse of such a rather irregular order can be paralleled, cf. ch. 4.3.1–13: 1, 1, 1, 1, 1, 1, 1, 1, 1, 4, 4, 2: first ascending then descending, and ch. 4.4.1–7: 2 or 3, 5, 8, 9, 5, 2: first ascending then descending, too.

§§5–6 are linked by the concept of 'alteration' (ἐτεροίωσις), though in the case of the Atomists this is an alteration of the body, and in that of Aristotle one of the sensing part/function of the soul. This opposition recalls the diaphonic contrast, stretching over two chapters, between Aristotle's concept of soul as incorporeal at ch. 4.2.6 and Democritus' and Leucippus' concept of the soul as corporeal at ch. 4.3.5 and 4.3.7.

§§6–7 are linked by the authentically Aristotelian concept of *sensus communis*, for §7 is a sort of appendix to §6 citing the quite different Stoic application of this concept.

§§8–9 belong together as the two sides of a diaphonia: §8 says sensation is of bodies, the puzzling §9 that it is of incorporeals.

§§10–11 also belong together as the two sides of a diaphonia: §10 says sensation comes about through images, §11 that it comes about through emanations. This opposition between incoming images and emanations is one of the main themes in chs. 4.13 and 4.14.

§§12–14 belong together because they list three different views, viz. those of the Stoics, the Academic Sceptics, and the Peripatetics on the all-important issue, in Hellenistic theories of knowledge, of the relation between sensation (αἴσθησις), assent (συγκατάθεσις), and, especially, cognition (κατάληψις). The first two tenets constitute an obvious diaphonia, as the Stoics (§12) are said to hold that every sensation is an assent and a cognition, and the Academics (§13) that no sensations are either cognitions or assents. The affirmation that the Stoics hold every sensation to be, or rather to imply, assent and cognition, fails to represent the true state of affairs. So their tenet has been modified, *more doxographico*, the better to express the diaphonia. The view attributed to the Peripatetics (§14) that sensations do not occur without assent but are not (themselves) assents, clearly is a compromise position. The term cognition (κατάληψις) in §§12 (Stoics)–13 (Academics) provides a backwards link with §1, where one of two denotations of sensation according to the Stoics is κατάληψις through a sense organ: a modest variety of ring composition.

d Further Comments

General Points

We note the absence of the Cyrenaics, who held that only the affections (πάθη) are perceptible.

§§1–6 give the definitions and explanations, linked to various name-labels and arranged on a gliding scale, or diaeresis—in the sense of a listing in an ordered sequence—, of the words ‘sensation’ (αἴσθησις), ‘sense object’ (αἰσθητόν), ‘impression’ (φαντασία), ‘sense-organ’ or ‘sensor’ (αἰσθητήριον, μόριον), and ‘cognition’ (κατάληψις). Note terms such as §1 λέγεται and §2 λεγέσθαι, which point at verbatim quotation. In §§1–4 the definitions concerned are of the nominal or conceptual variety, the Stoic definition at the beginning of §1 being an exception; see further above, ch. 1.9 Commentary D(d), general points.

Individual Points

Chapter heading Our decision in favour of Περὶ αἰσθήσεως in the singular is based on the fact that αἴσθησις (‘sensation’, ‘sense-perception’ in general) is not only defined in the first lemma, but is also the main subject in the others. The individual senses are dealt with in later chapters. Note moreover that the alternative heading, Περὶ αἰσθήσεων, may mean not only ‘On senses’, but also ‘On sensations’. See further section C above.

§1 The practice of commencing a chapter with a definition in which its subject is the first word followed by ἐστὶ occurs several times elsewhere in order to

introduce an introductory definition (chs. 1.9–12, 1.14–15, 1.23, 2.30, 3.1, cf. 1.25.1, 5.3). The present lemma, with the name-label as its first word, states explicitly that it is a definition: *ὀρίζονται*, and in chs. 1.6.1, 1.23.1, 4.19.1, 5.3.1 and 5.29.1 we find name-labels too.

ἀντίληψις is a weaker form of *αἴσθησις* than *κατάληψις*.

Part of the text as transmitted is corrupt. Diels despaired of healing it; see references in the apparatus criticus. The word *ᾧδοον* does not make much sense; Mau ingeniously suggested a mechanical corruption, viz. the interpretation of the first letter of *ἡγεμονικοῦ* as a number symbol. It is simpler to assume that a gloss deriving from ch. 4.4.4, where the regent part is counted as the eighth part, strayed into the text in the Byzantine tradition. The emendation of lines 5–6 printed by Mau (followed, as usual, by Lachenaud), viz. *ἀφ' οὗ {συνίσταται} πάλιν {δ'}* is difficult to accept, because the postulated corruption is hard, if not impossible to explain. It is in fact a combination of suggestions of earlier editors, some of whom bracketed *συνίσταται* or, like Diels, banished the word to the apparatus, and Von Arnim (whose apparatus is defective, as it usually is), who just omitted the *δ'*. Diels had likewise banished this connecting particle to the apparatus. Torraca in his translation (with comment p. 456 n. 128) follows Diels' wilder suggestions. It is not only better but also simpler to assume that the words *ἀφ' οὗ συνίσταται* were inadvertently left out, then added in the tympanon, from where they were put back in the wrong place, a not unusual phenomenon (Brinkmann's law, see Brinkmann 1902). In the present case, this is entirely understandable: they were inserted after *ἡγεμονικόν* in line 5 instead of after *ἡγεμονικοῦ* in line 6.

The 'sensors', or percipient currents of *pneuma*, are produced by the regent part, or 'grow out of it', as ch. 4.21.2 has it: *ἀπὸ δὲ τοῦ ἡγεμονικοῦ ἑπτὰ μέρη ἐστὶ τῆς ψυχῆς ἐκπεφυκότα καὶ ἐκτεινόμενα εἰς τὸ σῶμα ... τῶν δ' ἑπτὰ μερῶν τῆς ψυχῆς πέντε μὲν εἰσὶ τὰ αἰσθητήρια*. Perception (*αἴσθησις*) and 'grasping' or cognition (*κατάληψις*) are not only receptive but also active, as the word *κατάληψις* itself and the simile of the tentacles of the octopus (ch. 4.4.4) make clear. As parallels for our translation of *ἀφ' οὗ συνίσταται* we are able to cite Ptolemy *Geog.* 4.3.17 *καὶ τὸ καλούμενον Κίρνα ὅρος ... ἀφ' οὗ αἱ λίμναι συνίστανται συνάπτουσαι ἀλλήλαις* 'der sogenannte Kirna-(Kinna)Berg—von ihm gehen Seen aus, die mit einander verbunden sind' (tr. Stückelberger–Graßhoff). Also cf. Paulus Alexandrinus *Elementa apotelesmatica* p. 13.1–3 Boer.

§1[3–5] The well-known Aristotelian formula *πολλὰχῶς λέγεται* is also used e.g. by Philo *Fug.* 177 and Strabo 8.3.30. Just as the concepts *ἡ δύναμις καὶ ἡ ἐνέργεια* it is not part of the original Stoic phraseology. One may compare the Aristotelizing presentation at ch. 4.11.2–3, where see Commentary D(e)§§2–3 ad fin.

§2 The Epicurus lemma exploits an ambiguity of the term αἴσθησις, which can mean both the organ or seat of sensation, and the sensation itself. Thus on the one hand αἴσθησις means ‘sense’, i.e., the organ or seat of sensation: the ‘bodily part’ or region (μόριον), which is the sensory ‘faculty’, or ‘power’, and on the other the ‘activity’ of this organ, or seat: the actually accomplished sensation which is the ‘sense object’ (αἰσθητόν). Steckel’s conjecture ἐνάργημα (a term used by Epicurus) for ἐνέργημα is very tempting but unnecessary, though a parallel for the pair δύναμις: ἐνέργημα is not found in Epicurus’ remains.

In the *Placita* a doxa as a rule is in *oratio obliqua* depending on a verb of declaration. In the present lemma we have one of the rare examples of *oratio recta* (cf. chs. 2.5.1, 4.11, 4.12). This implies, or so we believe, that part of the lemma is an (abridged) verbatim quotation of Epicurus or at least derives from an actual Epicurean text. The formulas ἥτις ἐστὶν ἡ δύναμις and ὅπερ ἐστὶ τὸ ἐνέργημα are not part of the quotation but explicative glosses anticipating the final phrase of the lemma (where the specific Epicurean term ἐπαίσθημα—cf. the fragment of, perhaps, the *Canon* at Diogenes Laertius *VP*. 10.32 = Epic. fr. 36 Usener—has been replaced by the neutral αἰσθητόν).

§5, §6, & §10 The present chapter is the only one in the *Placita* to contain the word ἑτεροίωσις, and does so three times. This suggests a shared origin of these lemmata, or a shared influence.

§5 That the sensations and thoughts according to Leucippus and Democritus are alterations of the body is the only echo in our chapter of the view of Aristotle, partly but importantly shared by Theophrastus, that according to the ancients sensation and thought are the same and a matter of bodily alteration. That some philosophers fail to distinguish between sensation and thought, and others not, is one of the diaeretic criteria in the *De sensibus*. The modest echo in the present chapter of Theophrastus’ treatise signifies a diluted influence, *pace* Diels’ general hypothesis. See further the passages cited below, section E(b)§5, and Mansfeld (1996).

§6 The lines [20] κοινὴν ... [22] κινήσεως are also found below in ch. 4.10 on the question of how many senses there are, where they are combined with a first phrase, namely Ἀριστοτέλης ἔκτην μὲν οὐ λέγει, to form the lemma 4.10.2 of S as preserved in L. In ch. 4.10 this κοινὴν ... κινήσεως part of S’s lemma is paralleled in P, together with both the lemma before and the lemma after it, which occupy the same position in S as preserved in L as they do in P. This proves the authenticity of [20] κοινὴν ... [22] κινήσεως and corroborates its placement in ch. 4.10. In the present chapter we do not have P for ch. 4.8.6 but only S as preserved in L, whose text here is a little bit different from his own text for ch. 4.10.2 in *Ecl.* 1.51.3 W. and from that of P at 4.10.2. Heeren and Meineke needlessly complicated matters further, see the apparatus of Diels *DG* 395b and

399b, and Wachsmuth pp. 473 and 482. Diels used the text of ch. 4.10.2 to correct 4.8.6. (There is no reason in principle why A could not have largely repeated a lemma elsewhere if the subject-matter encouraged it. This happens in Book 2, see ch. 2.5.3 Philolaus.)

Aristotle never said that sensation changes the object of sensation, so if we do not wish to impute a gross mistake to A, S's transmitted αἰσθητοῦ ('object of sensation') has to be emended. The simplest change is into αἰσθητ(ικ)οῦ, 'organ of sensation' (the term is paralleled in AD fr. 13 Diels quoted below section E(a)§6). We may compare P 4.21.4, where φωνήν has to be changed into φωνη(τικό)ν, though Diels forgot to do so and Von Arnim at *SVF* 2.836 just quoted the text of the *DG*. Also see ch. 2.4.10, where παθητικόν, preserved in S, is corrupted into παθητόν in P; the word παθητός is not part of Aristotle's vocabulary, and a change from παθητικόν into παθητόν is easier to understand than one the other way round. The simple error in §6 occurred through a misreading of a ligature or through haplography. Once the defective reading was there, the necessary αἰσθητοῦ after μεσότητα was omitted in a next stage because it seemed superfluous (as it seemed superfluous to Diels and others).

This lemma, neglected by scholars, presents a later, though by and large correct systematisation and more precise formulation of Aristotle's doctrine. The exact attribution, for instance, of particular common sensibles to two senses and of others to all the senses cannot be paralleled exactly in the *pragmateiai*. For phrases in Alexander and Themistius that come close see section E(b)§6.

§7 For self-awareness, ἡμῶν αὐτῶν ἀντιλαμβανόμεθα, see Cicero *Fin.* 3.16–17 on Stoic *sensus sui* in the context of *oikeiosis*, partly cited at section E(b)§7; discussion of this passage at Engberg-Pedersen (1990) 66–72. Also the citation of Chrysippus at Diogenes Laertius *V.P.* 7.85 (*SVF* 3.178), and esp. the three passages from Hierocles' *Stoicheiosis Ethike* likewise quoted at section E(b)§7. Excellent discussion at Bastianini–Long (1992) 379–396, to some extent summarized at Ramelli–Konstan (2009) 39–41; see further below at ch. 4.11, Commentary D(d)§§2–3. A Cyrenaic parallel is at Cicero *Luc.* 20. For Epicureanism cf. Lucretius *DRN* 2.433–439, who distinguishes between two kinds of touch, one reacting to things impinging from outside, the other registering what happens in our body, and Sedley (1989).

§8 κριτικήν: cf. A 4.10.2 below. The term κριτήριον, perhaps surprisingly, does not occur in the *Placita*, and the verb κρινεῖν is not used either. κριτήριον is used in a cognitive sense AD fr. 16 Diels at S 58.1 (on Aristotle) κριτήρια δ' εἶναι τῆς τούτων (sc. τὰς αἰσθήσεις καὶ τὰς διανοητικὰς κινήσεις) γνώσεως τὸν τε νοῦν καὶ τὴν αἴσθησιν, τὸν μὲν τῶν νοητῶν, τὴν δὲ τῶν αἰσθητῶν.

§9 The objects of sense are unexpectedly said to be incorporeals. Possibly the lemma has been formulated to allow for a perfect but purely doxograph-

ical diaphonia with the corporealism of the Stoics of the preceding lemma, cf. above section D(c)§§8–9. The formula οἱ ἀπὸ τῶν ἀρχαίων is also puzzling. Diels wanted to read ἀπὸ τῶν μαθημάτων, almost certainly intending μαθηματικῶν (as Wachsmuth suggests), ‘the followers of the mathematicians’. This formula can be paralleled—significantly enough only in the *Placita*, viz. at ch. 2.31.2, οἱ ἀπὸ τῶν μαθηματικῶν, and S 1.52.16 at ch. 4.14.3, οἱ ἀπὸ Πυθαγόρου καὶ τῶν μαθηματικῶν. In view of the parallel at ch. 4.13.4 (Ἀρίσταρχος σχήματα συνδιατυπῶντά πως αὐτοῖς τὸν ἄερα (sc. ἀπὸ τῶν σωματῶν φέρεσθαι)) a possible correction would be οἱ ἀπὸ τῶν ἀρχαίων μαθηματικῶν. Wachsmuth ad loc. argues for the transmitted ‘ancients’: ‘significantur enim ei qui philosophiam τῶν ἀρχαίων i. e. Platonis Aristotelisve profitentur’, which in view of the contrast with the corporeal Stoics seems plausible, provided it is restricted to Peripatetics, and Platonists friendly towards Aristotle’s views. οἱ ἀρχαῖοι may pertain to people from long ago, but also to people from not so long ago.

For the unclear name-label οἱ ἀρχαῖοι in P for A 1.17.1 (G substitutes οἱ παλαιότεροι) S has Θαλῆς καὶ οἱ ἀπ’ αὐτοῦ. At ch. 4.2.1 Thales is included among the incorporealists, and Simplicius (perhaps Priscianus) in *de An.* 31.20–26 even argues explicitly that according to him the soul is incorporeal, see at ch. 4.2 Commentary D(b). Even so, it seems doubtful whether we may go as far as include to him among those who hold that sense data are ‘incorporeal *logoi* about bodies they also call ‘shapes’. So it seems best to preserve the ambiguous ἀπὸ τῶν ἀρχαίων.

e Other Evidence

Parallels are found in the first place in Nem (just as in the case of ch. 4.12), who however abridges and paraphrases and has preserved much less material, viz. only passages dealing with the Stoics and Plato. If Nem does not depend on A and his tradition, he must depend on a closely related tradition. Some further parallels are found in Philo, Sextus Empiricus and Arius Didymus. The lemma on *aisthesis* in ps.Galen’s *Medical Definitions* is very complete. Though it lacks name-labels, it provides a good overview of the various options, just like the Aëtian chapter. See at section E(a)§5 below. For Aristotle and Theophrastus see above at section B.

Hdt.* at D.L. 10.48 οὐθέν γὰρ τούτων ἀντιμαρτυρεῖται ταῖς αἰσθήσεσιν, ἀν βλέπη τις τίνα τρόπον τὰς ἐναργείας. **Diogenes Laertius** *V.P.* 10.32 (Epicurus fr. 36 Usener) τὸ τὰ ἐπαίσθηματα δ' ὕφεσθάναι πιστοῦται τὴν τῶν αἰσθήσεων ἀλήθειαν. *V.P.* 10.33 (Epicurus fr. 255 Usener + p. 181 adn. 7) ἐναργεῖς οὖν εἰσιν αἱ προλήψεις. καὶ τὸ δοξαστὸν ἀπὸ προτέρου τινὸς ἐναργεῖς ἡρτηται.

§3 Plato: Plato *Phlb.* 34a (quoted Stob. *Ecl.* 1.50.2b, p. 472.16–21 λέγει δὲ ἐν τῷ Φιλήβῳ ὧδε·) τὸ δ' ἐν ἐνὶ πάθει τὴν ψυχὴν καὶ τὸ σῶμα κοινῇ γιγνόμενον κοινῇ καὶ κινεῖσθαι, ταύτην δ' αὖ τὴν κίνησιν ὀνομάζων αἰσθησιν οὐκ ἀπὸ τρόπου φθέγγοι' ἄν. *Tim.* 43c διὰ τοῦ σώματος αἱ κινήσεις ἐπὶ τὴν ψυχὴν φερόμεναι προσπίπτουσιν· αἱ δὲ καὶ ἔπειτα διὰ ταῦτα ἐκλήθησάν τε καὶ νῦν ἔτι αἰσθήσεις συνάπασαι κέλκηνται. **ps.Plato** *Def.* 414c αἰσθησις ψυχῆς φορὰ· νοῦ κινήσις· ψυχῆς διὰ σώματος εἰσάγγελσις εἰς ὥρας ἀνθρώπων, ἄφ' ἧς γίγνεται ψυχῆς ἄλογος δύναμις γνωριστικὴ διὰ σώματος. **Diogenes Laertius** *V.P.* 3.12 ἔτι φησὶν ὁ Ἀλκιμος (*Ad Amynt. FGrH* 560 F7) καὶ ταυτί· 'φασὶν οἱ σοφοὶ τὴν ψυχὴν τὰ μὲν διὰ τοῦ σώματος αἰσθάνεσθαι οἷον ἀκούουσιν, βλέπουσιν, τὰ δ' αὐτὴν καθ' αὐτὴν ἐνθυμείσθαι μὴδὲν τῷ σώματι χρωμένην.' **Porphyrus** *Sent.* 41.14–16 δῆλον ὡς αἱ μὲν αἰσθητικαὶ δυνάμεις διὰ σώματος κέκτηνται τὸ ἐνεργεῖν.

§4 Peripatetics: Diogenes Laertius *V.P.* 1.21 (on Potamo) ἀρέσκει δ' αὐτῷ, καθὰ φησιν ἐν τῇ Στοιχειώσει, κριτήρια τῆς ἀληθείας εἶναι τὸ μὲν ὡς ὕφ' οὗ γίνεται ἡ κρίσις, τουτέστι τὸ ἡγεμονικόν· τὸ δὲ ὡς δι' οὗ, οἷον τὴν ἀκριβεστάτην φαντασίαν.

§5 Leucippus Democritus: Aristotle *de An.* 1.2 427a19–27 δοκεῖ δὲ καὶ τὸ νοεῖν καὶ τὸ φρονεῖν ὥσπερ αἰσθάνεσθαι τι εἶναι ἀμφοτέροις γὰρ τούτοις κρίνει τι

ἡ ψυχὴ καὶ γνωρίζει τῶν ὄντων καὶ οἱ γε ἀρχαῖοι τὸ φρονεῖν καὶ τὸ αἰσθάνεσθαι ταυτὸν εἶναι φασιν. ... πάντες γὰρ οὗτοι τὸ νοεῖν σωματικὸν ὥσπερ τὸ αἰσθάνεσθαι ὑπολαμβάνουσιν. *de An.* 1.2 427b6–13 ὅτι μὲν οὖν οὐ ταυτὸν ἐστὶ τὸ αἰσθάνεσθαι καὶ τὸ φρονεῖν, φανερόν· τοῦ μὲν γὰρ πᾶσι μέτεστι, τοῦ δὲ ὀλίγοις τῶν ζώων. ἀλλ' οὐδὲ τὸ νοεῖν, ἐν ᾧ ἐστὶ τὸ ὀρθῶς καὶ τὸ μὴ ὀρθῶς, τὸ μὲν ὀρθῶς φρόνησις καὶ ἐπιστήμη καὶ δόξα ἀληθής, τὸ δὲ μὴ ὀρθῶς τάναντία τούτων—οὐδὲ τοῦτό ἐστι ταυτὸ τῷ αἰσθάνεσθαι· ἢ μὲν γὰρ αἴσθησις τῶν ἰδίων ἀεὶ ἀληθής, καὶ πᾶσιν ὑπάρχει τοῖς ζώοις, διανοεῖσθαι δ' ἐνδέχεται καὶ ψευδῶς, καὶ οὐδενὶ ὑπάρχει ᾧ μὴ καὶ λόγος. *Met.* Γ.5 1009b12–15 ὅλως δὲ διὰ τὸ ὑπολαμβάνειν φρόνησιν μὲν τὴν αἴσθησιν, ταύτην δ' εἶναι ἀλλοιώσιν, τὸ φαινόμενον κατὰ τὴν αἴσθησιν ἐξ ἀνάγκης ἀληθές εἶναι φασιν (sc. the Presocratics in general). **Theophrastus** *Sens.* 3–4 Παρμενίδης (28A46 DK) μὲν γὰρ ὅλως οὐδὲν ἀφώρικεν ἀλλὰ μόνον ὅτι δυοῖν ὄντων στοιχείοι κατὰ τὸ ὑπερβάλλον ἐστὶν ἡ γνώσις. ... (4) τὸ γὰρ αἰσθάνεσθαι καὶ τὸ φρονεῖν ὡς ταυτὸ λέγει. *Sens.* 23 (Empedocles 31A86 DK) καὶ συμβαίνει ταυτὸ εἶναι τὸ φρονεῖν καὶ αἰσθάνεσθαι. *Sens.* 25 (Alcmaeon 24B5 DK) ὡς ἕτερον ὃν τὸ φρονεῖν καὶ αἰσθάνεσθαι, καὶ οὐ, καθάπερ Ἐμπεδοκλῆς, ταυτὸν.

§6 Aristotle: *Aristotle Cat.* 8 9b5–8 τῷ δὲ κατὰ τὰς αἰσθήσεις ἐκάστην τῶν εἰρημένων ποιότητων πάθος εἶναι ποιητικὴν παθητικὰ ποιότητες λέγονται· ἢ τε γὰρ γλυκύτης πάθος τι κατὰ τὴν γεύσιν ἐμποιεῖ κτλ. *Phys.* 7.3 247a6–7 γίγνεσθαι δ' αὐτάς (sc. ἀρεταὶ καὶ κακίαι) ἀναγκαῖον ἀλλοιούμενου τοῦ αἰσθητικοῦ μέρους, ἀλλοιωθήσεται δ' ὑπὸ τῶν αἰσθητῶν. *de An.* 2.4 415b24 ἡ μὲν γὰρ αἴσθησις ἀλλοιωσίς τις εἶναι δοκεῖ. *de An.* 2.5 416b33–35 ἡ δ' αἴσθησις ἐν τῷ κινεῖσθαι τε καὶ πάσχειν συμβαίνει, καθάπερ εἴρηται· δοκεῖ γὰρ ἀλλοιωσίς τις εἶναι. *de An.* 2.11 424a1 τοὺς γὰρ αἰσθάνεσθαι πάσχειν τι ἐστίν. *de An.* 2.11 424a4–5 ὡς τῆς αἰσθήσεως οἷον μεσότητός τινος οὕσης τῆς ἐν τοῖς αἰσθητοῖς ἐναντιώσεως. *Somn.* 2 459a24–25 τὰ γὰρ αἰσθητὰ καθ' ἕκαστον αἰσθητήριον ἡμῖν ἐμποιοῦσιν αἴσθησιν. *de An.* 3.1 425a13–15 ἀλλὰ μὴν οὐδὲ τῶν κοινῶν οἷον τ' εἶναι αἰσθητήριόν τι ἴδιον, ὧν ἐκάστη αἰσθήσει αἰσθανόμεθα κατὰ συμβεβηκός, οἷον κινήσεως, στάσεως, σχήματος, μεγέθους, ἀριθμοῦ, ἐνός. *de An.* 3.9 432a30–31 τὸ αἰσθητικόν, ὃ οὔτε ὡς ἄλογον οὔτε ὡς λόγον ἔχον θεῖται ἂν τις ῥαδίως. *Sens.* 1 437a8–9 λέγω δὲ κοινὰ μέγεθος, σχῆμα, κίνησιν, ἀριθμόν. *de An.* 2.6 418a17–18 κοινὰ δὲ κινήσις, ἡρεμία, ἀριθμός, σχῆμα, μέγεθος. *Insomn.* 1 458b4–6 κοινὰ δ' ἐστὶ τῶν αἰσθήσεων οἷον σχῆμα καὶ μέγεθος καὶ κινήσις καὶ τὰλλα τὰ τοιαῦτα. *Mem.* 1 450a12–13 ἡ δὲ μνήμη, καὶ ἡ τῶν νοητῶν, οὐκ ἄνευ φαντάσματος ἐστίν, (καὶ τὸ φάντασμα τῆς κοινῆς αἰσθήσεως πάθος ἐστίν)· ὥστε τοῦ νοῦ μὲν κατὰ συμβεβηκός ἂν εἴη, καθ' αὐτὸ δὲ τοῦ πρώτου αἰσθητικοῦ. **Alexander of Aphrodisias** *de An.* 59.8–9 διὸ καὶ εὐλόγως ἂν τις μεσότητα τὴν αἴσθησιν λέγοι τῆς ἐν τοῖς αἰσθητοῖς ἐναντιώσεως. *de An.* 41.1–5 ἐστὶ δὲ τοιαῦτα (sc. κοινὰ), ὅσα τὸ μὲν γνωρίζεσθαι δι' αἰσθήσεως ἔχει, πλείους μέντοι εἰσὶν αὐτῶν αἰσθήσεις διάκονοι. μεθ' ὧν γὰρ τὸ ἐκάστη αἰσθήσει ἴδιον αἰσθητὸν ὑποπίπτει, μετὰ τούτων καὶ τὰ αἰσθητήρια τὴν ἐπὶ τὴν αἴσθησιν αὐτῶν ποιεῖται διάδοσιν. τοιαῦτα δὲ ἐστὶ κινήσις, ἡρεμία, ἀριθμός, σχῆμα, μέγεθος. *de An.* 50.24–25 ὁμοίως δὲ τῇ ἀκοῇ καὶ τὴν ὄψιν ὑποληπτέον τοῦ διαστήματος ἀντιλαμβάνεσθαι. **Ptolemy** *Iudic.* c. 11, pp. 16.13–17.5 καθ' αὐτὴν μὲν οὖν ἐκάστη τῶν δυνάμεων ὅταν τὸ ἴδιον καὶ οἰκεῖον μόνον ἐπισκοπῇ κατὰ τὸ τῶν συμπεπλεγμένων ἀπερίσπαστον ἀληθεύειν

πέφυκεν· ὡς ὅταν ὀψις μὲν χρώματα· φωνάς δ' ἀκοή· γεύσις δὲ χυμούς· ἀτμούς δ' ὀσφρησίς· ἀφή δὲ ἡ ποιότητάς τ' [perhaps τῶν ἀπτῶν or ἀπτάς ποιότητας]· ... ἄλλαι δ' ἄλλαι συμπλακείσαι καὶ κοινωνήσασαι τῆς τῶν ὑποκειμένων κρίσεως—τοῦτ' ἔστιν ὅταν ἦτοι τῶν αὐτῶν πλείους ὦσιν ἀντιλήψεις, ὡς ἐν μὲν τοῖς αἰσθητοῖς ὄγκου, μεγέθους, πλήθους, σχήματος, θέσεως, τάξεως, κινήσεως. *Opt.* 2.2–3, p. 12.3–13 Lejeune *dicimus ergo quod visus cognoscit corpus magnitudinem colorem figuram situm motum et quietem. ... prius autem incipiamus ab eo* (sc. modo) *qui est secundum dispositionem rerum videndarum: quarum alie videntur vere, alie prime et alie sequenter.* *Opt.* 2.7, pp. 13.17–14.1 Lejeune *colores quidem splendidos cognoscit visus simpliciter; cetera vero per istos, non secundum quod colores, sed secundum quod terminos habent tantum. figures enim et magnitudines cognoscit per terminos rei colorate, situm autem per locum eius. cognoscit etiam ipsorum colorum motum et quietum per mutationes eorum et privationem mutationis.* **Sextus Empiricus** *M.* 9.146 καὶ μὴν ἡ αἴσθησις ἑτεροίως τις ἐστὶν· ἀμήχανον γὰρ τὸ δι' αἴσθησέως τινος ἀντιλαμβάνομενον μὴ ἑτεροιοῦσθαι, ἀλλὰ οὕτω διακρίσθαι, ὡς πρὸ τῆς ἀντιλήψεως διέκειτο. **Themistius** *in de An.* 57.37–38 κοινὰ δὲ πλείων κίνησις ἡρεμία ἀριθμὸς σχῆμα μέγεθος. ἀλλὰ κίνησις μὲν ἀπασῶν κοινόν τι τῶν αἰσθήσεων. *in de An.* 82.36–37 κοινὸν γὰρ τὸ σχῆμα ὕψους καὶ ἀφῆς.

§7 **Stoics:** **Cicero** *Fin.* 3.16 *fieri autem non posset ut appeterent aliquid* (sc. parvi), *nisi sensum haberent sui eoque se diligerent.* **Luc.** 20 *quid de tactu et eo quidem quem philosophi interiorem vocant aut doloris aut voluptatis, in quo Cyrenaici* (fr. IV A 209 Giannantoni) *solo putant veri esse iudicium, quia sentitur.* **Luc.** 76 *quid Cyrenaei* (fr. IV A 209 Giannantoni) *videntur, minime contempti philosophi, qui negant esse quicquam quod percipi possit extrinsecus, ea se sola percipere quae tactu intumo sentiant, ut dolorem ut voluptatem.* **Luc.** 142 *Cyrenaeorum* (fr. IV A 209 Giannantoni), *qui praeter peremotiones intumas nihil putant esse iudicii.* **Lucretius** *DRN* 4.433–439 (on the Epicureans) ... *tactus uterque. / tactus enim, tactus, pro divum numina sancta, / corporis est sensus, vel cum res externa sese / insinuat, vel cum laedit quae in corpore natast / aut iuvat egrediens genitalis per Veneris res, / aut ex offensu cum turbant corpore in ipso, / semina confundunt inter se concita sensum.* **Seneca** *Ep.* 121.5 *quaerebamus, an esset omnibus animalibus constitutionis suae sensus.* *Ep.* 121.11 *infans ... animal esse se sentit.* *Ep.* 121.12 *qualis ad nos ... animi nostri sensus, quamvis naturam eius ignoremus ac sedem, talis ad omnia animalia constitutionis suae sensus est. necesse enim est id sentient, per quod alia quoque sentiunt.* **Plutarch** *SR* 1038C ἡ γὰρ οἰκείωσις αἴσθησις ἔοικε τοῦ οἰκείου καὶ ἀντίληψις εἶναι. **Hierocles** *EL.Eth.* capitulatio 1a Bastianini–Long εἰ αἰσθάν[ε]ται τὸ ζῶον ἑαυτοῦ. *EL.Eth.* col. 1.37–39 Bastianini–Long οὐκ ἀγνοητέον [δ]τι | τὸ ζῷον εὐθὺς ἅμα [τῷ] γεν[έ]σθαι αἰσθάνεται [έ]αυ[τοῦ]. *EL.Eth.* col. 4.38–44 Bastianini–Long ἐπεὶ | τοῖ[νυν] γένος οὐδὲν] ἔτερ[όν] ἐστὶ τ[ὸ] ζῶον ἢ [τὸ] σύνθετον ἐκ σώμα[τος] καὶ ψυχῆς, ἄμφω δ' ἐστὶ θι[κ]τὰ καὶ πρόσβλητα καὶ τῇ [π]ροσ[ε]ρεί[σει] δὴ ὑπόπτωτα, ἔτ[ι] δὲ δι' ὅλων κέκραται, καὶ [θά]τερον μὲν ἐστὶν αὐτῶν δύναμι[ς] αἰσθητικῇ, τὸ δ' αὐτ[ὸ] | τοῦτο καὶ τρόπον, ὃν [ὕ]πεδεῖξ[αμεν], κινεῖται, δῆλον ὅτι δ[ι]ανεκῶς αἰσθάνο[ι]τ' ἂν τ[ὸ] ζῶον] ἑαυτοῦ. *EL.Eth.* col. 6.1–6 Bastianini–Long καθόλου

γὰρ ο[ὐ] σ[υν]υτ[ε]λε[ί]ται τῶν ἐκτός τινος [ἀντ]ίληψις δίχα τῆς ἐ[αυτῶν] αἰσθήσεως. μετὰ γὰρ τ[ῆς] τοῦ λευκοῦ φέρε εἰπεῖν | [αἰσθ]ήσεως καὶ ἑαυτῶν αἰσθανόμεθα λευκαίνοντων καὶ μετὰ | (τῆς) τοῦ γλυκέως γλυκαζομένων καὶ μετὰ τῆς τοῦ θερμοῦ | θερμαινόμενων ἀπὶ τῶν ἄλλων τἀνάλογον. **Ptolemy Iudic.** c. 12.1–2, p. 17.17–18.1 τὰ μὲν οὖν ἀπολελυμένα καὶ πρῶτα κριτήρια χωρὶς λόγου τινὸς αὐτόθεν ἐστὶ καταληπτικά καὶ μὴ δεόμενα κατὰ γε τὴν ἐνάργειαν αὐτὴν ἐτέρας ἀρχῆς· ἀντιλαμβάνεται γὰρ πρῶτον μὲν αὐτῶν καὶ τῶν ἰδίων κινήσεων κατὰ τὴν ἐντὸς συναίσθησιν· ἔπειτα ἤδη τῶν πρῶτων αἰσθητηρίων, καὶ τῶν ὅσα τῶν ἔξωθεν στερέμνια καὶ μετέχοντα τῶν εἰδῶν κτλ. **Galen PHP** 3.1.23–2532 ὁ Χρῦσιππος (*SVF* 2.886, verbatim) ... ὡδέ πως γράφει κατὰ λέξιν· 'κοινῇ δέ μοι δοκοῦσιν οἱ πολλοὶ φέρεσθαι ἐπὶ τοῦτο ὥσανεῖ συναισθανόμενοι περὶ τὸν θώρακα αὐτοῖς τῶν κατὰ τὴν διάνοιαν παθῶν γιγνομένων καὶ μάλιστα καθ' ὃν ἡ καρδία τέτακται τόπον, οἷον μάλιστα ἐπὶ τῶν λυπῶν καὶ τῶν φόβων καὶ ἐπὶ τῆς ὀργῆς καὶ μάλιστα τοῦ θυμοῦ· (ὥσανεῖ γὰρ) ἐκ τῆς καρδίας ἀναθυμιαζόμενον καὶ ὠθυμένον ἐκτός ἐπὶ τινα καὶ ἐμφυσῶντος τὸ πρόσωπον καὶ τὰς χεῖρας γίνεσθαι ἡμῖν ἐμφάσεις'. *Dig.Puls.* 8.792.16–793.11 K. ὅτι δ' οὐ προσίοντος, ἢ ἀπίοντος, ἢ θλίβοντος, ἢ ἀπτομένου, ἢ ἀπωθουμένου πρῶτην αἴσθησιν ἔχομεν, ἄνευ τῶν κατὰ τὸ ἡμέτερον σῶμα παθημάτων, οὐδ' αὐτὸ οἶομαι λαμβάνειν. ... (*SVF* 2.79) πρῶτα γὰρ ἐστὶν αἰσθητὰ ἐν τοῖς ἡμετέροις σώμασι τὰ παθήματα, δεύτερα δὲ τὰ τοῦτων ποιητικά, ἐκτὸς ὑποκείμενα. **Oenomaus of Gadara at Eus. PE** 6.7.10 ἀρὰ γέ τί ἐσμεν ἐγὼ τε καὶ σύ; φαίης ἄν· τοῦτο δὲ ὁπόθεν ἴσμεν; τῷ ποτ' ἄρα τοῦτο εἰδέναι ἐκρίναμεν; ἢ οὐκ ἄλλο ἱκανὸν οὕτως, ὥς ἡ συναίσθησις τε καὶ ἀντίληψις ἡμῶν αὐτῶν; **Diogenes Laertius V.P.** 7.85 καθά φησιν ὁ Χρῦσιππος (*SVF* 3.178) ἐν τῷ πρώτῳ Περὶ τελῶν, πρῶτον οἰκεῖον λέγων εἶναι παντὶ ζῷω τὴν αὐτοῦ σύστασιν καὶ τὴν ταύτης συνείδησιν [συναίσθησιν Dyroff, συντήρησιν Giusta fort. recte sec. Dorandi]. **Plotinus Enn.** 3.4.[15]4.9–10 (on the World Soul) τί οὖν; συναίσθησιν (sc. ἔχει), ὥσπερ ἡμεῖς τῶν ἐντὸς ἡμῶν; *Enn.* 4.4.[28]21–23 ἀλλὰ συναίσθησιν μὲν αὐτοῦ, ὥσπερ καὶ ἡμεῖς ἡμῶν συναισθανόμεθα, δοτέον, αἴσθησιν δὲ αἰεὶ ἐτέρου οὖσαν οὐ δοτέον; **Doxography A** at Stob. 2.7.3c, p. 47.12–20 ὑποτελὶς δ' ἐστὶ τὸ πρῶτον οἰκεῖον τοῦ ζῶου πάθος, ἀφ' οὗ κατήρξατο συναισθάνεσθαι τὸ ζῶον τῆς συστάσεως αὐτοῦ, οὕτω λογικὸν (ὄν) ἀλλ' ἄλογον, κατὰ τοὺς φυσικοὺς καὶ σπερματικοὺς λόγους, ὥσπερ τὸ θρεπτικὸν καὶ τὸ αἰσθητικόν, καὶ τῶν τοιούτων ἕκαστον ῥίζης τόπον ἐπέχει, οὐδὲ πω φυτοῦ· γενόμενον γὰρ τὸ ζῶον ὠκειώθη τινὶ πάντως εὐθὺς ἐξ ἀρχῆς, ὅπερ ἐστὶν ὑποτελὶς, κεῖται δ' ἐν τινι τῶν τριῶν· ἢ γὰρ ἐν ἡδονῇ [sc. according to Epicurus] ἢ ἐν ἀσχηλσίᾳ (according to the Megarians?) ἢ ἐν τοῖς πρῶτοις κατὰ φύσιν (sc. according to the Stoics).

§9 The followers of the ancients: Sextus Empiricus M. 10.259 (cf. Xenocrates F 43 Isnardi Parente²) καὶ τὰ στερεὰ σχήματα προεπινοεῖται τῶν σωμάτων, ἀσώματον ἔχοντα τὴν φύσιν κτλ. **Corpus Hermeticum** fr. 8.4 Nock–Festugière at Stob. *Ecl.* 1.4.8, p. 73.14–16 τρίτον δὲ ἐστὶν εἶδος ἀσώματων ὃ περὶ τὰ σώματα ἐστὶ συμβεβηκός, τόπος, χρόνος, κίνησις, σχῆμα, ἐπιφάνεια, μέγεθος, εἶδος.

§10 Leucippus Democritus Epicurus: Cicero Fin. 1.21 *quae sequitur sunt tota Democriti* (frs. 182, 470 Luria), *atomi, inane, imagines, quae εἰδῶλα nominant, quorum incursione non solum videamus, sed etiam cogitemus.* *ND* 1.108 *vos autem non modo oculis imagines sed etiam animis inculcatis.* **Lucretius**

DRN 4.752–756 nunc igitur docui quoniam me forte leonum / cernere per simulacra, oculos quaecumque lacessunt, / scire licet mentem simili ratione moveri / per simulacra leonum (et) cetera quae videt aequae / nec minus atque oculi, nisi quod mage tenuia cernit. **Clement of Alexandria** *Strom.* 5.13.87.3 Δημόκριτος (69A79 DK) ... τὰ γὰρ αὐτὰ πεποίηκεν εἰδῶλα τοῖς ἀνθρώποις προσπίπτοντα καὶ τοῖς ἀλόγοις ζῴοις ἀπὸ τῆς θείας οὐσίας.

§11 Anonymi: Diogenes Laertius *V.P.* 7.45 (*SVF* 2.53) τὴν δὲ φαντασίαν εἶναι τύπωσιν ἐν ψυχῇ, τοῦ ὀνόματος οἰκείως μετενηνεγμένου ἀπὸ τῶν τύπων τῶν ἐν τῷ κηρῷ ὑπὸ τοῦ δακτυλίου γινομένων.

§12 Stoics: Cicero *Luc.* 108 (*SVF* 2.73) *dicunt enim Stoici sensus ipsos ad sensus esse.* **Porphyry** *Περὶ τῶν τῆς ψυχῆς δυνάμεων* 253F Smith at Stob. *Ecl.* 1.49.25a, p. 349.23–27 τῶν ἀπὸ τῆς Στοᾶς (*SVF* 2.74) τὴν αἴσθησιν οὐκ ἐν τῇ φαντασίᾳ ἰστάντων μόνον, ἀλλὰ τὴν οὐσίαν ἀναρτῶντων ἀπὸ τῆς συγκαταθέσεως. αἰσθητική γὰρ φαντασία συγκατάθεσις ἐστὶν ἢ αἴσθησις τῆς συγκαταθέσεως καθ' ὁρμὴν οὔσης.

§13 Academics: Porphyry *Περὶ τῶν τῆς ψυχῆς δυνάμεων* 253F Smith at Stob. *Ecl.* 1.49.25a, pp. 349.28–350.7 κατὰ μέντοι τοὺς πρεσβυτέρους καὶ τοὺς ἀπὸ τῆς Ἀκαδημίας ἢ αἴσθησις ἐπὶ τῆς δι' αἰσθητηρίου φαντασίας ψιλὴ τίθεται καὶ διὰ τοῦτο οὐδὲ κατ' ἀρχὰς μέτοχος ἰδιώματος, ὅτι μὴδὲ συγκαταθέσεως μέτοχος. καὶ ἢ δὲ μετὰ συγκαταθέσεως συγκατακειμένη φαντασία δι' αἰσθητηρίου ἢ αἴσθησις, οὐ πάντως καὶ ἀρετῆς μέτοχος ἢ αἴσθησις ἔσται, εἰ μὴ συγκατάθεσις εἴη τῶν ἐφ' ἡμῖν.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

(1) The witnesses are P as represented by P^B, P^G, and P^Q, as well as S. P^{BQ} have a mere three lemmata, two of which are more or less paralleled in P^G. S on the other hand has no less than twenty lemmata, all of which except §3 (Aristotle) and §11 (Pythagoras Plato) are extant only in S^L, the Florentine florilegium, cf. ch. 4.8 above at Commentary A(1). T as we have seen stopped excerpting A after ch. 4.7a, the last chapter to be paralleled in the CAG.

(2) It should be noted that S in *Ecl.* 1.50 has combined blocks of lemmata from at least three chapters, viz. 4.8, 4.9, and 4.10, see ch. 4.8 at Commentary

A (2), and below, ch. 4.10 at Commentary A(3). The lemma on desire and food at *Ecl.* 1.50.25 p. 476.8–10 Wachsmuth, namely ‘Parmenides and Empedocles declare that desire arises from a deficiency of food’ (Παρμενίδης Ἐμπεδοκλῆς ἐλλείπει τροφῆς τὴν ὀρεξιν), which Diels incorporated in his ch. 4.9.14 because it occurs in the midst of lemmata belonging with ch. 4.9, in fact belongs in ch. 5.28 Πόθεν αἱ ὀρέξεις γίνονται τοῖς ζώοις καὶ αἱ ἡδοναί (‘From where do desires arise in living beings and also pleasures’), see ch. 5.28.2 (and ch. 5.28 Commentary A and D(c)), while the Democritus lemma at *Ecl.* 1.50.35, p. 477.18–19 Wachsmuth ‘Democritus (says) that dead bodies have sensation’ (Δημόκριτος τὰ νεκρὰ τῶν σωμάτων αἰσθάνεσθαι), which became ch. 4.9.20 Diels, is an abstract from ch. 4.8, so has been cited by us at the above location.

B Proximate Tradition and Sources

(1) *Proximate tradition.* Parallel doxographical evidence is found in the other ps.Plutarch, *Stromateis* ch. 4, who however has only excerpted material dealing with Xenophanes, Parmenides, and Zeno. For the proximate tradition we have also adduced several fragments of Aristocles, which are rather similar to what is in Cicero. For Cicero cf. below, section D(e).

(2) *Sources.* Diels *DG* 222, in his too optimistic presentation of the (in our view meagre) evidence for the descent of sections and lemmata of the *Placita* from Theophrastus’ *De sensibus*, cites §15 Empedocles and *Sens.* 16 as ‘similia’, adding that the words κατὰ δὲ τὸ ἐλλείπον πρὸς τὴν ἀναπλήρωσιν ‘certa a Theophrasto tacta non sunt. sed optima est memoria et cum Empedoclea doctrina egregie consentiens’, just as is the case in chs. 4.14.1 and 4.17.2. ‘Ergo nisi alibi Theophrastus illa repetierat, ipsius philosophi verba nescio quo pacto innotuisse videntur.’ Several lemmata of the present chapter are related to what is found in Theophrastus’ treatise, e.g. the pithy §16 Anaxagoras is remarkably close to the first clause at *Sens.* 29. The information about Presocratic philosophers is also in a more general way indebted to Aristotle. About the sources for the Hellenistic theories nothing much can be said, though such parallels as are available inspire some confidence.

C Chapter Heading

A very precise heading, and one of the eleven headings beginning with εἰ; for the other ten see chs. 1.5, 2.3, 2.4, 4.3, 4.9, 4.15, 4.20, 5.4, 5.5, and 5.15. S in the heading of *Ecl.* 1.50 (a combination of the headings of A 4.8 and 4.9) omits καὶ φαντασίαι. The wording of the full heading is to some extent paralleled in an introductory formula at Diogenes Laertius *VP.* 7.49 (*SVF* 2.52) ‘the Stoics are wont to start with the account of impression and sensation’ (ἀρέσκει τοῖς Στωικοῖς τὸν περὶ φαντασίας καὶ αἰσθήσεως προτάττειν λόγον), though the terms are

listed the other way round. Aristotle in the *De anima* announced his treatment of *phantasia* at 3.3 427b29, ‘determining the nature of impression/imagination’ (περὶ φαντασίας διορίσαντας), and at the end of what has become a chapter in our modern editions neatly concluded it with 429a8–9 ‘let this suffice as to the nature and cause of impression/imagination’; he refers to this section at *Mem.* 1 449b30–31. This type of embedded formula is the predecessor of the heading, or title, see M–R 2.1.48, 159–161, 162–163, 170, 202–204. Epicurus wrote a book entitled *On impression*. For these texts see below, section E(b) Chapter heading. The title of S *Ecl.* 1.58 (alternative to that of P 4.12) is Περὶ φαντασίας καὶ κριτηρίου, the second ingredient of which is remarkably enough not paralleled in A.

D Analysis

a Context

Chapter 4.9 is the second of a series of five substantial chapters concerned with cognitive issues in a more general way. It deals with the reliability of sensations and impressions (truth or falsity: category/question-type of quality), and follows upon the chapter dealing with the nature of sensation(s) and sense objects in general (category/question-type of substance), and with where (category of place) and how (question-type of cause) they occur or are found. It is itself then followed by a chapter concerned with the number of the senses (category of quantity). We note again the importance of treatment according to categories and question-types.

In Aristotle (as in A) the account of the senses’ reliability is also found before that of the individual senses (*de An.* 2.6). In Lucretius (*DRN* 4.478–521) it has been wedged in between the treatment of vision and that of hearing etc.

b Number–Order of Lemmata

As noted T has not excerpted the chapter. The relative order of P^{BQ}’s three lemmata is exactly the same as that of the three lemmata in S^L that as to contents are parallel to those in P^{BQ}, so we may assume that it is correct to follow the order of S^L, as we have done. The large amount of material in S suggests that he excerpted A’s complete chapter. Our order of lemmata is the same as Diels’ in the *DG*, though we have omitted ch. 4.9.14 and 4.9.20 Diels (see at section A above), and split up 4.9.8 and 4.9.16 Diels into two lemmata each.

c Rationale–Structure of Chapter

The structure of this rich chapter is comparable to that of ch. 4.8, for here, too, a variety of interrelated themes are included. Six blocks of lemmata consisting of related tenets in more or less diaphonic opposition may be dis-

tinguished. As a matter of fact the contents of ch. 4.9 could have been distributed over several separate chapters. There are a quite unusual number of name-labels occurring more than once, namely Pythagoras (twice), Parmenides (twice), Anaxagoras (three times), Empedocles (three times), Democritus (three times), Plato (twice), Academics (twice), Stoics (twice), and Epicurus (four times). This may suggest that S, our only source for §§1–3 and the long series of §§7–20, coalesced several chapters. Because it is not clear where the caesurae would have to be (there are several options), we have not ventured to interfere with the single chapter.

The first block, §§1–5, comprises variously opposed views concerned with the truth-value of sensation(s), from the thesis of Pythagoras & *alii* in §1 that the sensations are false (the impressions are not mentioned), to the diaphonically opposed and famous thesis of Epicurus in §5 that every sensation and every impression is true, and that falsity is a matter of the opinion. In between we have three tenets that gradually grow more distant from the negative view of Pythagoras & *alii* and closer to the positive view of Epicurus. This gliding scale is systematic rather than chronological: the Academics of §2 are not Plato's immediate pupils but representatives of the Sceptical Academy, just as those mentioned at chs. 4.8.13 above and 4.9.19 below.

The second block, §§6–7, opposes those who argue that each sense organ perceives its proper object in a mechanical way because of the matching sizes of the pores, to those who hold that the proper sense objects are perceived depending on the (actual) capacities of the sense organs.

The third block, §§8–9, opposes the majority who hold that sense objects are natural, i.e. exist in reality, to (a simplified version of the views of) Leucippus, Democritus and Diogenes, who argue that they are a matter of convention, or habit, and that only the atoms and space are natural, i.e. real, and true.

The fourth block, §§10–11, opposes the Atomists and those representing similar theories, who defend the sophisticated view that all sense objects are blended and none exist in a pure state, so that things get their name from the dominating ingredient, to Pythagoras and Plato who, on the contrary, are said to argue that sense objects do exist in a pure state, and that each of the five elemental substances is adapted to a specific sense organ, or conversely.

The first four blocks together deal with perception of sense data by the sense organs.

The fifth block, §§12–17, deals with a different kind of sense objects, namely the pleasant and the painful. Thus awareness of internal sense data appears to be included (cf. above ch. 4.8, Commentary D(d)§7, and below, ch. 4.11, Commentary D(d)3).

The block begins with a group of three doxai, §§12–14, comprising two diaphonically opposed tenets and one compromise view. Epicurus (§12) holds that pleasures and pains belong with the sense objects, but the Peripatetics (§13) are made to disagree: visual objects like black and white appear the same to everyone, but pleasant and painful things do not, so they must be counted among the objects of thought. The reasonable compromise tenet (§14) is adorned with the name-label Chrysippus: the pleasant in general is an object of thought, but the individual pleasant thing one encounters is a sense object. From these factual statements we then switch to a tenet concerned with a materialist and mechanical explanation of the origin of pleasant or painful sensations (the question-type of cause): Empedocles (§15) argues that pleasures come about when what is lacking is compensated for by something similar, and pains when something dissimilar intrudes. The block ends with two opposed views (§§16–17): according to Anaxagoras every sensation is painful, but according to the others pleasure or pain do not inhere to the sense objects, but are supervenient upon them. We should make a distinction between perceptions of pleasure and pain per se on the one hand (§§12–14), and of pleasure or pain (§15), or pain (stress) alone (§16), as unavoidable ingredients of perception, or as after-effects (§17), on the other.

The sixth and final block, §§18–20, returns to the issue of the contrast between sensation and thought of §§12–14, but in a particular way, viz. by dealing with the question, all-important in Hellenistic philosophy, of how you are supposed to know that someone is a Wise Man. The Stoics hold that the Wise Man can be grasped by sensation if one uses his individual appearance as a sign (which is the beginning of an argument). The Academics, on the other hand, hold that he becomes known by reason (or argument). The view attributed to Epicurus does not fit either one of the horns of this diaphonia, for he idiosyncratically applies the doctrine of like knows like, and posits that the Wise Man can only be identified by another Wise Man—thus dodging the epistemological issue.

d Further Comments

Individual Points

§1 The name-labels constitute a checklist of predecessors claimed by Pyrrhonists and Academics alike. See below, section E(a) & (b), both times at §1.

Note that Sextus too argues that Parmenides rejects sense perception (after citing 28B7.3–5 DK immediately following on after 28B1), although the ‘tongue’ in these lines is not the organ of taste but the instrument of speech, see Barnes (1979) 296–297, Coxon (1986) 182, and Mansfeld (2018b). This quotation and interpretation are also found in D.L. 9.22, see Rocca-Serra (1987) 261–264, who

proves that they go back to a shared source (or tradition). See now Mansfeld (2018c). Pythagoras may have been included as the predecessor of Plato, i.e. is the Platonizing Pythagoras usually encountered in the *Placita*.

§2 For a possible connection between the contents of this lemma and the anonymous Commentary on Plato's *Theaetetus* and Potamo's epistemology as described by Diogenes Laertius (cited at section E(b)§2) see Hatzimichali (2011) 88–89.

§3 The account of Aristotle's evaluation of sensation is far from complete, but not false. The phrase Ἀριστοτέλης τὴν αἴσθησιν μὴ πλανᾶσθαι περὶ τὸ ἴδιον, περὶ δὲ τὸ συμβεβηκός has been abstracted from *de An.* 2.6 418a11–12 λέγω δ' ἴδιον μὲν ὁ μὴ ἐνδέχεται ἐτέρῳ αἰσθῆσαι αἰσθάνεσθαι, καὶ περὶ ὁ μὴ ἐνδέχεται ἀπατηθῆναι. His concept of *phantasia* is wider than 'impression', for it also includes imagination; but in the present chapter this does not matter.

§§4–5 Usener reallocated §5 καὶ ἡ ... νοητῶν from the Epicurus lemma to the Stoics lemma, §4. But perhaps the phrase ψευδοποιεῖται τὰ κατὰ νοητά pertains to the Epicurean idea of the connection of thoughts with sensations as a possible source of error. Yet one understands Usener's problem, for the second sentence of the lemma remains difficult to explain.

§6 Parmenides, Empedocles, Anaxagoras and Democritus are discussed in Theophrastus *De sensibus*, who credits Empedocles, Anaxagoras and Democritus with (matching) pores and perceptibles, and this doctrine is now also attributed retroactively to Parmenides, who according to *Sens.* 1 shares the 'by likeness doctrine' of sense perception with Empedocles. Laks (1990) 16 argues that the phrase ἀλλὰ καὶ ταύτην δεῖσθαι τινος συμμετρίας at *Sens.* 3 means that the hot element according to Theophrastus has to match what it perceives. It is certainly plausible that the phrase was interpreted in this way and so helps to understand our lemma, but far from certain that it is correct. We believe that Theophrastus means that the mixture should not become too hot, cf. on Democritus on the mind that becomes unhinged at *Sens.* 58. One cannot, at any rate, introduce pores at *Sens.* 3.

§9 The Diogenes coupled with Leucippus and Democritus can hardly be anyone else than Diogenes of Smyrna (or Cyrene), a pupil of Metrodorus of Chius. Diels *DG* 676, referring to the present lemma, says 'Placitorum fortasse hoc [sc. §9] ad eum referendum'. See Laks (2008) 239–240, who points out that there are other name-labels too that occur in the *Placita* only once. Whether or not the doxographer believed that the Smyrnaean is the same person as the Apollonian or did not care, is another matter. The ethnonym Ἀπολλωνιάτης of ch. 1.3.10 is also found at ch. 4.3.8. Repetition elsewhere of the ethnonym or affiliation after the first introduction is rare, and suggests that in such cases the doxographer wanted to preclude confusion. But the name-

label Diogenes occurs several times without *ethnicon*, and it is (for us) sometimes difficult to know who is meant. At 1.7.7, Διογένης καὶ Κλεάνθης καὶ Οἰνοπίδης τὴν τοῦ κόσμου ψυχὴν, sc. τὸν θεόν, one should probably think of Diogenes the Stoic. But Diogenes of Apollonia cannot be excluded, see Aristotle's view of him at *de An.* 1.2 405a21–24 in context, and Theophrastus' at *Sens.* 42: ὁ ἐντὸς ἀὴρ αἰσθάνεται μικρὸν ὢν μόνιον τοῦ θεοῦ. Also cf. Commentary D(d) at ch. 4.3.2.

For the *doxa* cf. above, ch. 1.15.8 'Democritus (says that) no colour exists by nature, for the elements are without quality, being the solids (i.e. atoms) and the void. But the compounds formed from these are coloured by 'turning', by 'rhythm' and by 'inter-contact', of which the first means order, the next shape and the last position. For it is on the basis of these that the impressions (on the senses arise)'. See further above, ch. 1.15 Commentary B, sources. The present paragraph gives us a more Skeptical Democritus.

§11 The first application in the present chapter of the well-known maxim 'like to like' or 'like knows like'. Aristotle first interprets and quotes Empedocles ('by earth we see earth' etc., see below, §15), and then refers to Plato's construction 'of the soul out of the elements in the *Timaeus*', explaining that according to Plato 'like can only be known by like' and 'things are derived from the principles' (*de An.* 1.2 404b11–18). Aristotle does not tell us that the elements out of which Plato constructs the soul at *Tim.* 35a are derived from the Forms of the Same, the Different, and Being. A reader coming upon this passage in the *De anima* immediately after the quotation of Empedocles could perhaps believe that Plato's soul is constructed out of earth etc. For the relation between the senses and the four elements fire, air, water, and earth later interpreters were in a position to refer to *Tim.* 45b–c (fire: sight—where note 45c4 ὁμοιον πρὸς ὁμοιον), 67b (hearing: air), 65c–d (taste: water and earth), and 66d (smell: a *Zwischenelement*, viz., the intermediate between water and air). See Baltes (1999) 40–42, who *ibid.* 35–36 lists thirteen passages where the senses are related to the elements. As a fourteenth we must add ch. 4.4.6. Baltes convincingly argues, *ibid.* 42–46, that the minority view according to which the five senses are connected with five elements, i.e., the standard four plus the aether, goes back to the Early Academy. Ps.Plato *Epinomis* 981b–c mentions five elements, with aether as fifth; the five regular bodies of *Tim.* 53c–56b were interpreted as representing elements; and Speusippus in Athenaeus *Deipn.* 2 61c (fr. 5 Lang, F 123 Isnardi Parente, 6 Tarán) speaks of what he calls a Pythagorean theory, according to which there are five elements corresponding to the five regular bodies. Only Plutarch *De E* 390B and A 4.9.11 (= 4.9.10 Diels) mention the aether when speaking of a correspondence between sight and one of the elements, see Baltes *ibid.* 35, 37 (but A 4.4.6 should be included as well, where

a Pythagorean doctrine is cited with aether as one of five elements). See also Dörrie-Baltes (1998) 190, 192–193, with commentary 564, 567–570, where it is concluded that the five-elements-doctrine is a ‘Randerscheinung’ in ancient Platonism.

A related issue occurs in long-distance diaphonic opposition at A 4.9.5, name-label Democritus: there are more senses than kinds of sense-objects.

At A 2.7.4 four or rather five elements are attributed to Plato: Πλάτων πῦρ πρῶτον εἶτ’ αἰθέρα μεθ’ ὃν ἄερα ἐφ’ ᾧ ὕδωρ, τελευταίαν δὲ γῆν· ἐνίοτε δὲ τὸν αἰθέρα τῷ πυρὶ συνάπτει, ‘sometimes he links up aether with fire’. See Dörrie-Baltes (1998) 190 with commentary 564; *ibid.* 190–194 with commentary 558–570, parallel passages.

§13 This is second application of the maxim ‘like to like’ (we note the presence of the word ὁμοίου).

§15 Diels *DG* 222 argues in favour of a clear link with *Sens.* 18, rightly endorsed by Baltussen (1993) 215.

§16 Not mentioned by Diels or Baltussen, but the *placitum* is clearly dependent on a phrase in *Sens.* 16. According to this information Anaxagoras made no distinction between outer and inner sensation.

§18 For the argument from signs see Chrysippus’ *ipsissima verba* at Galen *PHP* 2.7.6 (~ *SVF* 2.887) οὕτω φαίνεται διαφεύγειν ὁ τόπος ἡμᾶς οὔτε αἰσθήσεως ἐκφανοῦς γιγνομένης, ὅπερ ἐπὶ τῶν λοιπῶν συντέτευχεν, οὔτε τῶν τεκμηρίων δι’ ὧν ἄν τις συλλογίσαιτο τοῦτο.

§20 This view is also attributed to Xenophanes in an anecdote which has him chatting with Empedocles, see below, section E(b)§20.

e Other Evidence

Of particular importance is the agreement on a large scale between our present chapter and Cicero’s critical reportage of earlier views on sensation in the *Lucullus*, for which see at section E(a) General texts. This connection does not appear to have been noticed before. We have already observed a similar relationship between the chapters on the soul’s substance, regent part, and indestructibility (A 4.2–3 and 4.7) and Cicero’s treatment of these matters in the *Tusculanae disputationes*. See also below, Introduction to Book 5, section 5, on Ciceronian parallels for chs. 5.1–2 and 5.24–25. The relationship again proves dependence on a shared anterior tradition. Cicero’s stance in the *Lucullus* is that of an Academic. This lends some support to the suggestion of Mansfeld (1990a) 3063–3064, who argues for Academic influence on the *Placita*.

E Further Related Texts

a Proximate Tradition

General texts: Cicero *Luc.* 19 *ordiamur igitur a sensibus. quorum ita clara iudicia et certa sunt, ut, si optio naturae nostrae detur et ab ea deus aliqui requirat contentane sit suis integris incorruptisque sensibus an postulet melius aliquid, non videam quid quaerat amplius. nec vero hoc loco expectandum est dum de remo inflexo aut de collo columbae respondeam; non enim is sum qui quidquid videtur tale dicam esse quale videatur; Epicurus (fr. 252 Usener) hoc viderit et alia multa. meo autem iudicio ita est maxima in sensibus veritas, si et sani sunt ac valentes et omnia removentur quae obstant et impediunt. Luc. 142–143 venio enim iam ad tertiam partem philosophiae. aliud iudicium Protagorae (—) est qui putet id cuique verum esse quod cuique videatur, aliud Cyrenaicorum (fr. Commentary

A Witnesses

(1) The witnesses for P are only P^B and P^Q. G has not excerpted the chapter. Ps prefers a chapter entitled *Περὶ τῶν πέντε αἰσθήσεων* that brings together a series of brief descriptions or definitions of the senses equivalent to A 4.13 & 16–19 (but using P as his model).

(2) T, as we have noticed, is no longer excerpting A.

(3) S has six lemmata, which are divided over two different chapters, viz. *Ecl.* 1.50 and 1.51: three of them, i.e. ch. 4.10.3 + 4.10.5–6, are at *Ecl.* 1.50.7–9, pp. 473.20–474.5. These excerpts according to Diels interrupt the sequence of lemmata S abstracted from ch. 4.8, while Wachsmuth ad loc. prefers to locate them in that chapter (see above, ch. 4.8, Commentary A(2) and ch. 4.9, Commentary A(2) and A(4)). Three more lemmata, i.e. ch. 4.10.1–2 + 4.10.4, are found in the next Stobaeon chapter, *Ecl.* 1.51.2–4, pp. 481.17–482.8. All the lemmata of S except ch. 4.10.2 (Aristotle) are extant only in ms L, the Florentine florilegium, cf. above, ch. 4.8 Commentary A(1).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition is poor. Unfortunately other evidence for views pertaining to more than the five canonical senses, and in particular to the views of Democritus, is virtually non-existent.

(2) *Sources.* Aristotle several times discusses the issue of the number of the senses and resolutely defends the number five, e.g. *de An.* 3.1 425a13–b11. So does Alexander of Aphrodisias, e.g. *de An.* 66.1–9. The Stoics too limit the number of the senses to five. We do not know how this reliable information reached the *Placita*.

C *Chapter Heading*

A precise heading, in P, concerned with the category of quantity, and confirmed by the first part of the heading of S 1.51, a short chapter which has the long and detailed heading ‘How many senses are there, and what is the substance and performance of each?’ (Πόσαι εἰσὶν αἱ αἰσθήσεις καὶ ποίας οὐσίας καὶ ἐνεργείας ἕκαστη). For the dialectical aspect of the question word see above, ch. 1.1, Commentary C. This long version, added by Wachsmuth from Photius and the index of S^L, looks ahead to the chapters treating the individual senses. Alexander of Aphrodisias in the introduction to his Commentary on Aristotle’s *De sensu* mentions as one of the topics of the *De anima* ‘on the function of sensation ... and saying what it is and in how many senses it is divided’ (περὶ τῆς αἰσθητικῆς δυνάμεως ..., καὶ τίς τέ ἐστιν εἰπὼν καὶ εἰς πόσας αἰσθήσεις διαιρεῖται, in *Sens.* 1.5–7).

D *Analysis*

a Context

Chapter 4.10 is the third of a series of five chapters concerned with cognitive issues in a more general way. It deals with the number of the senses (category of quantity), and follows upon the chapter dealing with the reliability of sensations and impressions (truth or falsity: category/question-type of quality). It is followed by two chapters (4.11–12) specially devoted to Stoic views on these issues, dealing respectively with the cognitive process from sensation to concept-formation, and with distinctions between various forms of real or imaginary impressions.

b Number–Order of Lemmata

P has only three lemmata, S more. As indicated above there is a difference of opinion between Diels and Wachsmuth. According to Diels S provides six lemmata for the present chapter divided between *Ecl.* 1.50 and 1.51, according to Wachsmuth only three, in *Ecl.* 1.51 (see above, section A). Diels argued

that §§3 and 5–6 of ch. 4.10 had been wrongly coalesced by S in 1.50 with the lemmata from ch. 4.8, while Wachsmuth believed that they really belong in ch. 4.8. For the first of these L, the Florentine florilegium, which is the only source for S here, has the enigmatic name-label πελλῆς in §3. Diels *DG* 399b13 prints †Ἀπελλῆς, Wachsmuth *Ecl.* 1.473.21 †πελλῆς (see below, section D(d)§3). But Wachsmuth needed to change the text of §3 from πλείους into ἄλλοιους (and even to suggest that πελλῆς is a corruption of the regular name-label Ἐμπεδοκλῆς) in order to create a diaphonic connection between the Aristotle lemma ch. 4.8.6, according to which the *sensus communis* is shared to some extent by the animals, whereas ch. 4.10.3 (with this conjecture!) appears to deny this commonality. It is clear that this reconstruction needs too many extra hypotheses, and that Diels, who fished out lemmata dealing with the category of quantity, must be right. The fact that the text of §3 in *Ecl.* 1.50 anticipates that of §4 in *Ecl.* 1.51 is a further argument in favour of Diels' rearrangement, as he already pointed out himself. The fact that the two Democritus lemmata §4 and §5 have virtually the same beginnings (§4 Δημόκριτος πλείους εἶναι αἰσθήσεις, §5 Δημόκριτος πλείους μὲν εἶναι τὰς αἰσθήσεις) may have contributed to the creation of the false lemma §3 in S, as Diels ad loc. already suggested. The strange name-label πελλῆς is combined with a duplication of the first part of §4. It could have been relegated to the critical apparatus, but we have left it in the text, as an illustration of what may happen with doxai.

The lemmata order. The sequence of lemmata from §1 to §4 is not the same in P and S if we take the order of the chapters into account. For §§5–6 we follow the order of S, and their final position is warranted by the fact that in S they come after §3, itself a misguided anticipation of §4, so they follow after §4. Our reconstruction of the chapter and the order of its lemmata thus turns out to be the same as that of Diels in the *DG*.

c Rationale–Structure of Chapter

The rationale of the chapter is quite straightforward. The lemmata are arranged according to number (category of quantity), starting with the standard quintet in §1. In §2 Aristotle too sticks to five senses, though he adds the *sensus communis* (as in ch. 4.8.6). The other side of the diaeresis is provided by two Democritus lemmata. The first, §4, claims that there are more senses (than five, of course)—interestingly enough claiming this not only and perhaps with some justification for gods and animals, but also for Wise Men. The second, §5, takes up the theme of chs. 4.4.6 and 4.9.11, namely the issue of the relation between the number of the senses and the number of the kinds of elemental sense objects. Democritus is credited with the view that there are more senses than kinds of sense objects, but it is not clear how this should work out in rela-

tion to human beings, Wise Men, gods, and animals. The anonymous §6 (one wonders who these ‘others’ may be) provides a compromise tenet; or rather one which fails to fit the diaeresis, because ‘equally balanced’ may perhaps be both less and more than five.

d Further Comments

Individual Points

§2 For the passage [4] κοινήν ... [7] κινήσεως repeated from ch. 4.8.2 see at this chapter, Commentary D(d)§6.

§3 The doxa is duplicated from the next lemma, as Diels noted. The first letter of the name-label is lacking in the Laurentianus ms., but present in Photius’ index (cod. 167, p. 114a27 Henry), as noted by Elter (1880) 41. An Ἀπελλῆς is on the list of pupils of Chrysippus at Philodemus *Index Stoicorum* col. 47.3, who may or may not be identical with the Ἀπολλᾶν in Chrysippus’ catalogue at Diogenes Laertius *V.P.* 7.193 (where the *recentiores* read ἀπελλᾶν) and *V.P.* 7.197. The proper name Πελλῆς does exist but is quite rare (Apollonius Rhodius *Arg.* 1.177, Diodorus Siculus 4.3.23); no intellectual of this name is known. It seems safest to follow Diels and obelize the lemma.

§5 A related issue occurs in long-distance diaphonic opposition at ch. 4.4.6 and ch. 4.6.11, name-labels respectively ‘Pythagoras’ followers’ and ‘Pythagoras Plato’, where the number of the kinds of sense-objects equals that of the senses.

e Other Evidence

The number of the senses is not only discussed by Aristotle in the *De anima*, but is also one of three main criteria for distinguishing and classifying doctrines in Theophrastus’ *De sensibus*, see Mansfeld (1996). He discusses views also according to the number of senses involved (category of quantity): a first group (who believe perception occurs ‘by similarity’) beginning with Parmenides who failed to determine the number, then Plato with two (!) senses, sight and hearing—numbered, as we know, by Plato himself as ‘third’ (*Tim.* 67a τρίτον) and ‘fourth’ (67c τέταρτον) ‘perceiving part’ (αἰσθητικὸν ἐν ἡμῖν μέρος)—, and finally Empedocles with five. Then a second group (who believe perception occurs ‘by contrast’), comprising *inter alios* Alcmaeon with four senses (as it would appear) and Anaxagoras with five. See section E(b) General texts. More than five is only a side issue in *de Sens.* 6 (Plato did not say whether there are other senses than the canonical five), while in the present chapter the main diaeresis according to quantity is between five senses or more (more than five are attributed to Democritus), and less than five is not mentioned. The relation to the *De sensibus* is even more faint than in ch. 4.8; cf. above, 4.8, Commentary D(a).

The first author to mention the five canonical senses is Empedocles (31B3.10–13 DK); one cannot say that Parmenides is concerned with sense perception in a specific way because for him eyes, ears, and tongue (as the organ of speech, 28B7.4–5 DK) are means of judgement and communication rather than sense organs, just as eyes and ears are for Heraclitus (22B55, B101a DK), see Mansfeld (1999d) and (2018b). The Hippocratic author cited at section E(b)§3–5 puts (what we would call) mental and sensorial faculties on a par.

The parallels for a discussion of the number of the senses reveal that the issue, though not spectacular, was often related to that of the number of elemental sense-objects, see Baltes (1978).

We now know that animals have more or other senses than we do, think of electric sense, magnetic sense, echolocation, and infrared and ultraviolet vision (e.g. von Frisch proved that bees do not see red but see ultraviolet). For Montaigne and Leibniz speculating on animal senses unknown to us see Strickland (2016) 78–79.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The only witnesses for chs. 4.11 and 4.12 are P^B and P^Q, supported by P^P with consecutive snippets for §1[16–17], and partly confirmed by P^G. For this chapter G has included all but §1[6–7] and the final part from [22] ὥσπερ in his *Epitome*. Heading and text of S are lost, but since part of the heading of its companion chapter, 4.12, is preserved in the index of Photius, it is quite certain that originally it was also present in S. T as we have seen had no use for chapters after 4.7a. For its presence in A (Diels believed it had been added by P) see also above, Introduction to Book 4, section 5.

There is no multiplicity of *Placita* lemmata in the usual sense of the word in our witnesses. The chapter is thus in fact monolemmatic, cf. below, section D(b).

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. In the proximate tradition parallel accounts of concept formation according to the Stoics are provided by Sextus Empiricus and Diogenes Laertius, cited below at section E(a) General texts, to which we may add the Epicurean account in Diogenes Laertius discussed below, section D(e), and cited at section E(b) General texts. Something is also found in the cousin writing of Nem, but the passage from *NH* c. 14, cited below (*par acquit de conscience*) at section E(a)§1[16–18], is rather distant from our chapter. On the other hand *NH* c. 12 contains a parallel to ch. 4.21.1 and begins with a backward glance at *NH* c. 6, which is parallel to ch. 4.12, which in its turn is a sort of continuation of the present chapter. The parallels with Ptolemy's *On the Criterion and Hegemonikon* §12, an account conforming to mainstream opinion (Long 1998), show that Stoic view of concept formation is also widely taken into account by others.

(2) *Sources*. Direct provenance from a Stoic source, as Diels *DG* 61 already surmised, is virtually certain because ch. 4.11 is entirely in *oratio recta* ('The Stoics say'), and with the exception of the introductory phrase ('Chrysippus says that these four are different from one another') the companion piece ch. 4.12 is in *oratio recta* too. *Oratio recta* is comparatively rare in the *Placita*. As intermediary source we may suppose a Stoic handbook, or one containing Stoic doctrine, just as is the case for chs. 4.12, 4.15 and 4.21. In this context the verbal first persons plural §1[8] 'we say' (φαμέν) and §1[14] 'we are called' (προσαγορευόμεθα) and the personal pronoun §1[21] '(to) us' (ἡμῖν), contrast significantly with the descriptive verbal third persons §1[3] 'he has' ἔχει, §1[5] 'he transcribes' (ἐναπογράφεται) and §1[7] 'they have' (ἔχουσιν). Interesting is also the difference

between ‘we say’, that is, we teachers, philosophers, Stoics on the one hand, and ‘we are called’, that is: ‘we humans’ on the other, the possession of *logos* being a defining trait of being human as well as divine according to Stoic doctrine, as is also expressed by the phrase §1[20] ‘to the gods and to us’ (τοῖς θεοῖς καὶ ἡμῖν). The parallels show that this terminology and these notions had become ingredients of a philosophical *koine*. See also further below ch. 4.12, at Commentary B.

C Chapter Heading

A long, detailed and precise heading, focused on the question type of cause. For the dialectical aspect of the question word see above, ch. 1.1, Commentary C, and for headings containing the formula πῶς γίνεταί (or γίνονται): (‘how do/does *x* come to be’) see above, ch. 1.4 at Commentary C. The heading also adverts us to ingredients lacking in the text of P’s excerpt. This is the only case of the formula in Book 4, but there are a further nine instances in Book 5, indicating a strong interest in causal explanation. P^B’s text is confirmed by P^G and P^Q. This time there is not even (part of) a heading in S, though he has a partial one for the heading of ch. 4.12.

D Analysis

a Context

Chapter 4.11 is the first of two paired chapters dealing with aspects of exclusively *Stoic* views on concept formation, sensation, and thought, so not set off against those of other philosophers. That they belong together, though A in his usual scholastic manner has distributed the contents over different chapters, is also clear from parallel accounts of concept formation for which see below, at section D(e). The lack of references to views ascribed to others is unusual, though there are other cases of chapters devoted to a single doctrine only, e.g. Atomist doctrine in ch. 1.4, or Stoic in chs. 4.15 and 4.21. Our two chapters follow on after chs. 4.9–10, which deal in the standard Aëtian way with multiple views concerning the issues of what sensation and sense-objects are, and of how many senses there are. They are followed by chs. 4.13–20, devoted to varieties of views concerned with the individual senses, and to views on issues connected with these individual senses, namely the nature of mirror images (4.14), of darkness (4.15), and of voice (4.19–20). The two chapters 4.11 and 4.12 are in part different from each other, because the meaning of the crucial word φάντασμα in ch. 4.11 is different from that in ch. 4.12. In this way we are perhaps made aware of a difference of views among Stoics whom we cannot identify further here. Compare e.g. ch. 1.14.5–6, where Cleanthes is ‘the only one among the Stoics’ to hold that the shape of fire is conical. The contrast may have pleased the com-

piller of the *Placita*, since it agrees with the genre's penchant for diaphonia, and thus may have favoured the inclusion of the chapters in the collection in this format.

Diels *DG* 61 rejected chs. 4.11–12 out of hand as foreign to the original polylemmatic doxographical tradition and methodology, and solved what he saw as the problem of their presence by arguing their provenience from a Stoic source. We, however, see the presence of these items as a conscious effort to improve and upgrade the account by including in the *texte vivant* a substantial (and for us today indispensable) account of Stoic views after the general chapters on sense perception and before those on the individual senses, all of which provide less information on the Stoics. So here too we are faced with the insertion of other material in an exposition that by and large follows an originally Aristotelian pattern, just as is the case of ch. 4.5 on the regent part (see M–R 2.1.37, 39, 147–148). For parallels with and differences from the Stoic doxography in Diogenes Laertius *V.P.* Book 7 see above, Introduction to Book 4, section 5.

b Number–Order of Lemmata

There is no need to divide this chapter into numbered lemmata, though Diels did so (as with §1 of ch. 1.7). We are dealing with a single name-label and a single doctrine. We have divided this over eight unnumbered sections to help follow the complicated argument.

c Rationale–Structure of Chapter

In the absence of a plurality of views there is no diaeretic and/or diaphonic structure. The account describes and causally explains ontogenetic processes and their outcome, and cites the definitions of several important terms: §1[9] ἐμπειρία, [12–13] ἔννοια and προλήψις as distinguished from each other, and [16–22] ἐννοήμα and φαντάσμα as both different from each other and to some extent convergent. These definitions are perfect and sectarian ((as opposed to nominal or conceptual definitions, see above, ch. 1.9, at Commentary D(d)), and describe the individuality of these general concepts by means of individual examples. By way of a conclusion this peculiar situation is illustrated by a typically Stoic simile.

d Further Comments

General Points

(1) This account of cognitive ontogenesis seems to mirror that of cognitive phylogenesis. Little is known of a Stoic *Kulturentstehungslehre*, but something is about their view of the origin of language from ‘primary sounds’, or ‘words’

(πρωταὶ φωναί, Origen *C.C.* 1.24; *cunabula verborum*, Augustine *De dial.* c. 6.10.9) and the development of further vocabulary from these through e.g. ‘proximity’ (*vicinitas*), or ‘resemblance’ (*similitudo*), or ‘transfer’ (*abusio*), i.e. varieties of analogy, or through ‘contrast’ (*contrarium*, all in Aug. *De dial.* c. 6). The relation between these ‘words from the cradle’ and those in such ways derived from them is analogous to that of the relation between ‘natural’ concepts and those produced by our ‘teaching and instruction’. For well-founded suggestions in this direction see Allan (2005) 15–17, 23–30, for the texts below section E(b)§1[6–15]. A parallel for the distinction between the two kinds of concepts is found in the two kinds of perception admitted by Diogenes of Babylon, namely ‘natural’ (αὐτοφύης) and ‘scientific’ (ἐπιστημονικός) perception; see section E(b)§1[10–13].

(2) As to sensation the emphasis is on the receptive side of the process, unlike in ch. 4.21.

(3) The chapter heading promises more than the text of the chapter delivers, for we are not told how a sensation comes about, or what is the *logos* we acquire. In our text no *other* ‘manner’ follows after the ‘first (or: primary) manner of registration’ of §1[6], which is of a particular type of sense object and so instantiates physical preconceptions. Scholars have debated whether the ‘memories’ of §1[8] represent a further such manner. *Pace* Long–Sedley (1987) 2.241 we believe that this is not the case. §1[10–11] speaks of ‘aforesaid ways’ (plural), but only one way has so far been mentioned and described, so a second way of primary concept formation has been the victim of epitomization. §1[14–15] fails to tell us that the reason, or speech, mentioned there is not just reason in general but the *logos endiathetos* announced in the heading: further proof of abridgement. For what follows see also Mansfeld (2013b).

As is clear from the examples provided at §1[6–7], this first, or primary, manner is actualized through each of the individual senses, and pertains to *external* objects and their sense data: colours, sounds, smells and so on (cf. also ch. 4.12.1[5–8]). This leaves room for a manner of registration that does not occur via the individual senses but through the *oikeiosis* (‘appropriation’) of the psycho-corporeal person as a whole: the ‘inner touch, according to which we are also aware of ourselves’, to cite ch. 4.8.7 (at this earlier chapter see also Commentary D(d) §7, and the texts there cited at section E(b)§7). The parallel passage on (Stoic) concept-formation from Ptolemy cited below section E(b) General texts, includes a reference to inner perception. Also see the passage on self-awareness and *oikeiosis* in Stobaeus’ *Ethical Doxography A*, cited *ibid.* Note that the Stoic Hierocles, *El.Eth.* col. 1.44–46 Bastianini–Long, argues against ‘slow-witted opponents who believe that sensation has only been given by nature to the living being for awareness in relation to external objects, and

not also in relation to that of itself' (δοκοῦσι γὰρ τὴν αἴσ[θη]σιν ὑπὸ τῆς φύσεως αὐτῷ δι[(ε)]δύσθαι πρὸς τὴν τῶν ἐκτὸς [ἀ]ντίλη[ψιν], οὐκέ[τι δὲ καί] πρὸς τ[ῇ]ν ἑαυτοῦ). This is incontrovertible evidence for a standard second manner of registration and concept formation. Compare the distinction between the perception of external data such as hot and white, and the clarity of internal data of a moral nature at Plu. *CN*1070C, 'and this too in matters concerning good things and evil and objects of choice and avoidance and things congenial and repugnant, the clarity of which ought to be more manifest than that of things hot and cold and white and black, since the impressions are incidental to sensations entering from without whereas the former are generated intrinsically from the starting-points within us' (tr. Cherniss LCL, modified). See Pohlenz (1940) 92–93, and Babut at Casevitz–Babut (2002) 216–219. *Oikeiosis* takes place from the moment of birth through 'awareness' (αἴσθησις) of the self and then of what is pleasant or painful in the sense of what needs to be accepted or rejected: i.e. proto-ethical notions. See the passages cited above at ch. 4.8, section E(b)§7, from Cicero *Fin.* 3.16 (who mentions the *parvi*), Sen. *Ep.* 121 (who 121.8 mentions the *infans*), Diogenes Laertius *VP.* 7.85, and above all Hierocles' *Ethike Stoiceiosis*; cf. Inwood (1999), Long (1999), and esp. Bastianini–Long (1992) 379–396, Long (1996c); see further above at ch. 4.8, Commentary D(e)§9. Relevant is also the passage on the *hypotelis* (a term attested for Herillus at Diogenes Laertius *VP.* 7.165 = *SVF* 1.411), or sub-*telos*, at *Doxography A* at Stob. *Ecl.* 2.7.3c, p. 47.12–20: 'the *hypotelis* is the first proper condition (*pathos*) of the living being, from the moment that the living being began to be aware of its own condition (ἀφ' οὗ κατήρξατο συναισθάνεσθαι τὸ ζῶον τῆς συστάσεως αὐτοῦ), when it is not yet rational but irrational, according to the natural and spermatic *logoi* in the same way as the vegetative and sentient faculties, and of such faculties it occupies the place of a root, not yet of a plant; for when the living being is born it accommodates itself to something right from the start; this is the *hypotelis*.' Strangely, Solmsen (1961) 622 argues that the Stoic concept of αἴσθησις was 'probably stripped clear of the irrational accretions of pleasure and pain'.

The notion of self-awareness or inner sensation is at home in the world of the *Placita*. At ch. 4.8.7, however, it has not been preserved in P's epitome, but only in S's more generous abstract of the chapter! And as we argue it is also lost in P's abridgement of ch. 4.11, while in the present case no comfort is forthcoming from the parallel abstract of S, irretrievably lost. We therefore believe that one of the consequences of P's abridgment of A's chapter is the loss, or rather the elimination, of a reference to the acquisition of ethical preconceptions, understandable in an epitomized doxography concerned with physics. The argument contra of Dyson (2013) is neither here nor there. It is perfectly possible to make sense of the evidence concerning Stoic concept formation

inclusive of our actual ch. 4.11 without assuming that something is missing in it, which is what Dyson does or attempts to do, but this does not entail that the picture provided by the text of P's abstract alone is complete.

Secondary concepts do not have a natural origin (§1[10] φυσικῶς), but a cultural one (§1[11–12] δι' ἡμετέρας διδασκαλίας καὶ ἐπιμελείας), so need not be treated in detail in a physical treatise. For the acquisition of certain ethical conceptions—not preconceptions—by teaching according to 'Aristotle'. See further below, section D(d) General texts (3). A passage in Sextus Empiricus, on which see Reesor (1989) 57, reveals the relation between inner reason and ethical issues (*P.* 1.65, quoted at section E(b)§1[14–15]).

(4) For concept formation both natural and cultural see also above, ch. 1.6, 'From where did human beings obtain a conception of gods', with Commentary D(c) and D(e).

Individual Points

§1[3–5] The regent part of the soul of the newborn human is compared with a sheet of papyrus in a certain condition. The formula χαρτὴν εὐεργόν εἰς ἀπογραφὴν should not be translated as 'a sheet of paper ready for writing upon'. On such a *tabula rasa* one may write anything, which can hardly be the point of a passage that illustrates the *reliability* of what is 'written', that is, of the preconceptions. Engberg-Pedersen (1990) 252 n. 1 rejects the notion of a *tabula rasa* and translates 'well adapted for writing upon' (his italics). The word εὐεργόν (cf. Diogenes Laertius *V.P.* 7.136 ~ *SVF* 1.102, 2.580) entails that the χάρτης, the papyrus, is of the kind that has been specially prepared to warrant the legibility of the written text and the survival of the document (for information on the various qualities of papyrus available and the purposes for which they were used see Pliny the Elder, *Nat.* 13.24). The word ἀπογραφὴ does not just mean 'writing', but stands for 'transcript', or 'copy'; the quality and condition of the papyrus enable one to produce a good and durable copy of an original. Note that in spite of the announcement in the heading we are not told *how* the sensations come about, only *that* this happens: P clearly has abridged something out of the text. The papyrus simile (only one case in Rolke 1975, 38) may well be an alternative to that of the writing tablet, the literal impression (*typosis*) upon which by the *phantasia* was rejected as being too crude by Chrysippus (at Diogenes Laertius *V.P.* 7.50 ~ *SVF* 2.55 etc.). The papyrus sheet reminds one of Aristotle's 'tablet which bears no actual writing' (γραμματεῖω ᾧ μὴθὲν ἐνυπάρχει ἐντελεχεῖα γεγραμμένον) at *de An.* 3.4 430b30–a2, and of Plato's tablet representing memory at *Thet.* 191c–d.

§1[8–9] Formation of the class of concepts called 'preconceptions' (see at §1[10–13] below) through the accumulation and unification of memories of

impressions impressively recalls well-known passages from Aristotle's *Metaphysics* and *Posterior Analytics*, cited and discussed by scholars in this context and cited at section E(b)§1[3–9]. This ingredient is consistent with the Peripatetic background of the *Placita*, cf. M–R 2.1.71, 147–148, 152. For a comparable presence of Aristotelian phraseology see above, ch. 4.8.1, Commentary D(e). So the present chapter shows the extent to which Stoic epistemology is indebted to Aristotle's pioneering efforts. In Aristotle the part of epistemological theory that deals with concept formation in some detail is much less clear and exhaustive than the Stoic doctrine, and therefore less interesting from a didactic point of view as well. It is found dispersed over various places, esp. *APo.* 1.18 81b1–9, *APo.* 2.19 99b36–100a6, and *Met.* A.1 980a28–981a1 (see below at section E(b)§1[3–9]). Cf. also *de An.* 3.4–6, on *nous* and thought, which is about the means and instruments of acquiring knowledge, so psychological rather than epistemological. The interpretation of these passages is not easy, and they are not fully, or at least not easily, compatible with each other. What is more, in the *De partibus animalium* 1.1 641a33–b10 the study of *nous* insofar as it is related to the objects of thought, which perhaps amounts to the study of the objects of thought themselves, is excluded from physics. This appears to be in conflict with what happens in the *De anima* (on this controversial passage see Kullmann 2007, 309–311, with references to the discussion). And Aristotle's doctrine lacks an account of the formation of (secondary) concepts from other concepts, or 'by teaching and instruction', and the useful distinction between secondary 'concepts' and 'preconceptions'.

§1[10–13] *προλήψεις*, 'preconceptions': this is not the place for an account of the discussion concerned with the complicated history and interpretation of the Epicurean and Stoic notion of *prolepsis*. On the formation of preconceptions in childhood see Frede (1999a) 315, 319–320, who translates the word as 'anticipations' and helpfully emphasizes that they come to us naturally and unavoidably and 'just capture the common content of cognitive impressions'. At Diogenes Laertius *VP.* 7.54, 'the preconception is a natural conception of the universals' (ἔστι δ' ἡ πρόληψις ἔννοια φυσικὴ τῶν καθόλου), with emphasis on *natural*.

§1[15] *κατὰ τὴν πρώτην ἑβδομάδα*: this process reaches its completion 'at the age of seven years', see above on Cicero *Fin.* 3.16 (*parvi*), Seneca *Ep.* 121.6 (*infans*). The *logos prophorikos*, not mentioned here (presumably another sign of epitomization), is completed at age fourteen, when sexual maturity is reached—so is not merely a matter of *logos* in the sense of speech or reason in the cognitive sense consisting of the preconceptions, but also of *logos* in the productive sense: a part of the divine *Logos* that at age fourteen becomes generative and so comparable to the divine *Logos*, who is generative all the time.

The ages of man are the theme of ch. 5.23, where P's coalesced monolemmatic text is rather different from G's triad of lemmata which we prefer, see ad loc.; but even so matters are far from clear. It deals not only with the first seven years, the only hebdomad of the present chapter, but also with the second and third seven years period. The first and second are attributed to Heraclitus and the Stoics (standard Stoic doctrine), but only mention physical not mental development, while the present chapter only mentions the latter. But the second view, of Aristotle, is quite close to the present Stoic view, attributing a beginning of ethical consciousness and instruction to the first hebdomad. An anonymous third doxa puts mental and physical development as late as the third hebdomad.

§1[15] The meaning of 'apparition' (φάντασμα) here is close to the neutral, or even positive, usage of Aristotle (e.g. *Mem.* 1 449b31–450a1) and Epicurus (e.g. *Ep.Hdt.* at Diogenes Laertius *V.P.* 10.75, *Ep.Pyth.* at *V.P.* 10.88), and different from that in the next chapter, where it means 'figment' (as also occurs in Arist. *Protr.* fr. 101). For these texts see below at section E(b)§1[15–17]. It is not certain that this usage is really Stoic. See Long–Sedley (1987) 2.185, who argue that 'this text is completely out of step with all the other Stoic evidence on ἐννοήματα'.

§1[17] For Q's addition *Sprache der Griechen* (app. crit.) cf. chs. 1.8 (heading), 2.1.1[2], 3.7.2[6], 4.12.1[9], and 4.19.3[7]. He points out the derivation of *Einsicht* (ἐννόημα) from *Verstand* (νοῦς) which is not obvious in Arabic.

§1[22–24] *Denarii* and staters, when used to pay for a trip on board a boat, are not only called *denarii* and staters but also 'boat trip fare', ναῦλα. A comparable name change is found in a passage of Clement about the different names of the one virtue as depending on the circumstances, the gift of which has plausibly been attributed to Zeno's pupil Aristo (Clement *Strom.* 1.20.98 ~ *SVF* 1.376): 'one and the same drachma is called boat trip fare when given to the shipowner, tax when to the tax collector, rent when to the landlord, pay when to the teacher, and deposit when to the seller'. It has not been seen that what is in A is an update of what is in Clement: in P the drachma has been replaced by other coinage. Q has even preserved the drachma three times, which may well be right. The stater is a Greek coin, already cited in early texts and here present, apparently, to represent the Greek side of the purse (just as drachma in Q, who has this coin name instead of stater and appears to have preserved the original coinage). The *denarius*, Greek δηνάριον, is a Roman coin, which does not seem to have become a common currency in the Greek East before the first century CE. The word turns up for the first time in literary (or semi-literary) texts in the first century CE, for the earliest such attestations are several passages in the *New Testament*, and, surprisingly, the present Aëtian lemma. Diels *DG* 101 noticed the presence of the two coin types, but said he failed to see why

both were needed; the unknown Stoic author of the original simile in his view should have been content with the stater alone. So A had a Roman public in mind, unless (Diels says) it was P who interpolated the denarius. But one may phrase this insight in a more positive way, and argue that apart from illustrating an interesting detail of Stoic epistemology the simile not only confirms the probable date for the Aëtian *Placita*, but also (just as chs. 4.11–12 themselves) testifies to the process of updating such functional and therefore open texts were subjected to; see M–R 1.xix–xx, M–R 2.1.99, 139, 148.

e Other Evidence

See above, and also section E(a)&(b), in each case General texts.

The account of the Stoic doctrine of concept formation at Diogenes Laertius *VP*. 7.52–53 (*SVF* 2.87) is not entirely clear, so we slightly reorder the list. The acquisition of concepts ‘by confrontation’ (κατὰ περίπτωσιν, sc. of sense objects, αἰσθητά) or ‘naturally’ (φυσικῶς, e.g. of moral notions like δίκαιόν τι καὶ ἀγαθόν) on the one hand is combined with nine ways of deriving concepts from other concepts on the other, namely by means of ‘similarity’ (καθ’ ὁμοιότητα), ‘transposition’ (κατὰ μετάθεσιν), ‘analogy’ (κατ’ ἀναλογίαν, both ‘by magnification’, αὐξητικῶς, and ‘by diminution’, μειωτικῶς), ‘combination’ (σύνθεσιν), ‘opposition’ (κατ’ ἐναντίωσιν), ‘transition’ (κατὰ μετάβασιν), or ‘privation’ (κατὰ στέρησιν). These nine ways need not be discussed in a physical treatise.

The various versions of this doctrine in Sextus Empiricus, too, make a proper and explicit distinction between what is acquired ‘by confrontation’ on the one hand and in various ways derived from other concepts on the other. Ptolemy too makes this distinction, and moreover includes the inner perception, or awareness (τὴν ἐντὸς συναίσθησιν), lacking in these other accounts; his version begins with it. Interestingly, he states that we become aware of our sense organs before we perceive exterior sense data. And he includes the φαντάσματα (‘figments of the imagination’) which are among the subjects of A’s next chapter, 4.12. Sextus Empiricus *M*. 7.241 (*SVF* 2.64) briefly states that ‘the impression (φαντασία) is produced either by what is outside or by our inner experiences’. Lammert (1917) ad loc. in his edition of Ptolemy’s *On the Criterion* pp. 17–18 excellently lists the parallels in the *Placita*, Sextus Empiricus, and Diogenes Laertius.

The doxographical Epicurean account at Diogenes Laertius *VP*. 10.32–33, cited section E(b) General texts, is remarkably parallel to the Stoic doctrine. It begins with what is a quasi-quotation of Epicurus, for it refers to the *Letter to Herodotus* and *Kuriat Doxai* together without corresponding to anything in either of these works verbatim. It deals with the origin of concepts from the senses/sensations, including the secondary concepts generated by means of combination etc. only mentioned but not described in our chapter, but

described in detail in the Stoic doxography at Diogenes Laertius *V.P.* 7.53 (cited above, and below at section E(a) General texts), followed by a description of the preconception as deriving from the memory of what has repeatedly shown itself in the outside world.

According to the Stoics the process of combination is a matter not of nature but of culture, while according to Lucretius *DRN* 4.728–743 the perception and notion of a centaur derive from the combination out there of a part of the image of a human being coalesced with one of a horse, so is natural, and this also holds for *cetera de genere hoc*, although Centaurs etc. do not exist as living beings (cf. also *DRN* 5.886–898). Asmis (1984) 21–24 and 61–66 argues that what we have at Diogenes Laertius *V.P.* 10.31–33 is the attempt of later Epicureans to explain the doctrine of the master (cf. 10.33 λέγουσιν). It is clear that some of the wording (καταλήψεις, περιπτώσεις) of this doxographical account, and so to some degree its contents, has been influenced by the Stoic doctrine, as argued e.g. by Manuwald (1972) 9–10 and Glidden (1985) 181–186. Aristotelian ideas about this process (see above, section D(d)§1[8–9]) colour both the Stoic and the Epicurean account. The terse reference in the Epicurean text to the perceptions of the mad (plus the dreaming, true according to Epicurus) parallels the long final section of the next chapter, ch. 4.12[18–28], so that the Epicurean account combines ingredients from, or is to some extent parallel to, both our *Placita* chapters. This is also true of Sextus Empiricus *M.* 8.56–60, cited below section E(a) General texts. See also further below at ch. 4.12, Commentary D(e).

E Further Related Texts

a Proximate Tradition

General texts: Aquilius *Def.* 8 Rashed ἔννοιά ἐστι νόησις ἑναποκειμένη τῇ ψυχῇ. *Def.* 10 μνήμη ἐστὶ σωτηρία νοήσεως. Sextus Empiricus *M.* 3.40–42 καθόλου τε πᾶν τὸ νοούμενον κατὰ δύο τοὺς πρώτους ἐπινοεῖται τρόπους· ἢ γὰρ κατὰ περίπτωσιν ἑναργῇ ἢ κατὰ τὴν ἀπὸ τῶν ἑναργῶν μετέβασιν, καὶ ταύτην τρισσὴν· ἢ γὰρ ὁμοιωτικῶς ἢ ἐπισυνθετικῶς ἢ ἀναλογιστικῶς κτλ. *M.* 8.56–60 (*SVF* 2.88) πᾶσα γὰρ νόησις ἀπὸ αἰσθήσεως γίνεται ἢ οὐ χωρὶς αἰσθήσεως, καὶ ἢ ἀπὸ περιπτώσεως ἢ οὐκ ἄνευ περιπτώσεως. ὅθεν οὐδὲ τὰς λεγομένας ψευδεῖς φαντασίας, οἷον τὰς καθ’ ὕπνου ἢ τὰς κατὰ μανίαν, εὐρήσομεν ἀπηρτημένας τῶν διὰ τῆς αἰσθήσεως κατὰ περίπτωσιν ἡμῖν ἐγνωσμένων. καὶ γὰρ ὁ κατὰ μανίαν Ἑρινύας αὐτῷ ἀναπλάσσων ‘τὰς αἱματωποὺς καὶ δρακοντώδεις κόρας’ (*Eur. Or.* 256) ἐκ τῶν πεφηγνόντων αὐτῷ σύνθετον μορφήν νοεῖ (for ὅθεν ... νοεῖ see below, ch. 4.12 section E(b)§1[20–28]). ... (58) καὶ καθόλου οὐδὲν ἔστιν εὐρεῖν κατ’ ἐπίνοιαν ὃ μὴ ἔχει τις αὐτῷ κατὰ περίπτωσιν ἐγνωσμένον. τοῦτο γὰρ ἢ κατὰ ὁμοιότητα τῶν ἐν περιπτώσει πεφηγνόντων ληφθήσεται ἢ κατὰ παραύξησιν ἢ κατὰ μείωσιν ἢ κατ’ ἐπισύνθεσιν. ... (60) πάσης οὖν ἐπινοίας προηγείσθαι δεῖ τὴν διὰ τῆς αἰσθήσεως περίπτωσιν. *M.* 9.393–394 καθόλου τε τὸ ἐπινοούμενον πᾶν ἦτοι κατ’ ἐμπέλασιν τῶν ἑναργῶν νοεῖται ἢ

κατὰ τὴν ἀπὸ τῶν ἐναργῶν μετάβασιν, ... (394) κατ' ἐμπέλασιν μὲν οὖν τῶν ἐναργῶν νοεῖται ὡς λευκὸν καὶ μέλαν καὶ γλυκὺ καὶ πικρὸν· ταῦτα γὰρ καὶ εἰ αἰσθητὰ ἐστίν, ἀλλ' οὐδὲν ἦττον νοεῖται. **Diogenes Laertius V.P.** 7.52–54 ἡ δὲ κατάληψις γίνεται κατ' αὐτοὺς (*SVF* 2.84) αἰσθήσει μὲν λευκῶν καὶ μελάνων καὶ τραχέων καὶ λείων ... (*SVF* 2.87) τῶν γὰρ νοουμένων τὰ μὲν κατὰ περίπτωσιν ἐνοήθη, τὰ δὲ καθ' ὁμοιότητα, τὰ δὲ κατ' ἀναλογίαν, τὰ δὲ κατὰ μετάθεσιν, τὰ δὲ κατὰ σύνθεσιν, τὰ δὲ κατ' ἐναντίωσιν. (53) κατὰ περίπτωσιν μὲν οὖν ἐνοήθη τὰ αἰσθητὰ ... νοεῖται δὲ καὶ κατὰ μετάβασιν τινα, ... φυσικῶς δὲ νοεῖται δίκαιόν τι καὶ ἀγαθόν. ... (54) ... ἔστι δ' ἡ πρόληψις ἔννοια φυσικὴ τῶν καθόλου (*Posid. F* 42 E.-K., 460 Theiler, but the definition of πρόληψις will be Chrysippean).

§1[3–13] **Stoics: Nemesius NH** c. 13, pp. 68.15–69.4 τὸ δὲ μνημονευτικὸν ἐστὶ μνήμης καὶ ἀναμνήσεως αἰτίον τε καὶ ταμειῖον. ἔστι δὲ μνήμη, ὡς μὲν Ὀριγένης [*Ἀριστοτέλης Morani alii*] φησὶν, φαντασία ἐγκαταλελειμμένη ἀπὸ τίνος αἰσθήσεως τῆς κατ' ἐνέργειαν φαινομένης, ὡς δὲ Πλάτων (*Phlb.* 34a), σωτηρία αἰσθήσεως τε καὶ νοήσεως· ἡ γὰρ ψυχὴ τῶν μὲν αἰσθητῶν διὰ τῶν αἰσθητηρίων ἀντιλαμβάνεται καὶ γίνεται δόξα (e.g. *Tht.* 179c), τῶν δὲ νοητῶν διὰ τοῦ νοῦ καὶ γίνεται νόησις· ὅταν οὖν τοὺς τύπους (*Tht.* 192a) ὧν τε ἐδόξασεν ὧν τε ἐνόησε διασῶζη, μνημονεύειν λέγεται. ἔοικε δὲ νόησιν λέγειν ὁ Πλάτων ἐν τούτοις οὐ τὴν κυρίως νόησιν, ἀλλὰ τὴν διανόησιν· τὰ μὲν γὰρ αἰσθητὰ μνημονεύεται καθ' ἑαυτά, τὰ δὲ νοητὰ κατὰ συμβεβηκός, ἐπειδὴ καὶ τῶν διανοητῶν ἡ μνήμη ἐκ προλαβούσης φαντασίας περιγίνεται· τὰ δὲ κυρίως νοητὰ, ὅτι μὲν ἐμάθομεν ἢ ἠκούσαμεν, μεμνήμεθα, τῆς δὲ οὐσίας αὐτῶν μνήμην οὐκ ἔχομεν· οὐ γὰρ ἐκ προηγησαμένης φαντασίας ἢ τῶν νοητῶν ἀνάληψις, ἀλλ' ἐκ μαθήσεως ἢ φυσικῆς ἔννοιας.

§1[8–9] **Stoics: David Prol.** 44.5–6 (version of the *technē*-definition differs from those at *SVF* 1.73, where ἐμπειρία is lacking) ἡ πάλιν τέχνη ἐστὶ σύστημα ἐκ καταλήψεων ἐμπειρία συγγεγυμνασμένη πρὸς τι τέλος εὐχρηστον τῶν ἐν τῷ βίῳ. [Cf. Aristotle *Met.* A.1 980a28–981a16, cited below section E(b)§1[3–9]]

§1[10–13] **Stoics: Diogenes Laertius V.P.** 7.54 (—) ἔστι δ' ἡ πρόληψις ἔννοια φυσικὴ τῶν καθόλου.

§1[14–15] **Stoics: Sextus Empiricus M.** 8.275 (*SVF* 2.223) φασιν, ὅτι ἄνθρωπος οὐχὶ τῷ προφορικῷ λόγῳ διαφέρει τῶν ἀλόγων ζώων (καὶ γὰρ κόρακες καὶ ψιττακοὶ καὶ κίτται ἐνάρθρους προφέρονται φωνάς), ἀλλὰ τῷ ἐνδιαθέτῳ.

§1[16–18] **Stoics: Nemesius NH** c. 14, p. 71.9–13 ἔστι δὲ ἐνδιάθετος μὲν λόγος τὸ κίνημα τῆς ψυχῆς τὸ ἐν τῷ διαλογιστικῷ γινόμενον ἄνευ τινὸς ἐκφωνήσεως, ὅθεν πολλάκις καὶ σιωπῶντες λόγον ὅλον παρ' ἑαυτοῖς διεξερχόμεθα καὶ ἐν τοῖς ὄνειροις διαλεγόμεθα. κατὰ τοῦτο δὲ μάλιστα λογικοὶ πάντες ἐσμέν· οὐ γὰρ οὕτω κατὰ τὸν προφορικὸν λόγον ὡς κατὰ τοῦτον. καὶ γὰρ οἱ ἐκ γενετῆς κωφοὶ καὶ οἱ διὰ πάθος ἢ νόσημα τὴν φωνὴν ἀποβαλόντες οὐδὲν ἦττον λογικοὶ εἰσιν.

b Sources and Other Parallel Texts

General texts: Plato *Men.* 86c ἔγωγε ἐκείνο ἂν ἤδιστα, ὅπερ ἡρόμην τὸ πρῶτον, καὶ σκεψαίμην καὶ ἀκούσασαι, πότερον ὡς διδασκῶ ὄντι αὐτῷ δεῖ ἐπιχειρεῖν, ἢ ὡς φύσει ἢ ὡς τίνι ποτὲ τρόπῳ παραγιγνομένης τοῖς ἀνθρώποις τῆς ἀρετῆς (etc. etc.). **Diogenes Laertius V.P.** 10.31–33 (*Epicurus frs.* 457 & 255 Usener) λέγει

δὲ καὶ ἐν τῇ Πρὸς Ἡρόδοτον ἐπιτομῇ καὶ ἐν ταῖς Κυρίαις δόξαις ... (32) ... ὕφεστηκε δὲ τό τε ὁρᾶν ἡμᾶς καὶ ἀκούειν ὥσπερ τὸ ἀλγεῖν· ὅθεν καὶ περὶ τῶν ἀδῆλων ἀπὸ τῶν φαινομένων χρῆσθαι σημειοῦσθαι. καὶ γὰρ καὶ αἱ ἐπίνοιαι πάσαι ἀπὸ τῶν αἰσθήσεων γεγόνασιν κατὰ τε περίπτωσιν καὶ ἀναλογίαν καὶ ὁμοιότητα καὶ σύνθεσιν, συμβαλλομένου τι καὶ τοῦ λογισμοῦ. τὰ τε τῶν μαινομένων φαντάσματα καὶ (τὰ) κατ' ὄναρ ἀληθῆ, κινεῖ γάρ· τὸ δὲ μὴ ὄν οὐ κινεῖ. (33) τὴν δὲ πρόληψιν λέγουσιν οἰοῦναι κατὰληψιν ἢ δόξαν ὀρθὴν ἢ ἔννοιαν ἢ καθολικὴν νόησιν ἐναποκειμένην, τουτέστι μνήμην τοῦ πολλάκις ἔξωθεν φανέντος, οἷον τὸ 'τοιοῦτόν ἐστιν ἄνθρωπος'. ἅμα γὰρ τῷ ῥηθῆναι 'ἄνθρωπος' εὐθὺς κατὰ πρόληψιν καὶ ὁ τύπος αὐτοῦ νοεῖται προηγουμένων τῶν αἰσθήσεων. cf. *Epicurus Ep.Hdt.* at D.L. 10.37–38. **Chrysippus** Περὶ παθῶν θεραπευτικὸς and Περὶ τοῦ λόγου ap. Gal. *PHP* 5.3.1–2 (*SVF* 2.841) 'ἔστι δὲ γε τῆς ψυχῆς μέρη δι' ὧν ὁ ἐν αὐτῇ λόγος συνέστηκεν'· ἀναμνησκῶν ἴσως ἡμᾶς τῶν ἐν τοῖς Περὶ τοῦ λόγου γεγραμμένων ὧν σὺ διήλθες, ὥς ἐστιν ἐννοιῶν τέ τινων καὶ προλήψεων ἄθροισμα. (2) ἀλλ' εἴπερ ἐκάστην τῶν ἐννοιῶν καὶ προλήψεων εἶναι μόνιον νομίζεις τῆς ψυχῆς, ἁμαρτάνεις διττά. Περὶ τοῦ λόγου Book 1 at D.L. *V.P.* 7.54 ὁ δὲ Χρύσιππος (*SVF* 2.105) διαφερόμενος πρὸς αὐτόν ἐν τῷ πρώτῳ Περὶ λόγου κριτήριά φησιν εἶναι αἴσθησιν καὶ πρόληψιν. **Philo of Alexandria** *Deus* 42–43 (*SVF* 2.458) see below, ch. 4.12 section E(a)§1. **Plutarch** *Soll.An.* 962C λόγος μὲν γὰρ ἐγγίγνεται φύσει, σπουδαῖος δὲ λόγος καὶ τέλειος ἐξ ἐπιμελείας καὶ διδασκαλίας (quoted *Porphyry Abst.* 3.23). **Sextus Empiricus** *M.* 7.373 (*SVF* 1.64, 2.56) μνήμη θησαυρισμὸς οὐσα φαντασιῶν. *M.* 8.203 ἔτι πᾶν αἰσθητὸν ὥς αἰσθητὸν ἀδιδάκτον ἐστίν. οὕτε γὰρ τὸ λευκὸν χρῶμα διδάσκεται τις ὁρᾶν οὕτε τοῦ γλυκέος μανθάνει γεύεσθαι, οὐ θερμὸν ἀντιλαμβάνεσθαι, οὐκ ἄλλου τινὸς τοιούτου· ἀλλ' ἐκ φύσεως καὶ ἀδιδάκτως πάντων αὐτῶν ἀρεστίη ἡμῖν ἢ γνώσις. τὸ δὲ σημεῖον ὥς σημεῖον μετὰ πολλῶν, ὥς φασι, μόχθων διδάσκεται. **Cicero** *Luc.* 30 *mens enim ipsa, quae sensuum fons est atque etiam ipsa sensus est, naturalem vim habet, quam intendit ad ea quibus movetur. itaque alia visa sic arripit ut iis statim utatur, alia quasi recondit, e quibus memoria oritur; cetera autem similitudinibus construit, ex quibus efficiuntur notitiae rerum, quas Graeci tum ἐννοίας tum προλήμψεις vocant.* *Fin.* 3.33 (*SVF* 3.72) *cumque rerum notiones in animis fiant, si aut usu aliquid cognitum sit aut coniunctione aut similitudine aut collatione rationis ND 1.44 cum enim non instituto aliquo aut more aut lege sit opinio constituta maneatque ad unum omnium firma consensus, intellegi necesse est esse deos, quoniam insitas eorum vel potius innatas cognitiones habemus; de quo autem omnium natura consentit, id verum esse necesse est; esse igitur deos confitendum est. quod quoniam fere constat inter omnis non philosophos solum sed etiam indoctos, fatemur constare illud etiam, hanc nos habere sive anticipationem, ut ante dixi, sive praenotionem deorum (sunt enim rebus novis nova ponenda nomina, ut Epicurus ipse (fr. 255 Usener) πρόληψιν appellavit, quam antea nemo eo verbo nominarat).* **ps.Plato** *Def.* 414c αἴσθησις ... ψυχῆς διὰ σώματος εἰσαγγέλσις εἰς ὥρας ἀνθρώπων, ἀφ' ἧς γίνεται ψυχῆς ἄλογος δύναμις γνωριστικὴ διὰ σώματος. **Alcinous** *Did.* c. 4, p. 154.34–40 H. ἡ μὲν οὖν αἴσθησις ἐστὶ πάθος ψυχῆς διὰ σώματος ἀπαγγελτικὸν προηγουμένως τῆς πεπονθῆαις δυνάμεως· ὁπότεν δὲ ἐν τῇ ψυχῇ διὰ τῶν αἰσθητηρίων κατὰ

τὴν αἴσθησιν τύπος ἐγγένηται, ὅπερ ἐστὶν αἴσθησις, ἔπειτα οὗτος μὴ διὰ χρόνου πλήθος ἐξίτηλος γένηται, ἀλλ' ἔμμονος καὶ σωζόμενος, ἡ τοῦτου σωτηρία μνήμη καλεῖται. **Alexander of Aphrodisias** *de An.* 68.4–12 δεῖ νοεῖν γίνεσθαι ἐν ἡμῖν ἀπὸ τῶν ἐνεργειῶν τῶν περὶ τὰ αἰσθητὰ οἶον τύπον τινὰ καὶ ἀναζωγράφημα ἐν τῷ πρώτῳ αἰσθητηρίῳ (τοῦτο δ' ἐστὶ τὸ σῶμα, ἐν ᾧ ἡ αἰσθητικὴ τῆς ψυχῆς δυνάμις ἐστὶ), ἐγκατάλειμμά τι ὃν τῆς ὑπὸ τοῦ αἰσθητοῦ γινομένης κινήσεως, ὃ καὶ μηκέτι τοῦ αἰσθητοῦ παρόντος ὑπομένει τε καὶ σώζεται, ὃν ὥσπερ εἰκῶν τις αὐτοῦ, ὃ καὶ τῆς μνήμης ἡμῖν σωζόμενον αἴτιον γίνεται. τὸ τοιοῦτον ἐγκατάλειμμα καὶ τὸν τοιοῦτον ὥσπερ τύπον φαντασίαν καλοῦσιν. (from here = *SVF* 2.59) διὸ καὶ ὀρίζονται τὴν φαντασίαν τύπωσιν ἐν ψυχῇ καὶ τύπωσιν ἐν ἡγεμονικῷ. **Sextus Empiricus** *M.* 7.241 (*SVF* 2.64) ἡ φαντασία γίνεται ἥτοι τῶν ἐκτὸς ἢ τῶν ἐν ἡμῖν παθῶν. **Ptolemy** *Iudic.* c. 12, pp. 17.17–18.12 τὰ μὲν οὖν ἀπολελυμένα καὶ πρῶτα κριτήρια χωρὶς λόγου τινὸς αὐτόθεν ἐστὶ καταληπτικά καὶ μὴ δεόμενα κατὰ γε τὴν ἐνάργειαν αὐτὴν ἐτέρας ἀρχῆς· ἀντιλαμβάνεται γὰρ πρῶτον μὲν αὐτῶν καὶ τῶν ἰδίων κινήσεων κατὰ τὴν ἐντὸς συναίσθησιν· ἔπειτα ἤδη τῶν πρώτων αἰσθητηρίων, καὶ τῶν ὅσα τῶν ἔξωθεν στερέμνια καὶ μετέχοντα τῶν εἰδῶν, καὶ κατὰ τὴν διατεινομένην ἀπὸ τῶν αἰσθητῶν μνήμην ἤδη τῶν εἰδῶν αὐτῶν ὡς κεχωρισμένων τινῶν καὶ ἀπηλλαγμένων τῆς τῶν καθ' ἑκάστον ὑποστάσεως· ἀφ' ὧν αἱ παραποιήσεις καὶ μεταβάσεις ἐπὶ τὰ τῶν μηδ' ὅλως δι' αἰσθήσεων νεονημένων εἰδῶλα καὶ φαντάσματα διατείνονται μεθ' ἡμέραν τε καὶ νύκτωρ· αἱ μὲν ἀπὸ τινος ὁμοιότητος καὶ ἀναλογίας, ὡς αἱ τῶν δαιμονίων μορφῶν (for παραποιήσεις ... μορφῶν see below, ch. 4.12, section E(b)§1[20–28]), αἱ δὲ ἀπὸ συνθέσεως, ὡς αἱ τῶν γιγάντων ἢ τῶν καλουμένων νάνων καὶ εἴ τι παραπλήσιον τούτοις δὲ τοῖς ἀπλοῖς καὶ ἀσυλλογίστοις κριτηρίοις ἐπισυναφθεῖς ὁ τῆς διανοίας ἐνδιάθετος λόγος κατὰ μὲν τὴν ἀπολελυμένην ἐπιβολὴν καὶ αὐτὸς ἔτι δοξάζει μόνον κτλ.

Chapter heading: Sextus Empiricus *P.* 1.65 ἴδωμεν οὖν πρότερον περὶ τοῦ ἐνδιαθέτου.

§1[3–9] **Stoics: Plato** *Phlb.* 34a σωτηρίαν τοίνυν αἰσθήσεως τὴν μνήμην λέγων ὀρθῶς ἂν τις λέγοι κατὰ γε τὴν ἐμὴν δόξαν. **Alexander of Aphrodisias** *de An.* 83.2–11 γεννᾶται γὰρ ὁ ἄνθρωπος αἰσθήσεις ἔχων, καθ' ἃς ἐνεργῶν φαντασίας λαμβάνει. ὁρῶν οὖν ἐκάστοτε καὶ ἀκούων καὶ κατὰ τὰς ἄλλας αἰσθήσεις αἰσθανόμενος καὶ τυπούμενος ὑπ' αὐτῶν πρῶτον μὲν ἐν τῇ τῶν τύπων τούτων τηρήσει μνημονεύειν ἐθίζεται, ἔπειτα δὲ ἔκ τε μνήμης καὶ τῆς συνεχοῦς κατὰ τὰς αἰσθήσεις ἐνεργείας περὶ τὰ αἰσθητὰ γίνεται τις αὐτῷ ἀπὸ τοῦ 'τόδε τε καὶ κατέκαστον' ἐπὶ τὸ 'τοιόνδε καὶ καθόλου' μετάβασις δι' ἐμπειρίας. τοῦδε γὰρ τοῦ λευκοῦ καὶ τοῦδε τῆς αἰσθήσεως ἀντιλαμβανομένης ἐκ τῶν τοιούτων ἀντιλήψεων ἔλαβεν τὸ εἶναι τὸ τοιόνδε χρῶμα λευκόν. ὁμοίως δὲ καὶ ἐπὶ τῶν ἄλλων αἰσθητῶν ἐκάστου. **Ptolemy** *Iudic.* c. 3, p. 6.18–19 ἡ δ' ἔννοια (sc.ἔοικε) τῇ μνήμῃ καὶ ἀναγραφῇ τῶν ῥηθέντων. *Iudic.* c. 2, p. 5.18–22 τῆς τε γὰρ αἰσθητικῆς δυνάμεως αἰσθητήρια μὲν ἐστὶ τὰ τοῦ σώματος ὅργανα δι' ὧν ἅπτεται τῶν αἰσθητῶν· φαντασία δ' ἡ τύπωσις καὶ διάδοσις ἡ ἐπὶ τὸν νοῦν, οὗ τὴν κατοχὴν καὶ μνήμην τῶν διαδοθέντων καλοῦμεν ἔννοιαν. **Galen** *Inst.Log.* c. 3, p. 7.22–8.3 ἐπεὶ δὲ τῶν αἰσθητῶν πραγμάτων ἔχομεν μνήμας, ὅταν μὲν (κατὰ) κινήσεις ταύτας ποιησώμεθα καθάπερ εἰ τύχοι Ἀθηναίων, ὀνομαζέσθω τοῦτο ἡμῖν νόησις, ὅταν δὲ ἡσυχάζουσαι τύχωσιν, ἔννοιαι.

§1[4] **Stoics: Plato** *Tht.* 191c–d (Σω.) θές δή μοι λόγου ἔνεκα ἐν ταῖς ψυχαῖς ἡμῶν ἐνὸν κήρινον ἐκμαγεῖον, τῷ μὲν μείζον, τῷ δ' ἔλαττον, καὶ τῷ μὲν καθαρωτέρου κηροῦ, τῷ δὲ κοπρωδεστέρου, καὶ σκλη(d)ροτέρου, ἐνίοις δὲ ὑγροτέρου, ἔστι δ' οἷς μετρίως ἔχοντος. (Θεαι.) Τίθημι. (Σω.) δῶρον τοῖνυν αὐτὸ φῶμεν εἶναι τῆς τῶν Μουσῶν μητρὸς Μνημοσύνης, καὶ εἰς τοῦτο ὅτι ἂν βουλευθῶμεν μνημονεῦσαι ὧν ἂν ἴδωμεν ἢ ἀκούσωμεν ἢ αὐτοὶ ἐννοήσωμεν, ὑπέχοντας αὐτὸ ταῖς αἰσθήσεσι καὶ ἐννοίαις, ἀποτυποῦσθαι, ὥσπερ δακτυλίων σημεῖα ἐνσημαινομένους. **Aristotle** *de An.* 3.4 430b30–a2 δυνάμει πῶς ἐστὶ τὰ νοητὰ ὁ νοῦς, ἀλλ' ἐντελεχεῖα οὐδέν, πρὶν ἂν νοῇ· δυνάμει δ' οὕτως ὥσπερ ἐν γραμματεῖῳ ᾧ μηθὲν ἐνυπάρχει ἐντελεχεῖα γεγραμμένον· ὅπερ συμβαίνει ἐπὶ τοῦ νοῦ. **Alexander of Aphrodisias** *de An.* 84.24–27 ἐπιτηδεϊότης τις ἄρα μόνον ἐστὶν ὁ ὑλικὸς νοῦς πρὸς τὴν τῶν εἰδῶν ὑποδοχὴν εἰκῶς πινακίδι ἀγράφῳ, μᾶλλον δὲ τῷ τῆς πινακίδος ἀγράφῳ, ἀλλ' οὐ τῇ πινακίδι αὐτῇ. αὐτὸ γὰρ τὸ γραμματεῖον ἦδη τι τῶν ὄντων ἐστίν. **Diogenes Laertius** *V.P.* 6.3 (on Antisthenes, F 171 Prince) πρὸς τε τὸ Ποντικὸν μεῖράκιον μέλλον φοιτᾶν αὐτῷ καὶ πυθόμενον τίνων αὐτῷ δεῖ, φησί, 'βιβλαρίου καινοῦ καὶ γραφείου καινοῦ καὶ πινακίδου καινοῦ', τὸν νοῦν παρεμφαίνων.

§1[6–15] **Stoics: Augustine** *C.D.* 8.7 Dombart–Kalb *ipsi Stoici* (SVF 2.106), *qui cum vehementer amaverint sollertiam disputandi, quam dialecticam nominant, a corporis sensibus eam ducendam putarunt, hinc asseverantes animum concipere notiones, quas appellant ἐννοίας, earum rerum scilicet quas definiendo explicant; hinc propagari atque conecti totam discendi docendique rationem.* Cf. on language **Origen** *CC* 1.24 ὡς νομίζουσιν οἱ ἀπὸ τῆς Στοᾶς (SVF 2.146), φύσει (sc. εἰσι τὰ ὀνόματα), μιμουμένων τῶν πρώτων φωνῶν τὰ πράγματα, καθ' ὧν τὰ ὀνόματα, and **Augustine** *de Dial.* c. 6.10.9–16 *haec quasi cunabula verborum esse crediderunt* (sc. Stoici, *FDS* 644), *ubi sensus rerum cum sonorum sensu concordarent, hinc ad ipsarum inter se rerum similitudinem processisse licentiam nominandi; ut cum verbi causa crux propterea dicta sit, quod ipsius verbi asperitas cum doloris quem crux efficit asperitate concordat, crura tamen non propter asperitatem doloris sed, quod longitudine atque durtie inter membra cetera sint ligno (crucis) similia, sic appellata sint* (etc.).

§1[6–9] **Stoics: Plato** *Phd.* 96b ἡ τούτων μὲν οὐδέν, ὁ δ' ἐγκέφαλός ἐστιν ὁ τὰς αἰσθήσεις παρέχων τοῦ ἀκούειν καὶ ὁρᾶν καὶ ὁσφραίνεσθαι (Alcmaeon 24A1 DK), ἐκ τούτων δὲ γίγνεται μνήμη καὶ δόξα, ἐκ δὲ μνήμης καὶ δόξης λαβούσης τὸ ἡρεμεῖν, κατὰ ταῦτα γίνεσθαι ἐπιστήμην; **Aristotle** *Int.* 1 16a3–4 ἔστι μὲν οὖν τὰ ἐν τῇ φωνῇ τῶν ἐν τῇ ψυχῇ παθημάτων (i.e. images, thoughts?) σύμβολα. *APo.* 2.19 99b36–100a8 ἐνούσης δ' αἰσθήσεως τοῖς μὲν τῶν ζώων ἐγγίγνεται μονὴ τοῦ αἰσθητάτος, τοῖς δ' οὐκ ἐγγίγνεται. ὅσοις μὲν οὖν μὴ ἐγγίγνεται, ἢ ὅλως ἢ περὶ ἃ μὴ ἐγγίγνεται, οὐκ ἔστι τούτοις γνώσις ἔξω τοῦ αἰσθάνεσθαι· ἐν οἷς δ' ἔνεστιν αἰσθητένοις ἔχειν ἔτι ἐν τῇ ψυχῇ. πολλῶν δὲ τοιούτων γινομένων ἡδὴ διαφορὰ τις γίνεται, ὥστε τοῖς μὲν γίνεσθαι λόγον ἐκ τῆς τῶν τοιούτων μονῆς, τοῖς δὲ μή. ἐκ μὲν οὖν αἰσθήσεως γίνεται μνήμη, ὥσπερ λέγομεν, ἐκ δὲ μνήμης πολλὰκις τοῦ αὐτοῦ γινομένης ἐμπειρία· αἱ γὰρ πολλὰ μνήμαι τῷ ἀριθμῷ ἐμπειρία μία ἐστίν. ἐκ δ' ἐμπειρίας ἢ ἐκ παντὸς ἡρεμήσαντος τοῦ καθόλου ἐν τῇ ψυχῇ, τοῦ ἐνὸς παρὰ τὰ πολλὰ, ὁ ἂν ἐν ἅπασιν ἐν ἐνῇ ἐκείνοις τὸ αὐτό, τέχνης ἀρχὴ καὶ ἐπιστήμη. *Mem.* 1 449b24–

24 ἔστι μὲν οὖν ἡ μνήμη οὔτε αἰσθησις οὔτε ὑπόληψις, ἀλλὰ τούτων τινὸς ἕξις ἢ πάθος, ὅταν γένηται χρόνος. *Met.* A.1 980a28–981a16 γίγνεται δ' ἐκ τῆς μνήμης ἐμπειρία τοῖς ἀνθρώποις· αἱ γὰρ πολλαὶ μνήμαι τοῦ αὐτοῦ πράγματος μιάς ἐμπειρίας δύναμιν ἀποτελοῦσιν. ... (a15) ἡ μὲν ἐμπειρία τῶν καθ' ἕκαστόν ἐστι γνώσις, ἡ δὲ τέχνη τῶν καθόλου. For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The only witnesses are P^B and P^Q, largely confirmed by G who has edited out the poetical quotations near the end. For 4.12 (in contrast to ch. 4.11) it is also witnessed by Nem, who will have derived it from a parallel doxographical tradition (see above, chs. 4.2–3, Commentary A). Only part of the heading is preserved for S in the index of Photius, but this is sufficient to demonstrate that his anthology must originally have contained the chapter. T again did not excerpt it. There is no need to divide this chapter into lemmata, as we are dealing with a single name-label, and a single doctrine just as in the previous chapter.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* A rather free but not inaccurate version of what is in A 4.12 is found at Nem NH c. 6 p. 55.14–56.2, cited above at *testes secundi* (the second parallel in the apparatus of *DG*); see e.g. Jaeger (1914) 7–12. This is preceded by a brief paragraph, p. 55.9–13, also cited above at *testes secundi*, which Diels *DG ad loc.* also derives from A, but this is not entirely certain. At *DG* 61 he argues that the Nemesian parallels are excerpts from A and so prove that what is in P also derives from A. But in the case of Nem p. 55.9–13 there are interesting differences. This briefly deals with the four terms at issue in a different order, viz. φανταστικόν φανταστόν φαντασία φάντασμα: ‘fancy’ and its object occur, respectively, before and after impression and its object. Here the φανταστικόν is a faculty of the *irrational* soul, the φανταστόν the object of the φαντασία, the φαντασία an affection of the *irrational* soul brought about by a φανταστόν, and the φάντασμα a groundless movement in the *irrational* parts of the soul that in no way derives from a φανταστόν. This looks like a dualist rewriting of Stoic psychical monism. Also note that Nem has the bland name-label ‘the Stoics’ (p. 55.13), whereas ch. 4.12 has ‘Chrysippus’; but this is not decisive, since such differences in designation also exist between P and S, see e.g. P at A 1.6[1] ‘the Stoics’ and S at A 1.7.10[73] ‘Posidonius’ for the same doxa, or P at 1.18.5 ‘the Stoics’, while S here reads ‘Zeno and his followers’. We note that Nem tones down the difference between these two accounts by stating that the ‘diaphonia’ (his term) is not more than a ‘terminological variation’, ἐναλλαγήν ... τῶν ὀνομάτων.

(2) *Sources.* Provenance from a Stoic source, as Diels *DG* 61 already surmised, is virtually certain because, with the exception of the introductory phrase (‘Chrysippus says that these four are different from one another’), ch. 4.12, just as ch. 4.11, is in *oratio recta*. See also at ch. 4.11 above, Commentary D(a). The first persons plural §1[5] ‘we observe’ (θεωρῶμέν), §1[7] ‘we are able’ (ἔχομεν)

and §1[18] ‘we are attracted’ (ἐλκόμεθα), and the personal pronoun §1[7] ‘us’ (ἡμᾶς) are significant, just as the verb forms and pronoun in ch. 4.11 (where see Commentary B): ‘we’ and ‘us’, that is, ‘we humans’, as in staunch Stoic theory. The quotations from Euripidean tragedy and the reference to the seer in Homer point to quotation-happy Chrysippus as well. As intermediary source we may posit a Stoic handbook, or one providing Stoic doctrine, just as in the case of chs. 4.11, 4.15 and 4.21. Nem *NH* c. 12 contains a parallel to A 4.21.1, and begins with a backward glance at *NH* c. 6.

C Chapter Heading

The long and precise heading is only found in P^B, but as to content (though as we have seen the four items are listed in a different order the first time) also in the cousin writing of Nem. For the dialectical aspect of the question word see above, ch. 1.1, Commentary C, and for the parallel phrase τίνι διαφέρει ch. 1.2: the difference is between distinct species. P^Q only has the first two items. P^G has a very short heading, Περὶ φαντασιῶν, of the umbrella type περὶ τοῦ δεῖναι that dominates in the *Placita*; ‘fortasse rectius’ according to Diels *DG* 401 ad loc., who fails to take into account that P^G lists the four items immediately after the phrase ‘those four’ (τέτταρα ταῦτα) he has taken from P^B. S^{Phot} has combined an umbrella part of a heading, viz. Περὶ φαντασίας with another part, namely καὶ κριτηρίου (Περὶ κριτηρίου is first attested as a book title for Epicurus at Diogenes Laertius *V.P.* 10.27 and Posidonius at *V.P.* 7.54, as a chapter heading Sextus Empiricus *M.* 7.29). For this latter part there is no parallel in P. The combined evidence in P^B, in P^Q, in the text not the heading of P^G, and in the text of Nem is in favour attributing the long heading to A. Decisive is the fact that the first phrase of the first lemma in P (also cited in Nem, who as heading only has Περὶ τοῦ φανταστικοῦ) refers to the *four* concepts in the title.

D Analysis

a Context

Ch. 4.12 is the second of two chapters dealing with aspects of exclusively *Stoic* views on concept formation, sensation, and thought, so not with those of other philosophers or schools. These chapters have been inserted in the original *Placita* to upgrade the epistemological section.

b Number–Order of Lemmata

There is no multiplicity of *Placita* lemmata in the usual sense of the word. It is in fact a monolemmatic chapter, just as the previous one. The division in paragraphs introduced by us merely mirrors the progress of the argument.

c Rationale–Structure of Chapter

In the absence of a plurality of views the chapter, like ch. 4.11, has no diaeretic and/or diaphonic structure. The account distinguishes and defines four etymologically and semantically related terms pertaining to sensation, imagination, and concept formation. The definitions concerned are complete and sectarian definitions (as opposed to nominal or conceptual definitions, see above, ch. 1.9, at Commentary D(d), General points), here paradoxically concerned with the specific individuality of general concepts.

d Further Comments

General Points

Most of the notions as defined here are consistent with those of ch. 4.11.

Individual Points

§1[7] ‘enables us to say’: we, as adults, are able to formulate a meaningful sentence, a proposition, corresponding to precisely this *phantasia*. As Diogenes Laertius *V.P.* 7.49 (*SVF* 2.52) tells us: ‘the impression (*φαντασία*) comes first, and then the mind, unable to keep silent, brings out in speech what it experiences by the agency of the *phantasia*’.

§1[7–8] ‘And similarly when we are affected through touch and smell’; that is, the presentations of touch and smell reveal both themselves and their contents. Hearing and taste are not mentioned, though without doubt they could have been; they may have been abridged away by P. For their presence compare the largely parallel passage Sextus Empiricus *M.* 7.162 (*SVF* 2.63) cited section E(b)§1[9–11], on the modification in the soul caused by the impression: ‘we become aware of two things, one being the alteration itself, i.e. (aware) of the impression, the second of what brings this modification about internally, i.e. the visible object; *and with regard to the other senses (this happens) in virtually the same way*. Just as light reveals itself and all the things it contains, so also the impression, being the originator of the knowledge present in the living being, is bound (both) to reveal itself in the manner of light and to become indicative of the evident object that produced it’ (tr. Bury LCL, modified).

P’s account is worthwhile also from another point of view. It is generally accepted that according to a standard Stoic view only bodies are capable of *ποιεῖν* as well as *πάσχειν*, and that the effect of a(n active) body qua cause upon and in another body (a passive one) is an ‘incorporeal’; see AD fr. 18 Diels (*SVF* 1.89, 2.336, Posid. F 95 E.–K) and the other texts cited above at ch. 1.11 section E(a)§5. But according to Chrysippus as cited in the present chapter, an object that is perceived produces, that is, *causes*, an impression (*phantasia*): an ‘affection (*πάθος*—think of *πάσχειν* as the opposite of *ποιεῖν*) that has come about

in the soul through seeing', 'and it is (in correspondence with) this affection that we are able to *say* (εἰπεῖν) that there exists a white object that moves us'. A body, say a white knife, causes the impression of a white knife in the soul. This impression is not an incorporeal effect, for it is an 'imprinting, τύπωσις, in the soul' (see the texts cited below, section E(b) §1[3–6] and the echo at ch. 4.8.11 above). Thus it would seem, *pace* the generally accepted view, that the Stoic theory of causation also allows for corporeal changes as effects of other bodies operating as causes. But this is a matter we cannot go into further here.

§1[9–11] The derivation of φαντασία from φῶς/φῶς is already found in Aristotle, then in AD and Alexander of Aphrodisias; see section E(a)&(b) §1[9–11], and immediately above for a translation of the passage in Sextus Empiricus. For Q's explanation with reference to the *Sprache der Griechen* (app. crit.) cf. chs. 1.8 (heading), 2.1.1[2], 3.7.2[6], 4.11.1[17], and 4.19.3[7]. There is no etymological link in Arabic, so his public needs an explanation.

§1[15–16] καθάπερ ἐπὶ τοῦ σκιαμαχοῦντος καὶ κενοῖς ἐπιφέροντος τὰς χεῖρας: cf. Seneca *Nat.* 7.14.1, *solvere ista quid aliud est quam manum exercere et in ventum iactare brac(c)hia?* Vottero (1989) and Parroni (2002) ad loc. refer to similar expressions in Greek and Latin at Otto (1890) nr. 28. 'Seneca si riferisce all'allenamento dei pugili' (Vottero, loc. cit., who also cites the apostle Paul 1 Cor. 9:26, ἐγὼ ... οὕτως πυκτεύω ὥς οὐκ ἄερα δέρων). Cf. John Chrysostom, *Ad pop. Antioch.*, MPG 49 p. 47.18–20, καὶ καθάπερ ὁ σκιᾶ πυκτεύων καὶ τὸν ἄερα δέρων οὐδένα πληῆσαι δυνήσεται, οὕτως ὁ τῷ δικαίῳ πολεμῶν σκιαμαχεῖ μόνον.

§1[18–19] The definition and meaning here of 'phantasm', φάντασμα, are squarely opposed to the meaning of this term in A 4.11[16]: 'apparition', 'mental image' in the earlier chapter over against 'figment', the usual meaning in Stoic language, in the present one. This contrast, which may be due to the doxographer rather than to his source, may have favoured the inclusion of this material in the doxography, since it chimes in with the familiar Aëtian predilection for diaeresis and diaphonia, this time not found in a single chapter but stretched to encompass two. See also Commentary D(a) at ch. 4.11 above.

§1[20–28] Such quotations of Euripides and Homer are typically Chrysippean, e.g. Diogenes Laertius *V.P.* 7.180 (*SVF* 2.1), the bon mot on Chrysippus' *Medea*; in general Galen *PHP* 2.2.5 (*SVF* 2.883), *PHP* 3.5.21–22 (*SVF* 2.884); see Tieleman (1996) 220–248. The quoted lines of the *Orestes* are also found in passages in Sextus Empiricus (see *testes II*) where the various kinds of *phantasia* are discussed, thus confirming the solid Stoic background of our present chapter. For the misguided attempt of Prof. Schubert to claim Plutarch of Chaeronea as author see Mansfeld (2018a) at M–R 4.195.

e Other Evidence

A full parallel for the distinction between the four concepts of the heading is found in Nem, see at *testes secundi* and our discussion above in section B. The brief parallel for delusions in Ptolemy *Iudic.* c. 12.3, p. 18.3–8 is interesting also for its position in a general account that for the most part is paralleled in ch. 4.11. This also holds for the Epicurean account at Diogenes Laertius *V.P.* 10.32–33 for which see above, ch. 4.11 Commentary D(e), and for Sextus Empiricus, who, in one of his accounts of (Stoic) concept formation (*M.* 8.56–60) cites a line from Euripides' *Orestes* also found among A's more generous quotations.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

(1) There are two witnesses, P, represented in various ways by P^B, P^G and P^Q, and S, i.e. as preserved in S^L, the Florentine florilegium (for the contribution of S^L see ch. 4.8 above at Commentary A(1)). P has five lemmata, S thirteen. The tradition is less good than one would wish. P has not only abridged the chapter rather drastically, but also coalesced two different lemmata to create a new Empedocles lemma that has fooled some scholars, but not Diels *DG* 64. And G added further reductions of his own (although the mistaken coalescence of P₂ & P₃ involving the disappearance of the name-label Hipparchus may have occurred in the textual transmission rather than been perpetrated by the epitomator). Furthermore an accident occurred in the transmission of P between the periods of P^G and P^Q. In G's copy of P the second lemma of A (name-label Academics in S, §10) had not yet lost this label and therefore not yet become amalgamated with the first lemma. This is proved because G does in fact have a name-label replacing 'some Academics' for this lemma, viz. 'others'. The resulting amalgamation of the two parts of the first lemma was achieved by restoring the text of pre-Byzantine P in an abusive way through the interpolation of a καί, 'and'. This was compounded by the replacement of ἐκχυσιν with εἰσκρισιν. (The result is still awkward as ὑποστρεφουσῶν, 'turning back', entails that the rays first travelled in the opposite direction). Diels did realize this (cf. his comments in the *Prolegomena* p. 55), but did not realize that their origin in S^L occurred through contamination from P^B (see his later comments in 1881, 349). In his text in *DG* he still retained the additional lines in both columns of his text, but they were rightly bracketed by Wachsmuth; cf. also Haas (1907) 362–363 n. 55. Mau and Lachenaud, who edit P, of course retain the lines in their text of P^B. Psellus refers to the Plato lemma (§7) though not correctly. Symeon Seth characterizes the discussion on the issue in general terms.

(2) Of A ch. 4.13 as found in S's ch. 1.52, the direct tradition has only preserved the paragraphs concerned with Aristotle (§9) and Plato (§7); see M–R 1.202–203 and also the analysis at 1.228–231. What appears to be the complete ch. 4.13 is extant, together with its companion ch. 4.14, in S^L. Apart from this material S 1.52 as reconstructed contains AD fr. 17 Diels (the first sentence of which (our §9), however, should be attributed to A, see at section D(b) below), two rather long passages from the *Timaeus*, and a passage from the pseudo-Pythagorean Aristombrotos. Via the florilegium rather more lemmata have been preserved

in S than in P, but unfortunately contamination has occurred, since as noted above the first lemma in S^L has been amplified with the additional material from P^B.

B Proximate Tradition and Sources

(1) *Proximate tradition.* Parallel accounts are found in Galen, Calcidius, Numenius, and esp. Alexander of Aphrodisias(?)'s *De anima mantissa*, but in these more or even a good deal more attention is given to the theories of Aristotle and the Stoics. For the series of parallels in the *Mantissa* see Sharples (1998a) 394–397. Galen *PHP* 7.7.22.4–23.2, πολὺ γε τούτου (sc. Epicurus) κρείττων Ἀριστοτέλης, οὐκ εἶδωλον σωματικὸν ἀλλὰ ποιότητα δι' ἀλλοιώσεως τοῦ πέριξ ἀέρος ἀπὸ τῶν ὁρατῶν ἄγων ἄχρι τῆς ὀψεως (p. 474.15–17 De Lacy) refers to Aristotle's view in his account of vision, viz. after his references to the Stoics and Epicurus, the latter *ad sententiam* corresponding to ch. 4.13.1. The 'cousin writing' of Nem *NH* c. 7, p. 58.9–11, copying Galen for the Epicureans and Aristotle almost verbatim but also indebted to the doxographical lemmata of which he modifies the sequence, lists Aristotle's doctrine between that of the Epicureans and (Galen plus) Plato (the latter virtually identical with ch. 4.13.7, then followed by abstracts from Galen's discussion of Plato's theory of vision at *PHP* 7.5 and 7.7).

The connection between a treatment of vision and one of mirror images (as between the present chapter and the next) is mentioned at Alcinous *Did.* c. 18 p. 173.32–34 H. It is also a feature of the lists of issues shared with the mathematicians that constitute a subpart of the Stoic *physikos logos* at Diogenes Laertius *VP.* 7.133. Lucretius' extensive account of vision at *DRN* 4.26–468 includes one of mirrors and mirror images at 4.269–323. So does Galen's account of vision at *PHP* 7.7. The first of the ten Skeptical Modes in Sextus Empiricus discusses the oddities of visual perception in general first and those of mirrors next, *P.* 1.44–49. Calcidius in *Tim.* cc. 236–248, chapter *de visu*, and cc. 257–259, in the chapter *de imaginibus*, discusses in succession as well as together various views on vision and reflection in mirrors, some among which are parallel to tenets found in chs. 4.13–14. Geminus' account of mathematics cited by Proclus in *Eucl.* p. 40.9–22, and Heron *Def.* c. 125.12, list optics, catoptrics and 'scenography' as related sub-disciplines, quoted on ch. 3.5 section E(b)§4 (for 'scenography' see also Geminus(?), *Fr.Opt.* p. 28.10–30.11 Schöne = Heron *Def.* 135.13, τί τὸ σκηνογραφικόν κτλ., and Clement of Alexandria *Strom.* 656.1, cited below, ch. 4.14, section E(a) General texts). Ptolemy's and the great Arabic scientist ibn al-Haytham's (Alhacen's) *Optics* deal with in succession optics (direct vision), catoptrics (reflection, ἀνάκλασις, vision via mirrors) and dioptrics (refracted vision, as of a coin in water), cf. above, ch. 3.5, Commentary D(d)§3,

and below, section D(a). For the *Optics* ascribed to Ptolemy, the Greek original of which most probably is to be dated to the sixth cent. CE or even later, see the detailed exposition of Siebert (2014a). For further details on chs. 4.13–14 see M–R 2.1.146, 2.2.182–191.

(2) *Sources*. The connection between a treatment of vision and one of mirror images is traditional and at least as early as Plato, see *Tim.* 45b–46c. There is an incidental reference to reflection near the end of Aristotle's *De anima*, at 3.12 435a5–10, where however he does not mention mirror images but contrasts two views of the visual process (cf. below, ch. 4.14, Commentary D(c)). The main diaphonia (as almost explicitly expressed in §12) is formulated in Aristotle *Sens.* 2 437b23–438a5. Several individual lemmata go back to Aristotle, and we also discern the influence of Theophrastus' *De sensibus*; both had access to original Presocratic sources. Baltussen (1993) 219 points out that Theophrastus' treatment of Alcmaeon is far more elaborate than that of Aristotle and Aëtius. Agreeing with Diels he also states that all occurrences of Alcmaeon in Aëtius (sc. in Book 4) have their counterpart in the *De sensibus*. This is mostly correct for Book 4 (for A 4.2.2 as from Aristotle see above, ch. 4.2 at Commentary D(d)§2). In their Alcmaeon chapter Laks–Most (2016e), frs. D11–D19, conveniently couple the evidence on the senses from Theophrastus with the Aëtian lemmata.

We also note the presence of Hellenistic data, and more especially of name-labels from the domain of the sciences: Aristarchus and Hipparchus (compare other 'scientific' chapters, e.g. chs. 3.17 and 4.1). Interesting are also the presence of Plato's pupil Hestiaeus of Perinthus (cited only once elsewhere in the *Placita* at ch. 1.22.4 on the οὐσία of time) and of the renegade Epicurean Tima(sa)goras (found only here in the *Placita*). That the chapter has been updated is also clear from the presence of Posidonius at §11.

C Chapter Heading

The long heading of P^B and P^Q, Περὶ ὁράσεως, πῶς ὁρώμεν, should probably be attributed to A. It combines the umbrella type with a further specification referring to the question type of cause. For the umbrella type and the dialectical implication of the question word πῶς see above, ch. 1.3, commentary C. P^G abridges to Περὶ τοῦ πῶς ὁρώμεν, while the heading of S, extant only in the index of Photius, in the usual way of this source combines two headings, viz. here the abridged heading of the present chapter with the heading of the next. The formula περὶ ὁράσεως may be a successor of the often-found formula περὶ ὀψεως (also περὶ ὀψιως), which serves both as embedded heading, or indication of the theme treated, and as a book-title. For Περὶ ὁράσεως in a title see Plotinus *Enn.* 2.8[35], Περὶ ὁράσεως ἢ πῶς τὰ πόρρω ὁρώμενα μικρὰ φαίνεται (the

first part of the title is not found at Porph. *Plot.* 5 and 24, where the first word is Πῶς). For the embedded heading περί ὄψεως cf. Aristotle *GA* 5.2 781b28–29 καὶ περὶ μὲν ὄψεως καὶ ἀκοῆς καὶ ὁσφρήσεως εἴρηται, Theophrastus *Sens.* 5 Πλάτων ... οὐ μὴν εἰρηκὲ γέ περὶ ἀπασῶν, ἀλλὰ μόνον περὶ ἀκοῆς καὶ ὄψεως, *Sens.* 8, 38, 55, 57, and 86. For its use as a book title cf. Diogenes Laertius *V.P.* 5.49 Theophrastus' treatise Περὶ ὄψεως α' β' γ' δ', *V.P.* 5.59 Strato's Περὶ ὄψεως, and *V.P.* 7.4 Zeno's Περὶ ὄψεως. The extant Hippocratic treatise Περὶ ὄψις, Latin title *De visu*, is a fragment dealing with diseases of the eye ('eye' being one of the meanings of ὄψις), not with vision. S 1.52.21 cites a fragment of the Περὶ ὄψις of the Pseudopythagorean Aristombrotus (the same version is found in the mss. of a late Hippocratic tract, meaning 'On the eyes' rather than 'On vision'). Book 8 of Alexander's teacher Sosigenes' Περὶ ὄψεως is cited at *in Mete.* 143.13–14. Epicurus wrote a Περὶ τοῦ ὁράν (Diogenes Laertius *V.P.* 10.28). This plethora of titles and headings shows how important this topic was believed to be.

The second component of A's heading, πῶς ὁρώμεν, is attested as embedded heading or book-title at Alexander *de An.* 43.16 ὡς δέδεικται ἐν τοῖς Περὶ τοῦ πῶς ὁρώμεν ἐζητημένοις, *in Sens.* 25.25–26 ἔλεγεν (sc. Aristotle) ἐν τοῖς Περὶ ψυχῆς περὶ τοῦ πῶς ὁρώμεν, *in Mete.* 141.11–12 ἐδείχθη ἐν τοῖς Περὶ τοῦ πῶς ὁρώμεν, ὦν καὶ αὐτὸς ἐν τοῖς Περὶ ψυχῆς ἐμνημόνευσε, and Porphyry *Plot.* 5 (chronological catalogue of Plotinus, title of the early treatise *Enn.* 4.7[2]), Περὶ ψυχῆς τρίτον ἢ Περὶ τοῦ πῶς ὁρώμεν. But in the systematic catalogue *Plot.* 25 Porphyry has Περὶ ψυχῆς τρίτον ἢ Περὶ ὄψεως, which illustrates that the formulas Περὶ τοῦ πῶς ὁρώμεν and Περὶ ὄψεως are equivalent. Πῶς ὁρώμεν occurs as the title of an issue in the Stoic list of problems in physics found at Diogenes Laertius *V.P.* 7.133. Clearly A's chapter heading stands in a long and continuing tradition of reflection on this subject; see also below, section D(e).

D Analysis

a Context

The chapter is the first of a cluster of three dealing with vision and two related issues, namely the question of mirror images, ch. 4.14, and the paradoxical issue of the visibility of darkness, ch. 4.15. The connection between a treatment of vision and one of mirror images is traditional and is found at least as early as Plato, see *Tim.* 45b–46c (cf. above, section B(2)). To quote Simon (1988) 18 on the theory of vision in antiquity: 'On ne peut pas ... retracer la théorie de la vision indépendamment de celle des miroirs, bien que très tôt (en langage du temps) l'optique et la catoptrique aient été étudiées dans des traités ou du moins des chapitres indépendants. Le statut qu'on confère à l'image réfléchie ou réfractée dépend de l'idée qu'on se fait de la vision, et réciproquement cette

dernière ne progresse qu'à mesure que s'éclaire la formation de l'image'. See also below, ch. 4.14 Commentary D(a).

In terms of its theme our chapter is also connected with ch. 1.15 'On colours'. The cluster on vision comes after that dealing with sensation and sense objects in general at chs. 4.8–12, and begins the treatment of the individual senses: ch. 4.16 hearing, 4.17 smell, and 4.18 taste (in the same order as Aristotle's in *de An.* 2.7–10). Note that a separate treatment (chapter) concerned with touch is absent, although ch. 4.10.1–2 stipulates that there are five senses according to Stoics and Aristotle and touch is also mentioned elsewhere (ch. 4.8.6, 4.8.7, 4.9.11), and though a chapter *Περὶ ἀφῆς* is found in Nem, and of course an account *περὶ ... τοῦ ἀπτοῦ καὶ περὶ ἀφῆς* was present in Arist. *de An.* 2.11. Vision by means of extramission and optics are also treated in ch. 3.5.3 (cited above, *loci Aetiani*), together with mirror images.

b Number–Order of Lemmata

This chapter is more than usually complicated and our presentation deviates markedly from that of Diels. P has four lemmata in Mau's edition, S thirteen in that of Wachsmuth (if we give back to A an Aristotelian phrase which Diels attributed to AD). Starting with P, we see that two of his four lemmata are combinations of two originally Aëtian lemmata, viz. (1) P1 of A 4.13.1 + 4.13.9, and (2) P2 of A 4.13.12 + 4.13.13. For the history of P1 see also above, at section A.

(1) The present single ps.Plutarchean §1 is a conflation of two lemmata with different name-labels: Atomists vs. Academics, representing the main diaphonia: images vs. rays. The Academics lemma, in A much further down in the chapter, must have been promoted to second position by P in order to present this diaphonia right from the start. But because the name-label of the second lemma had fallen by the wayside at some time between the dates of PG's epitome and PQ's translation they were amalgamated, thus obliterating the diaphonia.

(2) In the case of the doxai of chs. 4.13.12 and 4.13.13, because they are very similar, P in his usual way abridged his predecessor so as to produce a single lemma, in the process weeding out the second name-label, Hestiaeus, and omitting the more complicated Empedoclean doxa, thus saddling the Hestiaeus doxa with the name-label Empedocles; see Diels *DG* 64, and for similar mishaps cf. ch. 1.20 (with Commentary D(b)) as well as ch. 4.7.1–2 (with Commentary A). P then promoted this new lemma to a position immediately after the first two in order to present a compromise embracing the two alternatives (cf. M–R 2.1.9–10, 2.1.46, 2.1.57, 2.1.59, 2.1.141, 2.1.187, 2.1.190; below, section D(c)).

Diels mechanically followed the order of lemmata in P^B, which entailed rejecting that of S. But it is clear that the order of S^L is to be preferred. After

all, it is more than likely, as we noted above in section A, that the chapter in S is complete, i.e. that he simply wrote it out. S₂, listing the dissident Epicurean Timagoras, harmoniously follows upon S₁/P₁ as soon as the interpolated tenet (already shorn of its name-label in P's tradition subsequent to P^G) of S₁₀ is deleted. In the text of the *DG* Diels did not yet bracket this phrase, thus providing an obstacle to the restoration of the original order. Later he argued for deletion in the paper cited below, section D(d)§1; this was accepted by Wachsmuth. Mau (followed by Lachenaud) edited a text of P^B, not of A, so naturally stuck to P's order and reading.

Furthermore, P₂ (name-label Empedocles combined with tenet of Hestiaeus) comes before P₃ (Hipparchus), while on the contrary S₅ (Hipparchus) comes before S₁₂ (Empedocles) plus S₁₃ (Hestiaeus). But as we saw, P's lemma P₂ provides a rewarding contrast to what comes before, which explains why it was reallocated to a position before P₃, the Hipparchus lemma. Thus the tenet of §10 was moved upwards by P to a position immediately after the original first lemma of A, and the new lemma P₂ followed suit. The combination of the name-label Empedocles with the tenet of Hestiaeus in P₂ confirms the order of S₁₂ (Empedocles)—S₁₃ (Hestiaeus) for A, while the relative order of P₃ (Hipparchus) and P₄ (Plato) is the same as that of S₅ and S₇, so also derives from A.

Diels implicitly assumed that an Aëtian lemma with name-label Aristotle had been lost. But S at 1.52.9, p. 484.15–21, i.e. between A 4.13.8 (Alcmaeon) and 4.13.10 (Academics), has a passage describing Aristotle's theory of vision (and hearing). Diels attributed it as fr. 17 to AD: see *DG ad loc.*, and pp. 73–74, but none of his criteria for attribution to AD are valid for this first phrase. In this text vision is concerned with τοῦ διαφανοῦς, just as is the case for Alcmaeon in §8. Of course the replacement of Aëtian lemmata with name-label Plato, or Aristotle, or Stoics, with fragments of Arius Didymus (or quotations from Plato) is a not infrequent occurrence in S, cf. M–R 1.234–235, 1.265–266, 2.1.140, 2.2.369, 3.311 n. 60, 3.378 and Jeremiah (2018) at M–R 4.286, 353. But there are also cases where Aëtian lemmata have been coalesced with excerpts from AD: Diels *DG* 75 n. 2 already thought of the passages printed at chs. 1.7.31, 1.18.6, 1.23.2, 3.1.7, 3.2.3, and 3.7.4. For more such coalesced passages see M–R 1.322–327. We take it that this is also what happened here, and that the first phrase of the passage Diels attributed to AD is to be given back to A. P, then, who so drastically reduced the number of lemmata in this chapter, must have omitted this Aristotle lemma as well.

Lemmata with other Stoic views (i.e. other than Posidonius' at §11), among which that regarding the standard visual cone one would have expected to find here, are only found in ch. 4.15 below.

c Rationale–Structure of Chapter

The main diaphonia is between the penetration of images (or effluences, or forms, or shapes, or qualities) from the external objects into the visual faculty on the one side, and the effluence of visual rays from the eyes towards the objects on the other: intromission (or ingestion) versus extramission. This basic opposition between intentionality and passivity, or receptivity, is reflected in the vocabulary of numerous languages, see e.g. Vendryes (1932) and Christol (2005). For examples in Greek starting from the early poets see Mugler (1964) s.v. ἀκτίς 22–24, ὄψις 290–295, εἶδωλον 117–118, etc. That the sun ‘sees [i.e. illuminates] with its rays’ is found e.g. in Homer, Hesiod and Aeschylus(?) (*Od.* 11.16 Ἡέλιος φάεθων καταδέρκεται ἀκτίνεσσιν, cf. *Theog.* 758–761 with West 1966 ad loc., *h. Cer.* 70, Aeschylus *Pr.* 793–797). The eye is, so to speak, a little sun, the sun an enormous eye, note the abundant material cited by Verdenius (1948) 163–164. See also Aristophanes *Thesm.* 16–17 ‘(Aether) first constructed what we must see with: the eye, closely imitating the sun’s disk’ (ὦ μὲν βλέπειν χρὴ πρῶτ’ ἐμυχανήσατο / ὀφθαλμὸν ἀντίμιμον ἡλίου τροχῷ), also cited Verdenius loc. cit., and by Rashed (2005) 27–28. The Pythagoreans and ‘others’ are said to have called the eyes ‘gates of the sun’, see the *Pythagorean Hypomnemata* of Alexander Polyhistor at Diogenes Laertius *V.P.* 8.29 (ἡλίου πύλας καλεῖ τοὺς ὀφθαλμούς) and Hesychius *Lex.* s.v. H 175 Latte ἡελίοιο πύλας (οἱ δὲ ἀλληγορικῶς τοὺς ὀφθαλμούς).

The view according to which both visual rays and effluences etc. from objects are needed may be seen as avoiding, or outreaching, the diaphonia by having it both ways, as is intimated *disertis verbis* by Theophrastus *Sens.* 5, on Plato’s compromise theory of vision, and Sophonias *in de An.* 75.2–5. This solution may be further refined by introducing a helpful modification of the air (qua unavoidable medium) by means of external fire (i.e. a source of light) between objects and eyes that combines with the fire issuing from the eyes, as in Plato (see below on συναύγεια). Instead of air as the in-between we also encounter a transparent medium that is suddenly filled with light and conveys the visual data, first in Aristotle. The views of Plato and Aristotle have the advantage of explaining why we cannot see in the dark, which both the bare intromission theory and the bare extramission theory fail to do (for the latter see Aristotle’s criticism, *Sens.* 2 437b11–14, in part cited below section E(b)§12, fuller text translated ch. 4.15 Commentary D(d)§1, Greek text *ibid.* section E(b)§2). It should however be noted that the present chapter fails to provide an adequate presentation of the doxai of Plato and Aristotle, a not uncommon deficiency in the *Placita*.

The basic oppositions are presented in terms of blocks. The first block consists of §§1–4, and deals with visual data travelling from the objects to the

visual faculty. The first subdivision of this block, §§1–2, is about images (Leucippus Democritus Epicurus) or effluences (Timagoras) penetrating from outside. §2 is a sort of appendix to §1, providing a revised version of its doctrine (the contrast is exaggerated by A, who emphasizes Timagoras' unorthodoxy because doxography is interested in examples of dissent). The second subdivision, §§3–4, introduces the intermediate air and is about its acquiring the colours travelling from coloured objects (§3, Strato), or the shapes of these objects (§4, Aristarchus). The second block consists of §§5–6 and deals with the visual rays issuing from the eyes that reach out to the objects and send back their grasp of them to the visual faculty. §5 gives the name-label of the astronomer and mathematician Hipparchus, §6 adds Pythagoras qua important mathematician (because of his status!), cf. below, section D(d)§§5–6, and adds Parmenides because of a purported passage in his Poem. Blocks one and two are thus opposed diaphonically.

The third block consists of §§7–11: the doctrine of Plato, encompassing the alternatives of the first two blocks (but note that this Plato implicitly rejects the images), and some variations of this doctrine concerned with an intermediate substance or agent. The co-illumination (συνάυγεια, not a term of Plato) is the product of the cooperation between the light issuing from the eyes, the light travelling from the objects that comes to meet it, and the light of the intermediate air exerting itself in unison with the fiery element of the visual organ (§7). The (too) terse Alcmaeon lemma (§8) can only be properly understood by consulting its antecedent in Theophrastus quoted at section E(b)§8. As formulated here it is made to anticipate Aristotle's doctrine of the transparent in actuality. The view of the Academics of §10, mentioning an effusion of visual rays that return to the organ of vision after their contact with the objects, is less complicated than that of §7. That attributed to Posidonius (§11) is formulated in an even simpler manner, viz. as a combination of light beams, presumably of beams issuing from the eyes with beams travelling from the objects: again a variety of the Platonic doctrine.

The fourth and final block, consisting of §§12–13, comprises two compromise positions. Empedocles (§12) can be read as accepting both visual rays and images, though perhaps his preference is for images. No such preference in the case of Histiaeus (§13), who blends images and visual rays and calls this compound by the name of 'ray-image'.

Within each block there is a clear gradation, a diaeresis of successive tenets that gradually diverge from each other on a gliding scale.

For a preliminary analysis see M–R 2.1.186–188; also cf. Gourinat (2011) 185–186. For the rather different rationale of P's revised chapter see immediately below, section D(d)§1 ad fin.

d Further Comments

General Points

Greek theoretical optics and the concomitant theory of vision are deficient because the study of lenses is not included. Lenses only became objects of scientific inquiry in the Middle Ages. In Antiquity lense-shaped objects were used as burning glasses, possibly also for magnifying purposes, but this did not lead to theorizing about their properties. Passages from ancient authors on lenses used for burning are cited Rau (1982) App. ii, 23–25, e.g. Aristotle *APo.* 1.31 88a14–17, Theophrastus *Ign.* 73, Pliny *Nat.* 37.28.

For Goethe's translation of 4.13.1 + 4.14.1 'Democritus und Epicurus nach Plutarch' see below, ch. 4.14, Commentary D(d) ad init.

Individual Points

§1 The doctrine of Leucippus and Democritus has here been reduced to that of Epicurus. We may note that according to the *Etymologicum magnum* Democritus ascribed night vision to the owl because of 'the fire in its eyes' (text cited below section E(b)§1). If this is historically correct, his doctrine of vision is similar to the dual theory of Empedocles (see §12), and the information on his theory of vision found elsewhere incomplete.

P1: 'Offenbar ist hier an das atomistische Placitum ein fremdes, Platonisches angeflickt', says Diels (1881) 849; cf. M–R 1.267. He argues (*ibid.* 849–850) that P has coalesced two lemmata, viz. §1 and §10, and correctly pointed out that in the Florentine manuscript L the augmented but false ps.Plutarchean lemma replaced the original Aëtian lemma as the first of its series of abstracts from S. What happened however is even a bit more complicated, see at section A above. Diels' conjecture ἐκκρίσιν (presumably inspired by G's ἐκχυσιν) for P's εἴσκρισιν and S's equivalent ἔγκρισιν are moreover both *Verschlimmbesserungen*. We note however that the first part of the attached Platonic *placitum* entered the Arabic tradition via Q, see Koetschet (2017) 172 with n. 11, who points out that al-Razī tells us that he had read and excerpted Q's translation.

P2–4: After P1 as reflected in P^G, i.e. before the corruption attested by P^B and P^Q, the newly forged Empedocles lemma P2 did provide a compromise: not an opposition between images or rays but rather a blend of these, though we do not hear in which direction the combined product is supposed to travel. After the occurrence of the corruption and the subsequent modifications of the text of the now unified first lemma P2 becomes an appended variation: not penetrating images as well as rays but a blend of images and rays. P's chapter in its final shape has its own doxographical logic, rather different from A's original intentions and even more remote from historical correctness, but apparently still useful for the purposes of discussion and teaching.

§2 Timagoras (or Timasagoras, as he is called in the papyri) follows after the Atomists because he is an Epicurean, however dissident. The difference between images and effluences is real, though at a first glance perhaps less important in the context of the main diaphonia of the present chapter: Timagoras is still on the same side of the divide as Epicurus. Also note that the real Epicurus, speaking of images, mentions effluences too (*Ep.Hdt.* 46). However also in the next chapter (4.14.1) an effluences doctrine is contrasted with an images doctrine (4.14.2), in a sequence that is the converse of the first two lemmata of ch. 4.13. The doxography is interested in instances of dissent within a school, so of course has some interest in insisting on the difference here. Interestingly enough Cicero calls Timagoras a true-blue Epicurean, *maiorum similis* (*Luc.* 80). On Timagoras see further Verde (2010), who however suggests that a biased tradition may be postulated.

§3 Treatises Περί ὀψέως and Περί χρωμάτων are attested for Strato at Diogenes Laertius *V.P.* 5.59. On Strato's view that colour mixes with air see Ganson (2004) 359–360.

§4 Aristarchus follows after Strato because he is the latter's pupil, see ch. 1.15.5. *Mutandis mutatis* his position is comparable to that of Timagoras vis-à-vis Epicurus, or Xenocrates vis-à-vis Pythagoras at ch. 4.2.3. For σχήματα cf. Plato *Men.* 76c–d on Empedocles, quoted at section E(b) (and also Epicurus' μορφάι, *Ep.Hdt.* at D.L. 10.49, or Lucretius' *formae rerum*, *DRN* 4.104).

§5 Lejeune (1948) 22 n. 2 believes that the view is too 'simpliste' to be attributed to the astronomer Hipparchus, though perhaps, he adds, it is 'fort incomplètement exprimée'. But Hipparchus may have seen and referred to Egyptian pictures of the sun disk (the god Aten or Aton) with rays ending in hands (see www.images Aten). In the next lemma, §6, the name-labels of *ur*-mathematician Pythagoras and of Parmenides are added to the tenet of Hipparchus on the authority of certain authorities (cf. M–R 2.1.191–192), thus providing it with mathematical and physicist *titres de noblesse*. For the metaphor of touching with the hands compare also that of bending the outstretched hand back to the shoulder at ch. 4.14.3 below, now attributed to 'the followers of Pythagoras and the mathematicians' (cf. ch. 4.13 Commentary D(d)§3). The basic idea is the same as that of the standard Stoic doctrine at Diogenes Laertius *V.P.* 7.157 cited below at ch. 4.15, E(b)§2, where contact between the base of visual cone (for which see e.g. Euclid) with the object seen is compared with that by means of a stick (βακτηρία). Vision is seen as a kind of touch. For Posidonius' etymology of ὀψίς ('sight') from ἄπτω, ἄψω ('I touch, will touch') see below, section D(d)§11. In general see also below, ch. 4.15 Commentary D(d)§1 and section E(b)§2.

Cherniss (1951) 154 n. 6, commenting on Plutarch *Fac.* 921D (also see his Loeb ed. ad loc.), argues that the name-label Hipparchus at §5 is a standard mistake (for Hippasus or Archippus); Thesleff (1965) 92 suggests ‘possibly’ Hippasus. But Hipparchus is not only an astronomer but also a mathematician. *Pace* Lejeune, Cherniss, and Thesleff, he may represent the view of the mathematicians in general (e.g. that of Euclid’s *Optics*, or of Heron), which otherwise is absent from our *Placita* chapter (but see chs. 3.5.3–6 and 4.14.3, cited at *Loci Aetiani* above). The optical cone of Euclid’s first definition is not mentioned (we have to wait till ch. 4.15.2).

Jones (1994) 49–56 argues that the body of the text (accordingly apart from the introduction) of the so-called *recensio Theonis* of the Euclidean *Optics* is the original version of the work. The designation *recensio Theonis* has been maintained by us as a matter of convenience. See now Siebert (2014a), who argues that, although more research of esp. the manuscript tradition of the various versions is needed, the Euclidean *Optics* (like those of Ptolemy) were updated in late antiquity.

§6 Theophrastus *Sens.* 3–4 (28A46) finds no evidence enabling him to attribute to Parmenides a theory of perception through the individual senses, see Mansfeld (2018c). This shows that the attribution of the theory of Hipparchus to him, though hard to explain, is as farfetched as that to Pythagoras, the reference to the Poem notwithstanding.

§7 The lemma has been assembled from *Tim.* 45b–c and 67c, and focuses on the central part of Plato’s exposition, namely the fusion of the various types of light. The mention of the congenerate air looks like a misunderstanding: in Plato it is the external light that is akin to that issuing from the eyes. συναύγεια presumably is short for συμπαγές γενόμενον ἐν σώμα οἰκειωθὲν συνέσται (*Tim.* 45c4). For all this see Baltussen (2000a) 232–233.

§8 The anatomy of the visual apparatus as based on dissection described by Calcidius in *Tim.* c. 246 (cited section E(a)§8) is that of Herophilus rather than Alcmaeon; see Mansfeld (1975) 28–30, *pace* Perilli (2001) 59–62.

§9 ὁρᾶν ἡμᾶς echoes the ὁρῶμεν of the chapter heading and is paralleled at ch. 4.15.2[9] ὁρᾶν ἡμᾶς below, so the formula is acceptable for A. Also cf. the parallel beginning of ch. 4.16.2[5] Ἀλκμαίων ἀκούειν ἡμᾶς. In the physical fragments concerned with the Peripatetics Diels attributes to AD the only parallel of an infinitive plus ἡμᾶς is in fr. 15, αἰσθάνεσθαι δ’ ἡμᾶς παθούσης τι τῆς αἰσθήσεως; this is not, however, at the beginning but at the end of the excerpt.

For the problems pertaining to Aristotle’s theory (or rather theories) of vision see above, ch. 3.5, Commentary D(d)§§4–6.

§11 The Posidonian ἀγῶν σύμφυσις is synonymous with the Platonic συναύγεια of §9; see Diels’ note ad loc., *DG* 853: ‘Posidonius etiam hic πλατωνίζει’,

and Kidd on F 194 E.-K.: ‘another clear interpretation of Plato, *Tim.* 45cf’. Compare Posidonius’ etymologizing F 193 E.-K. cited section E(b)§11, ‘the etymology of ‘sight’ (ὁψίς) derives from ‘I touch, will touch’ (ἄπτω, ἄψω), being a kind of touching (ἄψίς) that introduces and illuminates each of the underlying objects, like fire’. For vision as touch see above, section D(d)§4. Kidd’s comment on F 193 E.-K. is confused. He replaces ἐμποιοῦσα by ἐλλαμποῦσα, not realizing that ἐμποιοῦσα pertains to the production of the image in the eye, and that according to this witness too Posidonius follows what Theophrastus calls Plato’s compromise position.

§§12–13 For the coalescence of these two paragraphs see above, section A.

§12 The point about the two views of Empedocles (and so the main opposition of the whole chapter) derives from the passage in Aristotle quoted below, section E(b)§12; see M–R. 2.1.190–191. Theophrastus too argues that Empedocles speaks both of the fire in the eye, and of colours traveling to it as effluences (*Sens.* 7). O’Brien (1969) argues that Aristotle’s attribution of a visual ray to Empedocles is mistaken and says (p. 140) that ‘Theophrastus says nothing about fire leaving the eye as a factor in the act of vision’. But what he says at *Sens.* 7 is that ‘the fire in the eye (τὸ ... ἐντὸς αὐτῆς ... πῦρ) passes through (δι-έναι) the water and earth that surround it because it is fine-textured, just as the light in lanterns’. So he appears to agree with Aristotle after all. (We cannot enter here into the *constitutio* and interpretation of the difficult fragment 31B84 DK as a whole, for which see e.g. Rashed 2005 and Primavesi 2011, 510 and 2013, 701–702).

In ch. 1.15.3 ‘On colours’, the Greek tradition consisting of P and S, representing one side of the opposition, has Ἐμπεδοκλῆς χρώμα τὸ τοῖς πόροις τῆς ὀφθαλμοῦ ἐναρμόττον (‘Empedocles (says) that colour is what fits the pores of the eyes’), while Q, representing the other side, has *Empedokles war der Meinung, daß die Farbe etwas ist, worauf die Sehstrahlen fallen*. This difference cannot be due to a mistranslation on Q’s part, so represents a genuine reading, or rather tradition; see above, ch. 1.15, Commentary D(d)§3. When taken together these witnesses for ch. 1.15.3 are in agreement with the contents of the present paragraph.

At M–R. 2.1.190–191 we argue that the note at §12 on Empedocles’ preference for the effluences theory is a reference to (a part of) the anterior doxographical tradition (but we now no longer believe that πλείους refers to interpreters rather than possibilities of interpretation). Ch. 4.14.3 apparently describes the combination of a fiery beam issuing from the eyes and effluences that come to be on the surface of a mirror. The word ἀκτίς is attested for Empedocles in the verbatim fragment 31B84.6 DK, while the term ἀπορροαί is attested at 31B89 DK. Primavesi (2013) 701–702 argues against the assumption of visual rays by Empedocles and rejects Aristotle’s interpretation of 31B84 DK. But the

fact that—just, as we may recall, the sun shines with rays—‘the fire shines out with rays’ (31B84.5–6 DK πῦρ δ’ ἔξω ... / λάμπεσκειν ... ἀκτίνεσσιν, cf. B84.11 πῦρ δ’ ἔξω δίλεσκειν, ‘the fire jumped out’) at the very least makes Aristotle’s reading understandable, and even plausible.

e Other Evidence

The Pyrrhonist view (cited below, section E(b)§ο) is that we do not know ‘how we see’, a clear reference to the multiplicity of views resulting in diaphonia.

For their overviews of contrasting and compromise doxai Apuleius and Calcidius and numerous others consulted sources that are close to the *Placita*. The author of the fragmentary optical treatise ascribed to Geminus argued that from the point of view of mathematical optics the alternatives intromission and extramission as well as the compromise view are equally unimportant, while Euclid had argued in favour of the extramission theory. The alternatives are mentioned—to give some examples—as late as in the *Optics* of the Arabic scientist ibn al-Haytham in the eleventh, by the Byzantine commentator Sophonias’ *in de Anima* in the thirteenth, by the Italian humanist and polymath Leon Battista Alberti’s *De pictura* in the fifteenth (who says they are out of date), and by the learned Italian physician Mercuriale’s *De morbis oculorum* in the late sixteenth century (see section E(b) General texts ad fin.). For the tradition in the Islamic world and its Greek precedents see Adamson (2016) 77–83, for al-Razī’s criticism of the extramission theory Koetschet (2017).

Goethe, *Farbenlehre* (Didaktischer Teil, Einleitung) writes: ‘Hierbei erinnern wir uns der alten ionischen Schule, welche mit so großer Bedeutsamkeit immer wiederholte: nur von Gleichem werde Gleiches erkannt; wie auch der Worte eines alten Mystikers [sc. Plotinus, see section E(a)§11], die wir in deutschen Reimen folgendermaßen ausdrücken möchten: *Wär’ nicht das Auge sonnenhaft, / Wie könnten wir das Licht erblicken? / Lebt’ nicht in uns des Gottes eigne Kraft, / Wie könnt’ uns Göttliches entzücken?* Jene unmittelbare Verwandtschaft des Lichts und des Auges wird niemand läugnen, aber sich beide zugleich als eins und dasselbe zu denken, hat mehr Schwierigkeit. Indessen wird es faßlicher, wenn man behauptet, im Auge wohne ein ruhendes Licht, das bei der mindesten Veranlassung von innen oder von außen erregt werde.’

 πολλῆς κακίας ψυχῆς, φύσιν ἔχοντες ἐπὶ τοῖς καλοῖς δάκνεσθαι, τῷ ἀμέτρῳ φθόνῳ
 τῆς κακίας αὐτοῖς διεγειρομένης, ὥσπερ ἰώδης τις καὶ φθοροποιὸς ἀκτὺς ἔξεισιν ἀπὸ
 τῆς κόρης αὐτῶν· καὶ αὐτὴ εἰσιούσα διὰ τῶν ὀφθαλμῶν τοῦ φθονομένου τρέψει τὴν
 ψυχὴν καὶ τὴν φύσιν εἰς δυσκρασίαν καὶ τοὺς χυμοὺς ἐπὶ σῆψιν καὶ εἰς νόσον ἄγει τὰ
 σώματα τούτων. **Diogenes Laertius VP.** 1.7 (on the Magi, Arist. fr. 36 R³) ἀλλὰ
 καὶ εἰδῶλων πλήρη εἶναι τὸν ἀέρα, κατ' ἀπόρροϊαν ὑπ' ἀναθυμιάσεως εἰσκρινομέ-
 νων ταῖς ὕψει τῶν ὀξυδερκῶν. 9.103 (according to the Sceptics) τὸ μὲν γὰρ ὅτι
 ὁρώμεν ὁμολογοῦμεν καὶ τὸ ὅτι τόδε νοοῦμεν γινώσκουμεν, πῶς δ' ὁρώμεν ἢ πῶς νοοῦ-
 μεν ἀγνοοῦμεν. **Plotinus Enn.** 4.5[29]2.8–13 καὶ οἱ ἐκχέοντες δὲ τὰς ὀψεις οὐκ ἂν
 ἔχουσιν ἀκολουθοῦν τὸ πάντως μεταξὺ τι εἶναι, εἰ μὴ φοβοῖντο μὴ πέσῃ ἡ ἀκτίς· ἀλλὰ
 φωτὸς ἐστί, καὶ τὸ φῶς εὐθυποροῦν. οἱ δὲ τὴν ἔνστασιν αἰτιώμενοι δέοιντο ἂν πάν-
 τως τοῦ μεταξὺ. οἱ δὲ τῶν εἰδῶλων προστάται διὰ τοῦ κενοῦ λέγοντες διένειν χώραν
 ζητοῦσιν, ἵνα μὴ κωλυθῇ. **ps.Galen (i.e. Porphyry) ad Gaur.** 11.2 οὕτω γὰρ καὶ
 ὀφθαλμὸς ὁρᾷ οὐ κῶνον μέχρ' οὐρανοῦ διαταθέντος ἀπὸ τῆς κόρης οὐδὲ ἀκτίνων
 περιχύσεως εἰς τὸ ὁρατὸν γωνίας κλάσει ἀπεργασαμένης οὐδ' εἰδῶλων ἐκρυσθέντων
 ἀπὸ τῶν ὁρωμένων εἰς τὸ ὁρᾶν, τῷ δ' ἐπιτηδείως ἡρμόσθαι τὸ μὲν ὁρᾶν τὸ δ' ὁρᾶ-
 σθαι. **Porphyry at Nem. NH** 7, p. 59.13–18 Πορφύριος (264F Smith) δὲ ἐν τῷ
 Περὶ αἰσθήσεως οὔτε κῶνον οὔτε εἰδῶλον οὔτε ἄλλο τί φησιν αἵτιον εἶναι τοῦ ὁρᾶν
 ἀλλὰ τὴν ψυχὴν αὐτὴν ἐντυγχάνουσαν τοῖς ὁρατοῖς ἐπιγινώσκειν ἑαυτὴν οὖσαν τὰ
 ὁρατὰ τῷ τὴν ψυχὴν συνέχειν πάντα τὰ ὄντα καὶ εἶναι τὰ πάντα ψυχὴν συνέχουσιν
 σώματα διάφορα. μίαν γὰρ βουλόμενος εἶναι πάντων ψυχὴν τὴν λογικὴν εἰκότως
 φησὶ γνωρίζειν ἑαυτὴν ἐν πᾶσι τοῖς οὖσιν. **Arnobius Adv.Nat.** 2.7.8 *cum videre nos
 dicimus, radiorum et luminis intentione videamus an rerum imagines advolent
 et nostris in pupulis sidant?* **Iamblichus CMSc** c. 25.43–48 (Archytas fr. 25 text
 C. Huffman—after Aristotle's *de Pythagoreis*?) οἱ δὲ Πυθαγόρειοι διατρίψαντες
 ἐν τοῖς μαθήμασι καὶ τό τε ἀκριβὲς τῶν λόγων ἀγαπήσαντες, ὅτι μόνον εἶχεν ἀπο-
 δεῖξεις ὧν μετεχειρίζοντο ἄνθρωποι, καὶ ὁμολογούμενα ὁρῶντες ἔνισσον τὰ περὶ τὴν
 ἁρμονίαν ὅτι δι' ἀριθμῶν καὶ τὰ περὶ τὴν ὕψιν μαθήματα (ἔτι) διὰ (δια)γραμμάτων,

ὅλως αἷτια τῶν ὄντων ταῦτα ᾤθησαν εἶναι καὶ τὰς τούτων ἀρχάς. **Macrobius** *Sat.* 7.14.3–5 + 13–14 *ipsam vero videndi naturam non insubide introspexit Epicurus* (cf. fr. 319 Usener), *cuius in hoc non est ut aestimo improbanda sententia, adstipulante praecipue Democrito* (fr. 471 Luria), *qui sicut in ceteris ita et in hoc paria senserunt. ergo censet Epicurus ab omnibus corporibus iugi fluore quaeipiam simulacra manare, nec umquam tantulam moram intervenire quin ultro ferantur inani figura cohaerentes corporum exuviae, quarum receptacula in nostris oculis sunt et ideo ad deputatam sibi a natura sedem proprii sensus recurrunt. ... (13–14) in propatulo est ... quod decepit Epicurum. ... constat autem visum nobis hac provenire ratione. genuinem lumen e pupula, quaecumque eam verteris, directa linea emicat. id oculorum domesticum profluvium, si repperit in circumfuso nobis aëre lucem, per eam directim pergit quam diu corpus offendat. ... ergo tria ista necessaria nobis sunt: lumen quod de nobis emittimus, et ut aër qui interiacet lucidus sit, et corpus quo offenso desinat intentio. **Hunain ibn Ishaq** *The Book of the Ten Treatises of the Eye* III, pp. 31.20–33.31 Meyerhof. **Ibn Sina** (Avicenna) *al Sifa* p. 734 Horten–Wiedemann (pertains also to ch. 4.14) ‘Für die optische Wahrnehmung dieser Bilder gibt es drei Theorien. 1. Die Lehre von den Sehstrahlen; nach ihr tritt aus dem Auge ein Strahl aus, der sich von sich selbst aus bis zu dem glatten Gegenstande, den Spiegel, erstreckt. Dabei verwandelt er die in der Welt vorhandenen Strahlen, die sich ihm beimischen. ... 2. Nach der Lehre der reinen (*muḥassalin*) Naturphilosophen treten aus dem Auge absolut keine Strahlen aus. Es liegt vielmehr im Objekt selbst begründet, daß es sich im Auge abzeichnet, wenn es sich diesem gegenüber befindet; dabei muß das zwischen beiden liegende Medium durchsichtig und das Objekt ein Selbstleuchter sein. ... 3. Die dritte Theorie behauptet: Das Bild des Objekts wird so, wie letzteres in Wirklichkeit ist, im Spiegel abgebildet.’ *de An.* (trans. lat.) 3.5.32–47 Van Riet *dicimus ergo quod famosae sententiae de hoc* (sc. de visu) *tres sunt, quamvis unaquaeque earum habeat subdivisiones. una enim earum est sententia eorum qui tenent quod radii lineares exeunt de pupilla ad modum pyramidis, cuius caput est versus oculum et eius basis ad partem rei visae. ... alia vero sententia est eius qui tenet quod radius exit de pupilla, sed de toto eo non tantum pervenit quod tangat haemisphaerium caeli nisi per disgregationem ex qua provenit dilatio visus, sed, cum egreditur et coniungitur aeri lucido, fit ei aer instrumentum et apprehendet per illum. tertia autem sententia est eius qui tenet quod, sicut alia sensibilia non apprehenduntur ex hoc quod aliquid sensum pertingat ad illa vel offendant in illa vel coniungatur eis aut transmittat nuntium ad illa, sic visio non fit ideo quod radius exeat aliquo modo et occurrat viso, sed quia forma visi pervenit ad visum, translucente reddente ipsam.* (Engl. trans. from the Arabic of Avicenna’s own abridgement of this passage in his *Masriqiyyun* at Hasse 2000, 119–120). **Ibn al-Haytham** (**Alhacen**) *Kitab al-Manazir* (i.e. *Optics*) 1.1.[3] Sabra ‘Natural scientists (i.e. philosophers of nature) have inquired into the nature of this subject according to their art The learned among them settled upon the opinion that vision is effected by a form which comes from the visible object to the eye*

and through which sight perceives the form of the object. Mathematicians ... have continued through the ages to disagree about the principles of this subject. But for all ... the divergence of their views, in general they agree that vision is effected by a ray which issues from the eye to the visible object and by means of which sight perceives the object' etc. **Eustratius** in *EN* 271.3–5 ὥς γὰρ περὶ τὸ λευκὸν ἢ ὄρασις ἐνεργεῖ εἴτε εἰσδεχομένη εἴτε ἐκπέμπουσα κατὰ τὰς διαφόρους δόξας τῶν περὶ τῆς ὀπτικῆς φιλοσοφησάντων, καὶ περὶ τὸ μέλαν ὡσαύτως. **Barhebraeus** *Butyrum Sapientiae* V.II.i.1–3, p. 151 Takahashi 'Concerning how vision works there have been three opinions. One is that which says that a ray goes out from the visual organ and meets the object seen and conveys its image to the visual organ. ... The second opinion asserts that the image of the object seen is imprinted as it is in the eye and is seen. ... The third opinion is that of the natural philosophers who are correct in (their) inquiry, who say: When the object seen is (placed) opposite the visual organ and there is a transparent body between them, a likeness of the object seen is formed in the eye.' **Sophonias** in *de An.* 75.2–5 πῶς ποτε καὶ τὸ ὄρᾶν γίνεται, πότερον κατὰ τινων ἀκτίνων σωματικῶν ἐκπομπὴν ἀπὸ τῶν ὀμμάτων, ὥσπερ οἱ μαθηματικοὶ λέγουσιν, ἢ τῇ εἰσδοχῇ τῆς τῶν ὀρωμένων ποιότητος, ὥσπερ οἱ φυσικοὶ; ἢ ἕτερόν τι μᾶλλον καὶ τρίτον, καὶ τοῦτ' ἔσται δῆπου κατὰ συνάγειαν; **Leon Battista Alberti** *De pictura* 1.5, pp. 103–104 Sinisgalli *exordiamurque a Philosophorum sententia, qui metiri superficies affirmant radijs quibusdam quasi visendi ministris, quos idcirco visivos nuncupant, quod per eos rerum simulacra sensui imprimantur. ... verum non minima fuit, apud priscos, disceptatio a superficie, an ab oculo ipsi radij erumpant. quae disceptatio sane difficilis, atque apud nos admodum inutilis pretereatur.* **Hieronymus Mercurialis** *De morbis oculorum* fol. 2A (cf. Vanagt 2011, 119) *cum visio sit potius passio, quam actio; nam clarum est, visionem fieri patiente humore crystallino pro cuius resolutione dicendum est, fuisse peculiare Peripateticorum dogma, quod visio fiat per solam specierum receptionem, & ideo non est mirum, si Princeps dixerit, magis passione, quam actione perfici. medici alia via incedentes existimarunt (sc. visionem) fieri per receptionem specierum, & radiorum emissionem; unde cum receptio speciei passio quaedam sit, emissio autem, potius actio, iure dictum est, esse haec symptomata in genere actionis loesae (i.e. laesae).*

§0 *Whether it exists:* **Diogenes Laertius** *V.P.* 9.103–104 (**Aenesidemus** fr. 5 Polito) τὸ μὲν γὰρ ὅτι ὁρώμεν ὁμολογοῦμεν καὶ {τὸ} ὅτι τὸδε νοοῦμεν γινώσκουμεν, πῶς δ' ὁρώμεν ἢ πῶς νοοῦμεν ἀγνοοῦμεν. ... (104) οὐ γὰρ τὸ ὁρᾶν ἀναιρεῖν, ἀλλὰ τὸ πῶς ὁρᾶν ἀγνοεῖν.

§1 **Leucippus Democritus Epicurus:** **Aristotle** *Div.* 2 464a5–6 ὥσπερ λέγει Δημόκριτος (fr. 472 Luria) εἶδωλα καὶ ἀπορροίας αἰτιώμενος. *Sens.* 2 438a5–12 Δημόκριτος (68A121 DK) ... ὅτι δ' οἶεται τὸ ὁρᾶν εἶναι τὴν ἔμφασιν, οὐ καλῶς ... ἄτοπον δὲ καὶ τὸ μὴ ἐπελθεῖν αὐτῷ ἀπορήσαι διὰ τί ὁ ὀφθαλμὸς ὁρᾷ μόνον, τῶν δ' ἄλλων οὐδὲν ἐν οἷς ἐμφαίνεται τὰ εἶδωλα. *Sens.* 2 438a25–27 ἄλογον δὲ ὅλως τὸ ἐξιώντι τινὶ τὴν ὄψιν ὁρᾶν, καὶ ἀποτείνεσθαι μέχρι τῶν ἄστρον, ἢ μέχρι τινὸς ἐξιοῦσαν συμφύεσθαι, καθάπερ λέγουσί τινες. **Theophrastus** *Sens.* 50 (on Democritus, 68A135 DK) ὁρᾶν μὲν οὖν ποιεῖ τῇ ἐμφάσει· ταύτην δὲ ἰδίως λέγει· τὴν γὰρ ἔμφασιν οὐκ εὐθὺς ἐν τῇ κόρῃ γίνεσθαι, ἀλλὰ τὸν ἀέρα τὸν μεταξὺ τῆς ὄψεως καὶ τοῦ ὁρωμένου τυποῦσθαι συσσελλόμενον ὑπὸ τοῦ ὁρωμένου καὶ τοῦ ὁρώντος· ἅπαντος γὰρ αἰεὶ γίνεσθαι τινὰ ἀπορροήν· ἔπειτα τοῦτον στερεὸν ὄντα καὶ ἀλλόχρων ἐμφαίνεσθαι τοῖς ὀμμασιν ὑγροῖς. καὶ τὸ μὲν πυκνὸν οὐ δέχεσθαι, τὸ δὲ ὑγρὸν διέναι. *Sens.* 80 (Democritus 68A135 DK) ὁρᾶν δὲ φησι διὰ τὴν ἀπορροήν καὶ τὴν ἔμφασιν τὴν εἰς τὴν ὄψιν. **Epicurus** *Ep.Hdt.* at D.L. 10.46 καὶ μὴν καὶ τύποι ὁμοιοσχήμενες τοῖς στερεμνίοις εἰσὶ ... τούτους δὲ τοὺς τύπους εἶδωλα προσαγορεύομεν κτλ. **Cicero** *ND* 1.108 *vos autem non modo oculis imagines sed etiam animis inculcatis.* *Fin.* 1.21 *quae sequitur sunt tota Democriti* (fr. 182 Luria), *atomi, inane, imagines, quae εἶδωλα nominant, quorum incursione non solum videamus, sed etiam cogitemus.* **Lucretius** *DRN* 4.256–258 *illud in his rebus minime mirabile habendumst, / cur, ea quae feriant oculos simulacra videri / singula cum nequeant, res ipsae perspiciantur.* *DRN* 6.921–923 *principio omnibus ab rebus, quascumque videmus, / perpetuo fluere ac mitti spargique necessest / corpora quae feriant oculos visumque lacessant.* **Galen** *PHP* 7.7.21–22 πολὺ τοῖνυν ἄμεινον ὥς ἐν ἐσφαλμένοις Ἐπίκουρος (fr. 319 Usener) ἀπεφάνητο τῶν Στωϊκῶν. (22) ἐκεῖνοι μὲν γὰρ τῶν ὁρατῶν οὐδὲν ἄγουσιν ἄχρι τῆς ὀπτικής δυνάμεως, ὁ δ' Ἐπίκουρος ἀπεφάνητο ἄγειν. **Diogenes of Oenoanda** fr. 9.ii.9–14 Smith τὰ οὖν ἀπὸ τῶν πραγμάτων ῥέοντα εἶδωλα, ἐνπερίπτοντα ἡμῶν | ταῖς ὄψεσιν, τοῦ τε ὁρᾶν | ἡμᾶς τὰ ὑποκείμενα | αἴτια γέινεται. **Alexander of Aphrodisias** in *Sens.* 24.18–21 ἡγεῖται δὲ αὐτός (sc. Democritus, fr. 477 Luria) τε καὶ πρὸ αὐτοῦ Λεὺκιππος καὶ ὕστε-

ρον δὲ οἱ περὶ τὸν Ἐπίκουρον (fr. 319 Usener) εἶδωλά τινα ἀπορρέοντα ὁμοίμορφα τοῖς ἀφ' ὧν ἀπορρεῖ (ταῦτα δὲ ἐστὶ τὰ ὁρατά) ἐμπίπτειν τοῖς τῶν ὁρώντων ὀφθαλμοῖς καὶ οὕτως τὸ ὁρᾶν γίνεσθαι. *in Sens.* 56.10–16 ἢ ἣν δόξα προκαταβεβλημένη περὶ τοῦ ὁρᾶν ὑπὸ τῶν ἀρχαίων, ὡς ἄρα τοῦ ὁρᾶν κατὰ τὴν ἀπὸ τῶν ὁρωμένων ἀπόρροϊαν γινομένου· εἶδωλα γάρ τινα ὁμοίμορφα ἀπὸ τῶν ὁρωμένων συνεχῶς ἀπορρέοντα καὶ ἐμπίπτοντα τῇ ὄψει τοῦ ὁρᾶν ἡτιῶντο. τοιοῦτοι δὲ ἦσαν οἱ τε περὶ Λεύκιππον (67A29 DK) καὶ Δημόκριτον. **Diogenes Laertius** *V.P.* 9.44 (on Democritus, 68A1 DK) ὁρᾶν δ' ἡμᾶς κατ' εἰδῶλων ἐμπτώσεις. **Etymologicum magnum** s.v. p. 260.40–41 Kallierges δείκελον· παρὰ δὲ Δημοκρίτῳ (68B123 DK) κατ' εἶδος ὁμοία τοῖς πράγμασιν ἀπόρροια. **Etymologicum magnum** p. 333.12–18 Kallierges s.v. γλαυῦ· ἔστι γὰρ ὀξυωπέστατον τὸ ζῶον, ἐν νυκτὶ ὁρᾶν θυνάμενον. Δημόκριτος (68A157 DK) δὲ ἵστορεῖ, ὅτι μόνον τῶν γαμψωνύχων καὶ σαρκοφάγων μὴ τυφλὰ τίκτει, ὅτι πολὺ πυρῶδες καὶ θερμὸν περὶ τοὺς ὀφθαλμοὺς ἔχει· ὁ σφοδρῶς ὀξὺ καὶ τμητικὸν ὑπάρχον, διαιρεῖ καὶ ἀναμίνγνυσι τὴν θρᾶσιν· διὸ καὶ ἐν ταῖς σκοτομήνησιν ὀρᾷ, διὰ τὸ πυρῶδες τῶν ὄψεων. **Gregory of Nyssa** *in Cant.* 105.11–13 Langerbeck φασὶ γὰρ οἱ τὰ τοιαῦτα φυσιολογεῖν ἐπιστήμονες ὅτι τὰς τῶν εἰδῶλων ἐμπτώσεις δεχόμενος, αἱ τῶν ὁρατῶν ἀπορρέουσιν, οὕτως ἐνεργεῖ τὴν ὄψιν ὁ ὀφθαλμός.

§3 Strato: Plutarch *Quaest. Conv.* 626A (Hieronymus of Rhodes fr. 53 Wehrli) ὅτι τοῖς προσπίπτουσιν ἀπὸ τῶν ὁρατῶν εἶδεσιν πρὸς τὴν ὄψιν κτλ. **Plotinus** *Enn.* 4.5[29]2.4–6 εἰ δὲ τροπὴν ἐργάζεται τὸ ὑποκείμενον σῶμα κεχρωσμένον, τί καλύει τὴν τροπὴν εὐθὺς πρὸς τὸ ὄμμα ἰέναι μηδενὸς ὄντος μεταξύ;

§5 Hipparchus: ps.Aristotle *Probl.* 31.16 959a2–6 διὰ τί οἱ μύωπες συνάγοντες τὰ βλέφαρα ὁρῶσιν; ἢ δι' ἀσθένειαν τῆς ὄψεως, ὥσπερ καὶ οἱ πρὸς τὰ πόρρω τὴν χεῖρα προσάγοντες, οὕτω καὶ τὰ βλέφαρα πρὸς τὰ ἐγγὺς προστίθενται ὥσπερ χεῖρα; **Arrian** *Reb. Phys.* fr. 3, p. 2.187.17–18 Roos–Wirth at Stob. *Ecl.* 1.29.2 (Posidonius fr. 338b Theiler) ὄψις δὲ ἐπὶ τὸ ὁρώμενον αὐτὸ ἐκπέμπεται. **Plotinus** *Enn.* 4.5[29]2.12–13 καὶ οἱ ἐχέοντες δὲ τὰς ὄψεις οὐκ ἂν ἔχοιεν ἀκολουθοῦν τὸ πάντως μεταξύ τι εἶναι, εἰ μὴ φοβοῖντο μὴ πέση ἡ ἀκτίς· ἀλλὰ φωτὸς ἐστὶ, καὶ τὸ φῶς εὐθυποροῦν. **Porphyry** *in Harm.* p. 32.7–8 & 17–20 ἡ ὄρασις ἐκπέμπουσα ἐπὶ τὸ ὑποκείμενον τὴν ὄψιν κατὰ διάδοσιν, ὥς φασιν οἱ μαθηματικοί, τὴν ἀντίληψιν ποιεῖται τοῦ ὑποκειμένου. ... ἢ μὲν γὰρ ὄψις τὰ ἐκτὸς ὀρᾷ ἐπιβάλλουσα αὐτοῖς, ὧν τὴν ἀντίληψιν ποιεῖται, λέγω δ' ἐπὶ τε μείζονος καὶ ἐλάττονος διαστήματος, καὶ διὰ τοῦτο δόξαν οὐκ ἀπίθανον ἡμῖν τοῦ αὐτὴν θεωρεῖν τὰ ἐν σχέσει παρέχει.

§6 Pythagoras: Pythagorica Hypomnemata at Alex. Polyh. fr. 9 Giannatasio Andria (Pythagorei 58B1a DK) at D.L. 8.29 τὴν τ' αἴσθησιν κοινῶς καὶ κατ' εἶδος τὴν θρᾶσιν ἀτμόν τιν' ἄγαν εἶναι θερμόν. καὶ διὰ τοῦτον λέγεται δι' ἄερος ὁρᾶν καὶ δι' ὕδατος· ἀντερείδεσθαι γὰρ τὸ θερμόν ἐπὶ τοῦ ψυχροῦ. ἐπεὶ τοι εἰ ψυχρὸς ἦν ὁ ἐν τοῖς ὅμμασιν ἀτμός, διειστήκει ἂν πρὸς τὸν ὅμοιον ἀέρα· νῦν δὲ ἔστιν ἐν οἷς ἡλίου πύλας καλεῖ τοὺς ὀφθαλμούς.

§7 Plato: Plato *Thet.* 156d–e ἐπειδὴν οὖν ὄμμα καὶ ἄλλο τι τῶν τούτῳ συμμετρῶν πλησίανσαν γεννήσῃ τὴν λευκότητά τε καὶ αἴσθησιν αὐτῇ σύμφυτον, ἃ οὐκ ἂν ποτε ἐγένετο ἐκατέρου ἐκείνων πρὸς ἄλλο ἐλθόντος, τότε δὴ μεταξύ φερομένων τῆς μὲν ὄψεως πρὸς τῶν ὀφθαλμῶν, τῆς δὲ λευκότητος πρὸς τοῦ συναποτίκτοντος τὸ χρῶμα, ὁ μὲν ὀφθαλμός ἄρα ὄψεως ἔμπλεως ἐγένετο καὶ ὀρᾷ δὴ τότε καὶ ἐγένετο

οὐ τι ὄψις ἀλλ' ὀφθαλμός ὁρῶν, τὸ δὲ συγγενήσαν τὸ χρώμα λευκότητος περιεπλήσθη καὶ ἐγένετο οὐ λευκότης αὖ ἀλλὰ λευκόν. *Resp.* 507d–508b ἐνούσης που ἐν ὀμμασιν ὀψεως καὶ ἐπιχειροῦντος τοῦ ἔχοντος χρῆσθαι αὐτῇ, παρούσης δὲ χρώας ἐν αὐτοῖς, ἐὰν μὴ (ε) παραγένηται γένος τρίτον ἰδίᾳ ἐπ' αὐτὸ τοῦτο πεφυκός, οἶσθα ὅτι ἡ τε ὄψις οὐδὲν ὄψεται, τὰ τε χρώματα ἔσται ἀόρατα. κτλ. *Tim.* 45b–d (cited Galen *PHP* 7.6.5–9) τὸ γὰρ ἐντὸς ἡμῶν ἀδελφὸν ὃν τούτου πῦρ εἰλικρινές ἐποίησαν διὰ τῶν ὀμμάτων ρεῖν λείον καὶ πυκνὸν ὅλον μὲν, μάλιστα δὲ τὸ μέσον συμπίλησαντες (c) τῶν ὀμμάτων, ὥστε τὸ μὲν ἄλλο ὅσον παχύτερον στέγειν πᾶν, τὸ τοιοῦτον δὲ μόνον αὐτὸ καθαρὸν διηθεῖν. ὅταν οὖν μεθημερινὸν ἢ φῶς περὶ τὸ τῆς ὀψεως ρεῖμα, τότε ἐκπίπτουν ὅμοιον πρὸς ὅμοιον, συμπαγές γενόμενον, ἐν σώμα οἰκειωθὲν συνέστη κατὰ τὴν τῶν ὀμμάτων εὐθυωρίαν, ὅπηπερ ἂν ἀντρεῖδι τὸ προσπίπτον ἐνδοθεν πρὸς ὃ τῶν ἔξω συνέπεσεν. ὁμοιοπαθὲς δὴ δι' ὁμοιότητα πᾶν γενόμενον, ὅτου τε ἂν αὐτὸ (d) ποτε ἐφάπτηται καὶ ὃ ἂν ἄλλο ἐκείνου, τούτων τὰς κινήσεις διαδιδὼν εἰς ἅπαν τὸ σῶμα μέχρι τῆς ψυχῆς αἰσθησιν παρέσχετο ταύτην ἢ δὴ ὁρᾶν φαμεν. *Tim.* 67c τέταρτον δὴ λοιπὸν ἔτι γένος ἡμῖν αἰσθητικόν, ὃ διελέσθαι δεῖ συχνὰ ἐν ἑαυτῷ ποικίλματα κεκτημένον, ἃ σύμπαντα μὲν χρώας ἐκαλέσαμεν, φλόγα τῶν σωμάτων ἐκάστων ἀπορρέουσιν, ὅψει σύμμετρα μόρια ἔχουσιν πρὸς αἰσθησιν· ὀψεως δ' ἐν τοῖς πρόσθεν αὐτὸ περὶ τῶν αἰτίων τῆς γενέσεως ἐρρήθη. **Theophrastus** *Sens.* 5 τὴν μὲν ὄψιν ποιεῖ (sc. Plato) πυρὸς (διὸ καὶ τὸ χρώμα φλόγα τιν' ἀπὸ τῶν σωμάτων σύμμετρα μόρια τῇ ὀψει ἔχουσιν), ὡς ἀπορροῆς τε γινομένης καὶ δέον συναρμόττειν ἀλλήλοις ἐξιῶσαν μέχρι τινὸς συμφύεσθαι τῇ ἀπορροῇ καὶ οὕτως ὁρᾶν ἡμᾶς· ὥσπερ ἂν εἰς τὸ μέσον τιθεῖς τὴν ἑαυτοῦ δόξαν τῶν τε φασκόντων προσπίπτειν τὴν ὄψιν καὶ τῶν φέρεσθαι πρὸς αὐτὴν ἀπὸ τῶν ὁρατῶν. **Plutarch** *Quaest. Conv.* 626C ἡμεῖς δὲ τὴν Πλατωνικὴν φυλάττοντες ἀρχὴν ἐλέγομεν ὅτι πνεῦμα τῶν ὀμμάτων αὐγροειδὲς ἐκπίπτει ἀνακίρναται τῷ περὶ τὰ σώματα φωτὶ καὶ λαμβάνει σύμπληξιν, ὥσθ' ἐν ἑξ ἁμφοῖν σῶμα δι' ὅλου συμπαθὲς γενέσθαι κτλ. **Alcinous** *Did.* 18 p. 173.16–23 H. ἰδρῦσαντες δὲ περὶ τὸ πρόσωπον τὰ φωσφόρα ὀμματα καθεῖρξαν ἐν αὐτοῖς τοῦ πυρὸς τὸ φωτοειδές, ὅπερ λείον ὑπάρχον καὶ πυκνὸν ἀδελφὸν ὥοντο εἶναι τοῦ μεθημερινοῦ φωτός. τοῦτο δὴ ῥᾶστα δι' ὅλων μὲν τῶν ὀφθαλμῶν, μάλιστα δὲ κατὰ τὸ μέσον αὐτῶν διεκθεῖ, τὸ καθαρώτατόν τε καὶ εἰλικρινέστατον· ὃ γινόμενον συμπαγές τῷ ἔξωθεν, ὅμοιον ὁμοίῳ, ὁρατικὴν αἰσθησιν παρέχεται· ὅθεν καὶ τοῦ φωτός νύκτωρ ἀπίοντος ἡ σκοτωθέντος οὐκέτι προσφύεται τὸ ἀφ' ἡμῶν ρεῖμα τῷ πλησίον ἀέρι, συνεχόμενον δὲ ἐντὸς ὁμαλύνει τε καὶ διαχεῖ τὰς ἐν ἡμῖν κινήσεις, ἐπαγωγὸν ὕπνου γινόμενον, παρ' ὃ καὶ μῦει τὰ βλέφαρα. **Pollux** *Onom.* 2.63 ὃ δὲ Πλάτων (*Tim.* 45b) εἶρηκε φωσφόρα ὀμματα· λέγοντο δ' ἂν ὀφθαλμοὶ λάμποντες, στίλβοντες, θυμοειδεῖς, πυρώδεις· μαρμαρυγὰς ἀφιέντες, αἰγλήν, αὐγλήν. **Alexander of Aphrodisias** in *Sens.* 33.1–2 ὃ γὰρ Πλάτων σύμφυσιν εἶπε γίνεσθαι τοῦ τ' ἐξίοντος ἐκ τῆς ὀψεως φωτός καὶ τοῦ ἐκτός. **Plotinus** *Enn.* 4.5[29].2.1–4 εἰ μὲν οὖν τοιοῦτόν ἐστι τὸ ὁρᾶν, οἶον τὸ τῆς ὀψεως φῶς συνάπτειν πρὸς τὸ μεταξὺ [φῶς del. edd.] μέχρι τοῦ αἰσθητοῦ, δεῖ μεταξὺ τοῦτο εἶναι τὸ φῶς, καὶ ἡ ὑπόθεσις αὕτη τὸ μεταξὺ τοῦτο ζητεῖ. *Enn.* 4.5[29].4.1–4 ἀλλὰ τὸ συναφές τῆς ὀψεως φῶς πρὸς τὸ περὶ τὴν ὄψιν καὶ μέχρι τοῦ αἰσθητοῦ πῶς; ἡ πρῶτον μὲν τοῦ μεταξὺ ἀέρος οὐ δεῖται, εἰ μὴ ἄρα τὸ φῶς οὐκ ἂν ἀέρος ἄνεν λέγοιτο. *Enn.* 6.7[38].1.1–2 ὁ θεὸς ἢ θεὸς τις τὰς ψυχὰς φωσφόρα περὶ τὸ πρόσωπον ἔθηκεν ὀμματα. **Augustine** *Gen. ad litt.* 1.16, p. 23.9–19

Zycha iactus enim radiorum ex oculis nostris cuiusdam quidem lucis est iactus et contrahi potest, cum aërem, qui est oculis nostris proximus, intuemur, et emitti, cum ad eandem rectitudinem quae sunt longe posita adtendimus. nec sane, cum contrahitur, omnino cernere, quae longe sunt, desinit, sed certe obscurius, quam cum in ea obtutus emittitur. sed tamen ea lux, quae in sensu videntis est, tam exigua docetur, ut, nisi adiuvetur extraria luce, nihil videre possimus; et quia discerni ab ea non potest, quo exemplo demonstrari possit emissio in diem et contractio lucis in noctem, sicut dixi, reperire difficile est. **Damianus Opt.** 6.1 γινώσκειν δὲ δεῖ ὅτι τὸ κωνικὸν τοῦτο καὶ φωτοειδὲς τῆς ὕψεως σχῆμα διὰ τῶν ἀδῆλων πόρων τῆς κόρης φερόμενον σχίζεται ἐξ ἀνάγκης εἰς κεχωρισμένας μὲν ἀλλήλων ἀκτίνας, συναυγαζούσας δὲ πάντα τὸν μεταξὺ αὐτῶν τόπον, τουτέστιν ὅλου τοῦ κώνου τὸ βάθος.

§8 Alcmaeon: Theophrastus Sens. 26 (Alcmaeon 24A5 DK) ὁφθαλμοὺς δὲ ὁρᾶν διὰ τοῦ περὶ ὕδατος· ὅτι δ' ἔχει πῦρ δῆλον εἶναι, πληγέντος γὰρ ἐκλάμπειν. ὁρᾶν δὲ τῷ στίλβοντι καὶ τῷ διαφανεῖ, ὅταν ἀντιφαίνῃ, καὶ ὅσω ἂν καθαρώτερον ᾖ, μᾶλλον.

§9 Aristotle: Aristotle Top. 1.14 105b6–10 ὅτι ὁρώμεν εἰσδεχόμενοι τι, οὐκ ἐκπέμποντες· καὶ γὰρ ἐπὶ τῶν ἄλλων αἰσθήσεων οὕτως· ἀκούομεν τε γὰρ εἰσδεχόμενοι τι, οὐκ ἐκπέμποντες, καὶ γευόμεθα ὡσαύτως· ὁμοίως δὲ καὶ ἐπὶ τῶν ἄλλων. *de An.* 2.6 418a31–b10 πᾶν δὲ χρῶμα κινητικόν ἐστι τοῦ κατ' ἐνέργειαν διαφανοῦς, καὶ τοῦτ' ἐστὶν αὐτοῦ ἡ φύσις· διόπερ οὐχ ὁρατὸν ἄνευ φωτός, ἀλλὰ πᾶν τὸ ἐκάστου χρῶμα ἐν φωτὶ ὁράται. διὸ περὶ φωτὸς πρῶτον λεκτέον τί ἐστίν. ἔστι δὴ τι διαφανές· διαφανές δὲ λέγω ὃ ἔστι μὲν ὁρατόν, οὐ καθ' αὐτὸ δὲ ὁρατόν ὡς ἀπλῶς εἰπεῖν, ἀλλὰ δι' ἄλλοτριον χρῶμα. τοιοῦτον δὲ ἐστὶν ἀήρ καὶ ὕδωρ καὶ πολλὰ τῶν στερεῶν· οὐ γὰρ ἢ ὕδωρ οὐδ' ἢ ἀήρ, διαφανές, ἀλλ' ὅτι ἔστι τις φύσις ἐνυπάρχουσα ἡ αὕτη ἐν τοῦτοις ἀμφοτέροις καὶ ἐν τῷ αἰδίῳ τῷ ἄνω σώματι. φῶς δὲ ἐστὶν ἡ τοῦτου ἐνέργεια, τοῦ διαφανοῦς ἢ διαφανές. *Sens.* 2 438b2–5 περὶ μὲν οὖν τοῦ ἄνευ φωτὸς μὴ ὁρᾶν εἴρηται ἐν ἄλλοις· ἀλλ' εἴτε φῶς εἴτ' ἀήρ ἐστὶ τὸ μεταξὺ τοῦ ὁρωμένου καὶ τοῦ ὁμματος, ἡ διὰ τοῦτου κίνησις ἐστὶν ἡ ποιοῦσα τὸ ὁρᾶν. *differently Mete.* 3.2 372a29–32 ὅτι μὲν οὖν ἡ ὕψις ἀνακλᾶται, ὥσπερ καὶ ἀφ' ὕδατος, οὕτω καὶ ἀπὸ ἀέρος καὶ πάντων τῶν ἐχόντων τὴν ἐπιφάνειαν λεῖαν, ἐκ τῶν περὶ τὴν ὅψιν δεικνυμένων δεῖ λαμβάνειν τὴν πίστιν. *Mete.* 3.4.373b2–9 διὰ δὲ τὴν τῆς ὕψεως ἀσθένειαν πολλὰκις καὶ ἄνευ συστάσεως ποιεῖ ἀνάκλασιν, οἷον ποτε συνέβαινέ τινα πάθος ἡρέμα καὶ οὐκ ὁξὺ βλέποντι· αἰεὶ γὰρ εἰδῶλον ἐδόκει προηγείσθαι βαδίζοντι αὐτῷ, ἐξ ἐναντίας βλέπον πρὸς αὐτόν. τοῦτο δ' ἔπασχε διὰ τὸ τὴν ὅψιν ἀνακλᾶσθαι πρὸς αὐτόν· οὕτω γὰρ ἀσθενὴς ἦν καὶ λεπτή πάμπαν ὑπὸ τῆς ἀρρωστίας, ὥστ' ἔνοπτρον ἐγίγνετο καὶ ὁ πλησίον ἀήρ. cf. *Seneca Nat.* 1.3.7 *Aristoteles idem iudicat: 'ab omni' inquit 'levitate acies radios suos replicat; nihil autem est levius aqua et aëre; ergo etiam ab aëre spisso visus noster in nos redit. ubi vero acies hebes et infirma est, qualislibet aëris ictu deficiet. quidam itaque hoc genere valetudinis laborant ut ipsi sibi videantur occurrere, ut ubique imaginem suam cernant. quare? quia infirma vis oculorum non potest percurrere ne sibi quidem proximum aëra, sed resistit'.*

§10 Academics: Alexander of Aphrodisias(?) de An.Mant. 127.28–29 εἰ κατὰ ἀκτίνων ἔχρυσιν καὶ πρόπτωσιν τὸ ὁρᾶν, δῆλον ὅτι σώματα αὐταί. **Plotinus**

Enn. 4.5[29]2.8–12 καὶ οἱ ἐκχέοντες δὲ τὰς ὀψεις οὐκ ἂν ἔχοιεν ἀκολουθοῦν τὸ πάντως μεταξὺ τι εἶναι, εἰ μὴ φοβοῖντο μὴ πέση ἢ ἀκτίς· οἱ δὲ τὴν ἔνστασιν αἰτιώμενοι δέοιντο ἂν πάντως τοῦ μεταξὺ.

§11 *Posidonius: Etymologicum magnum* p. 645.52–54 Kallierges ὀψίς· ὡς μὲν Ποσειδώνιος (F 193 E.-K., 394 Theiler), παρὰ τὸ ἄπτω ἄψω, ἀψίς τις οὖσα, ἡ φῶς ἐμποιοῦσα καὶ καταυγάζουσα τῶν ὑποκειμένων ἕκαστα, ὡς πῦρ. **Sextus Empiricus** *M.* 7.93 καὶ ὡς τὸ μὲν φῶς, φησὶν ὁ Ποσειδώνιος (F 85 E.-K., 395a Theiler) τὸν Πλάτωνος Τίμαιον ἐξηγούμενος, ὑπὸ τῆς φωτοειδοῦς ὀψεως καταλαμβάνεται ἡ δὲ φωνὴ ὑπὸ τῆς ἀεροειδοῦς ἀκοῆς, οὕτω καὶ ἡ τῶν ὄλων φύσις ὑπὸ συγγενοῦς ὀφείλει καταλαμβάνεσθαι τοῦ λόγου. *M.* 7.119 Πλάτων δὲ ἐν τῷ Τιμαίῳ (*Tim.* 45b) πρὸς παράστασιν τοῦ ἀσώματου εἶναι τὴν ψυχὴν τῷ αὐτῷ γένει τῆς ἀποδείξεως κέχρηται. εἰ γὰρ ἡ μὲν ὄρασις, φησί, φωτὸς ἀντιλαμβανομένη εὐθύς ἐστὶ φωτοειδής, ἡ δὲ ἀκοὴ ἀέρα πεπληγμένον κρίνουσα, ὅπερ ἐστὶ τὴν φωνήν, εὐθύς ἀεροειδὴς θεωρεῖται, ἡ δὲ ὁσφρησις ἀτμοὺς γνωρίζουσα πάντως ἐστὶν ἀτμοειδής καὶ ἡ γεῦσις χυλοὺς χυλοειδής, κατ' ἀνάγκην καὶ ἡ ψυχὴ τὰς ἀσωμάτων ιδέας λαμβάνουσα κτλ. **Plotinus** *Enn.* 1.6[1].9 οὐ γὰρ ἂν πώποτε εἶδεν ὀφθαλμὸς ἥλιον ἡλιοειδὴς μὴ γεγεννημένος κτλ. (Ficino's translation read by Goethe runs *neque vero oculus unquam videret solem, nisi factus solaris esset*).

§12 *Empedocles: Empedocles* 31B84.5–11 DK πῦρ δ' ἔξω διαθρῶσκον, ὅσον ταναώτερον ἦεν, / λάμπεσκεν κατὰ βηλὸν ἀτειρέσιν ἀκτίνεσσιν· [...] / (11) πῦρ δ' ἔξω διέσκεν, ὅσον ταναώτερον ἦεν. 31B89 DK γνούς, ὅτι πάντων εἰσὶν ἀπορροαί, ὅσσ' ἐγένοντο. **Plato** *Men.* 76c–d οὐκοῦν λέγετε ἀπορροάς τινας τῶν ὄντων κατὰ Ἐμπεδοκλέα (31A92 DK);—σφόδρα γε.—καὶ πόρους εἰς οὓς καὶ δι' ὧν αἱ ἀπορροαὶ πορεύονται;—πάνυ γε.—καὶ τῶν ἀπορροῶν τὰς μὲν ἀρμόττειν ἐνίοις τῶν (d) πόρων, τὰς δὲ ἐλάττους ἢ μείζους εἶναι;—ἐστὶ ταῦτα.—οὐκοῦν καὶ ὄψιν καλεῖς τι;—ἔγωγε.—ἐκ τούτων δὴ 'σύνες ὅ τοι λέγω', ἔφη Πίνδαρος (fr. 105a Maehler). ἔστιν γὰρ χροὰ ἀπορροὴ σχημάτων ὅψει σύμμετρος καὶ αἰσθητός. **Aristotle** *Sens.* 2 437b10–15 ἐπεὶ εἴ γε πῦρ ἦν (sc. ὁ ὀφθαλμός), καθάπερ Ἐμπεδοκλῆς (cf. 31B84 DK) φησὶ καὶ ἐν τῷ Τιμαίῳ (*Tim.* 45b–46a) γέγραπται, καὶ συνέβαινε τὸ ὁρᾶν ἐξίόντος ὥσπερ ἐκ λαμπτήρος τοῦ φωτός (κτλ.). *Sens.* 2 437b23–438a4 Ἐμπεδοκλῆς (on 31B84 DK) δ' ἔοικε νομίζοντι ὅτε μὲν ἐξιόντος τοῦ φωτός, ὥσπερ εἴρηται πρότερον, βλέπειν· λέγει γοῦν οὕτως· (31B84 DK follows) ... ὅτε μὲν οὖν οὕτως ὁρᾶν φησὶν, ὅτε δὲ ταῖς ἀπορροαῖς ταῖς ἀπὸ τῶν ὁρωμένων. *GC* 1.8 324b26–29 τοῖς μὲν οὖν δοκεῖ πάσχειν ἕκαστον διὰ τινων πόρων εἰσιόντος τοῦ ποιούντος ἐσχάτου καὶ κυριωτάτου, καὶ τοῦτον τὸν τρόπον καὶ ὁρᾶν καὶ ἀκούειν ἡμᾶς φασὶ καὶ τὰς ἄλλας αἰσθήσεις αἰσθάνεσθαι πάσας. ... οἱ μὲν οὖν ἐπὶ τινων οὕτω διώρισαν, ὥσπερ καὶ Ἐμπεδοκλῆς (31A87 DK). **Theophrastus** *Sens.* 7 φησὶ (Empedocles 31A86 DK) τὸ μὲν ἐντὸς αὐτῆς (sc. τῆς ὀψεως) εἶναι πῦρ, τὸ δὲ περὶ αὐτὸ γῆν καὶ ἀέρα, δι' ὧν διέναι λεπτὸν ὃν καθάπερ τὸ ἐν τοῖς λαμπτήρσι φῶς. ... φέρεσθαι δὲ τὰ χρώματα πρὸς τὴν ὄψιν διὰ τὴν ἀπορροήν. **Alexander of Aphrodisias** in *Sens.* 23.6–24.9 λέγει δὲ αὐτὸν ποτὲ μὲν τὸ ἀπὸ τῆς ὀψεως ἐκπεμπόμενον φῶς αἰτιάσθαι τοῦ ὁρᾶν, ποτὲ δὲ ἀπορροίας τινὰς ἀπὸ τῶν ὁρωμένων. καὶ πρῶτόν γε παρατίθεται αὐτοῦ τὰ ἔπη (sc. 31B84 DK) δι' ὧν ἡγείται καὶ αὐτὸς πῦρ εἶναι τὸ φῶς καὶ τοῦτο ἐκ τῶν ὀφθαλμῶν προχεῖσθαι τε καὶ ἐκπέμπεσθαι καὶ τούτῳ τὸ ὁρᾶν γίνεσθαι. ... δεῖξας δὲ αὐτὸν διὰ

τούτων τῶν ἐπῶν ταῦτα λέγοντα, προστίθῃσι τὸ ὅτ' ἐμὲν οὕτως ὁρᾶν φησίν, ὅτ' ἐδὲ ταῖς ἀπορροαῖς ταῖς ἀπὸ τῶν ὁρωμένων ἀπορρεῖν τινά, ἃ προσπίπτοντα τῇ ὄψει, ὅταν ἐναρμόσῃ τοῖς ἐν αὐτῇ πόροις τῷ εἶναι σύμμετρα, εἴσω τε χωρεῖν καὶ οὕτως τὸ ὁρᾶν γίνεσθαι. ταύτης τῆς δόξης καὶ Πλάτων μνημονεύει ὡς οὕσης Ἐμπεδοκλέους ἐν Μένωνι (76c–d), καὶ ὀρίζεται κατὰ τὴν δόξαν τὴν ἐκείνου τὸ χρῶμα ἀπορροὴν σωμάτων ὄψει σύμμετρον καὶ αἰσθητήν. *in Sens.* 56.15–16 ἀλλὰ καὶ Ἐμπεδοκλῆς οὕτω (sc. εἶδωλα γὰρ τινὰ ὁμοιόμορφα ἀπὸ τῶν ὁρωμένων συνεχῶς ἀπορρέοντα καὶ ἐμπίπτοντα τῇ ὄψει) τὸ ὁρᾶν γίνεσθαι λέγει, ὡς πρὸ ὀλίγου ἐμνημόνευσεν.

Commentary

A Witnesses

There are two witnesses for this rather brief chapter, P, represented in various ways by P^B, P^G and P^Q, and S. As we pointed out above at ch. 4.8 Commentary A(1), for chs. 4.8 and following in Book 4 the direct tradition of S has incidentally only preserved lemmata concerned with Aristotle and Plato, but ch. 4.14 has no such lemmata. The whole chapter (assuming no lemmata are lost) is extant only in the Florentine florilegium. The contents and order of the four lemmata are the same in both witnesses, and there is no interpolation in S. It would seem that S copied out the chapter. Wachsmuth's bracketing of §4 ('videntur tamen antiquitus ex glossemate exorta'), even though he admits that it is also found in P, is strange. S will have copied it out although in his context such authorial comments are far from immediately relevant. See below, section D(d)§4.

B Proximate Tradition and Sources

(1) *Proximate tradition.* Of the few parallel *laudationes* of various views about the issue, the reference to Empedocles Democritus Epicurus in the fragment of a commentary on *Alcibiades*, extant in two papyrus fragments may derive from an earlier cousin of A. See *POxy 1609* at Adorno & alii, *CPF* (1992) 8–9, 148, esp. (2005) 55 (cited below at E(a)§§1–2), also to be consulted for further discussion of the tradition concerned with Plato's view of reflection. The rich literature on optics is only reflected in §3, and no names of real mathematicians are given (that of the honorary *ur*-mathematician Pythagoras has to suffice). No excerpts are given from Plato or Aristotle or Stoic literature (unless one wishes to include

these philosophers among the followers of Pythagoras, which will hardly do). The focus is upon Empedocles and the Atomists as opponents of the followers of Pythagoras and the mathematicians.

(2) *Sources*. Ultimately these will be the authors mentioned, via, presumably, literature pertaining to the conflict between images (§§1–2) and reflection of visual rays (§3). For the relation to ch. 4.13 see below, section D(a).

C Chapter Heading

The heading of P^B, of the umbrella type that dominates in the *Placita* (see above, ch. 1.3 Commentary C), is confirmed by that of P^Q, and by the second half of S's combined heading, extant in the index of Photius. P^G has abridged to Περὶ κατόπτρων.

As parallels in book titles we may mention Euclid's extant Κατοπτρικά (cf. *Opt.* §19.14 ὡς ἐν τοῖς Κατοπτρικοῖς λέγεται, *Opt.* rec. Theonis 176.18–19 τοῦτο γὰρ δέικνυται ἐν τοῖς Κατοπτρικοῖς) and Archimedes' lost Περὶ κατοπτρικῶν (fr. 17.5 Heiberg, καθὰ καὶ Ἀρχιμήδης ἐν τοῖς Περὶ κατοπτρικῶν ἀπέδειξεν). A book titled Κατοπτρικά is also attributed to Heron mechanicus (Damianus *Opt.* 14.5–6 ἀπέδειξε γὰρ ὁ μηχανικός Ἡρώων ἐν τοῖς αὐτοῦ Κατοπτρικοῖς), but this attribution is not accepted by Jones (2001) 149–151 for the extant Latin *De speculis* (ps.Ptolemy).

D Analysis

a Context

The chapter is the second of a cluster of three dealing with vision and two related issues, namely the production of mirror images and the visibility of darkness. For the connection between the treatment of vision and that of mirror images see above, ch. 4.13 at Commentary D(a). The link between vision and mirror images also appears on the lists of issues shared by philosophers with mathematicians that constitute a subpart of the Stoic *physikos logos* at Diogenes Laertius *VP.* 7.133; text below section E(a), General texts. It is explicitly emphasized in the final lemma of the present chapter.

b Number–Order of Lemmata

P and S have the same four lemmata, and both have them in the same order, accepted by Diels and us. Of these four lemmata the first three are concerned in the usual way with different positions concerned with the issue at hand, while the fourth is a rare example of an authorial remark. This lemma appositely concludes the chapter. The differences between the versions of P and S are minimal. P unsurprisingly leaves out a few name-labels: 'Leucippus' in §2, and 'mathematicians' in §3. The complicated technical nature of the catoptrics

involved in §§1–3 apparently precluded abridgement of content. The fact that this time S does not have more lemmata than P suggests that A's chapter survives complete, although the parallel account of Apuleius (cited below section E(b)§§1–2) contains more and in part different doxai. Seneca's account (cited *ibid.*) limits itself to the main diaphonia without citing name-labels, while Apuleius' provides more named lemmata than A, namely four to A's three. In part these are different: Stoics and Archytas instead of Empedocles. There can be no doubt that Apuleius' information too derives from a doxographical overview.

c Rationale–Structure of Chapter

There is an interesting difference between §2 on the one hand and §1 plus §3 on the other, as §2 is explicitly about seeing oneself in a mirror (a question of interest already e.g. at Plato *Alc.* I 162d–163c), while §1 and §3 are compatible with (also) seeing reflections of something else. The strong diaeresis is between effluences (ἀπόρροιαι, §1) or streams (ρεύματα, §1: sc. of effluences, see Diels *DG* index verborum s.v. ρεύμα) or images (εἰδῶλα, §2) on the one hand and optical reflection (ἀνάκλασις, §3) on the other. The ἀπόρροιαι and εἰδῶλα also occur in ch. 4.13, 'On vision, how we see'. Apart from ἀντανακλάσεις (P^B) or ἀνάκλασιν (S^L) in the present chapter the only other instances in Book 4 are at chs. 4.16.4 and 4.20.2, where ἀνακλάσθαι and ἀντανακλάται are not used of light but of sound. The substantive ἀνάκλασις and the verb ἀνακλᾶν are found somewhat more often in A Books 2 (chs. 2.20.12, 2.20.13, 2.30.2) and 3 (chs. 3.1.4, 3.2.2; no less than three times in the chapter on the rainbow, where refraction and reflection play an important part: chs. 3.5.3, 3.5.4, 3.5.5).

At ch. 4.13 Commentary D(a) above we have seen that reflection in mirrors or on similar smooth surfaces does not play a significant part in Aristotle's *De anima*. It is, however, an important feature in the *Meteorology* where both verb and noun are found quite often. See below, section D(d)§3. All three lemmata of our chapter are concerned with the process as a whole, namely with what leaves (indirectly) the seen object or the eye, with the contact with the mirror, and with the trajectory from the mirror to the visual organ. The differences are limited to the physical nature of the reflections (these, after all, are what the chapter is about). Thus, we have a diaeretic listing of, in succession, (§1): reflections in mirrors as effluences that come together (συνισταμένας) at the mirror's surface and are compressed by the fiery beam issuing from the mirror, which also takes along the air before it into which the streams (i.e. these effluences) are flowing; §2, the same as really subsisting images, which start from ourselves, come together (συνίστασθαι) at the mirror, turn back and make them-

selves manifest to us; and §3, the reflection of the visual beam, which stretches towards and strikes the smooth and hard bronze object, and is thrown back upon itself.

The final lemma comments on a further use to which one can put these lemmata, for each of them is also involved with 'how we see'. It is important further because it informs us that the term for lemma or paragraph is κεφάλαιον. See below, section D(d)§4.

d Further Comments

General Points

For mirrors see Mugler (1964), s.v. ἔνοπτρον, 146–147. Lejeune (1957) 4 writes: 'La catoptrique suppose expressément la théorie de la perception visuelle élaborée par l'optique. Elle est visiblement l'application, grace à une hypothèse supplémentaire féconde, des principes et des méthodes de l'optique proprement dite au cas des miroirs.'

Individual Points

§1 Diels *DG* 222, in his presentation of the (thin) evidence for the dependence of sections and lemmata of the *Placita* on Theophrastus' *De sensibus*, refers to this lemma as 'cum Empedoclea doctrina egregie consentiens'. But there is no precise Theophrastean parallel, only the already mentioned (above, section B(1)) *POxy* 1609 + *PPrinc inv. AM* 11224C, fr. A (which became available to scholars only later). Perhaps Diels had *Sens.* 7 in mind, 'colours are brought to our eyes by means of effluence' (ἀπορροήν). There is, of course, sufficient evidence for the theory of ἀπόρροιαι, e.g. Empedocles 31A89, 31A92 DK (Plato, *Men.* 76), Aristotle *Sens.* 2 438a4 after his quotation of 31B84 DK, and above ch. 4.13.12 (with section E(b) ad loc.).

Choosing between P's τελειούμενας and S's πιλούμενας is not easy, but πιλούμενας may perhaps be preferred because of a partial parallel in Theophrastus' account of Democritus' (not Empedocles') theory of vision, where it is the air between the eye and the object (not effluences or images) that is compressed by them (τὸν ἀέρα τὸν μεταξὺ τῆς ὀψεως καὶ τοῦ ὁρωμένου τυποῦσθαι συστελλόμενον ὑπὸ τοῦ ὁρωμένου καὶ τοῦ ὁρώντος, *Sens.* 50; cf. Burkert 1977, 100, rather than Avotins 1980, 434–444, who believes that *Ep.Hdt.* 49 κατὰ τὸ ἐναρμόττον μέγεθος εἰς τὴν ὄψιν ἢ τὴν διάνοιαν pertains to texture not size). According to Epicurus images are compressed by συνίησις so as to fit into the eye, *Nat.* fr. 23.43.11–13 Arrighetti; see also Alexander of Aphrodisias *de An.Mant.* 135.9–10, *pace* Sharples (2008) 189. For compression in this context cf. also Plato *Tim.* 45b συμπιλήσαντες. The fiery substance separated off from the mirror presumably is the returning fiery beam that originally came from the eye.

Q's very free paraphrase brings the lemma more in line with the two other lemmata.

§2 This compressed account, esp. the terse formula κατ' ἀντιπεριστροφὴν *ad finem*, can be supplemented by the passage from Lucretius quoted at section E(b)§2, which shows that the images 'by being flung back by incessant and unremitting repulsion give back a vision from the surface of mirrors'. Mugler (1964) 224 translates συνίστασθαι δὲ ἐπὶ τοῦ κατόπτρου κατ' ἀντιπεριστροφὴν as 'qui prennent de la consistance sur la surface du miroir par l'effet du flux opposé qui vient à leur rencontre et les enveloppe', which supplies too much. Torracca's 'da cui sono rimandati indietro' is better.

Faced with a multiplicity of textual variants (ὑποστάσεις, ἐπιστάσεις, ἐμφάσεις) and proposed emendations (ἐνστάσεις, ἀποστάσεις) we have opted for the παραστάσεις of ch. 5.2.1, where τῶν εἰδώλων παραστάσεις provides a good parallel and an uncontested idiom. But note that Koenen (1995) 49–52 argues in favour of ὑποστάσεις qua 'material *eidola*'.

§3 Pythagoras and his followers are mentioned *honoris causa* (cf. ch. 4.13.6, where the theory of the *mathematikos* i.e. astronomer Hipparchus is anticipated 'according to some' by Pythagoras and Parmenides): the theory involved is that of 'the mathematicians'. This connection with the preceding chapter has been missed by Webster (2018) 483, who seems to believe that a genuine early Pythagorean view is cited. For Hipparchus and mathematics see above, ch. 4.13 Commentary D(d)§5. The metaphor of bending the outstretched hand back to the shoulder recalls that of touching with the hands according to Hipparchus (and so of his purported predecessors) at A 4.13.5–6, and may be compared with the contact of the base of the visual cone with the object seen and that through the sense of touch by means of a stick according *SVF* 2.864–865 (cited below ch. 4.15 section E(b)§2). See above, ch. 4.13 Commentary D(d)§4.

The standard tenet of 'the mathematicians' concerned with the reflection of the optical rays does not play a part in Aristotle's *De anima*, but is frequently used in the *Meteorology*, as Alexander points out at *in Mete.* 141.3–142.20 (cf. ch. 3.5 'On the rainbow' above, Commentary D(d)§§4–6). The doxa may also be read as a much-reduced version of Plato's doctrine.

§4 This authorial remark is a sort of meta-lemma, specifying the use to which the various lemmata of this chapter may be put; cf. M–R 2.1.183–184. Thus it confirms and echoes the traditional relation between the treatment of vision and of mirror images, see above, ch. 4.13, Commentary B. Unfortunately Wachsmuth athetized it, perhaps because of the use of the same term in the title *Kephalaia gnostica* of the Byzantine authors Euagrius of Pontus and Maximus Confessor and in other similar titles. But the fact that the lemma occurs in both P and S is against this. The formula κεφαλαίους χρῆσασθαι (as

in S) is used in handbooks of rhetoric for the proper use of topics or issues or specific arguments, Aphthonius *Progymnasmata* 5.2.3 Patillon. Also κεφάλαιος χρήσθαι (as in P), ps.Dionysius of Halicarnassus *Ars rhetorica* 10.6.9–11 Radermacher–Usener, Sopater *Scholia ad Hermogenis status seu artem rhetoricam* 5.49.20 Walz, and in Hermias' comments on Plato's discussion of rhetoric, in *Phaedrum* 237.17–18. Philo uses the term κεφάλαια to refer to the Ten Commandments. Porphyry added κεφάλαια τῶν πάντων πλὴν τοῦ Περὶ τοῦ καλοῦ to his edition of the *Enneads*, thus elucidating the main points of the exposition (see D'Ancona 2012, 50–69). We have cited another Philo passage at section E(b)§4 for the meaning 'philosophical tenet'. A wonderfully apposite parallel is found in Geminus' abstract from Posidonius' *Meteorology* cited by Alexander who in his turn is cited by Simplicius (cited section E(b)§4). For such parallels see Méhat (1966) 121; cf. also Goulet-Cazé (1982) 315–321, where further literature is cited p. 319 n. 1. Four examples in *Ethical Doxography B* in S (attributed to AD) and two in the *Didascalicus* are listed at DG 76; see now *Ecl.* 2.7.5, p. 57.16; 5b5, p. 63.11, 63.12, 63.16; 7.12, p. 116.16; also *Ethical Doxography C*, *Ecl.* 2.7.26, pp. 148.1, 149.18, 150.1, 152.24.

e Other Evidence

Among the texts cited in the 'Materialien zur Geschichte der Farbenlehre, Historischer Teil, Erste Abteilung: Griechen', Goethe translated several lemmata of chs. 4.13–15, namely ch. 4.14.3 'Pythagoreer nach Plutarch' (adding 1.14.2 + 1.14.7), 4.14.1 'Empedokles—nach Plutarch' (preceded by A 1.14.3 'Empedokles nach Stobäus'), 4.13.1 + 4.14.1 'Democritus und Epicurus nach Plutarch', and 4.15.3 'Chrysippus nach Plutarch'.

Commentary

A *Witnesses*

We have two witnesses for this rather brief chapter, viz. P (represented in various ways by P^B, P^G and P^Q) and S^L, the Florentine florilegium, cf. above at ch. 4.8 Commentary A(1). Elsewhere the direct tradition of S has sometimes preserved paragraphs concerned with Aristotle and Plato, but ch. 4.15 has no such lemmata. For complications in the transmission of the tradition of P, which affects the text of L, see below, section D(b). We note that (in the context of this chapter) G preserves an illuminating phrase not paralleled elsewhere, see also below, section D(b). For comparable extra evidence in chapters of G see above, ch. 1.1, Commentary A.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* There are no parallel accounts presenting a comparable duality of detailed doxai. An interesting discussion of the visibility of darkness, but without name-labels, is found in Calcidius when commenting on *Tim.* 52b (cited below at section E(a), General texts). This passage ends with the statement that the eyes believe (*suspiciantur*) they see colours in the dark, and shares its general theme with the present chapter. Waszink ad loc. speaks of 'doctrina Peripatetica', basing this ascription on Aristotle's view of the potential presence of colour in the dark of ch. 1.15.10, though this potential presence is not

mentioned by Calcidius. As a parallel for this purported Peripatetic doctrine he refers to the visibility of darkness according to Sphaerus and Chrysippus, and refers to the present chapter.

Individual parallels that may be relevant have been collected at section E(b), among which one elsewhere in Calcidius for §2, namely at *in Tim.* 237, a brief account of the Stoic theory of vision without reference to darkness.

(2) *Sources.* Views on seeing in the dark and/or the visibility of darkness are already formulated by Plato, Aristotle, Theophrastus, and then by Lucretius; see below, section D(e). The views of Sphaerus and Chrysippus will derive from a Stoic handbook, or from a more general one also containing Stoic doctrine. Because only Stoic views are mentioned this chapter belongs with the exclusively Stoic chapters 4.11, 4.21 and 4.21.

C Chapter Heading

This is a very precise heading, concerned with the category of quality, and formulating a question to which the answer can be not only 'yes' or 'no', but also 'in certain respects'. For the dialectical aspect of the question word εἰ see above, ch. 1.1, Commentary C. The heading is extant in P (P^B, P^G and P^Q), but lacking in S^L. It is not paralleled elsewhere as a heading or title. For the few headings beginning with εἰ cf. chs. 4.2, 4.9, 4.20, 5.4, 5.5, and 5.15.

D Analysis

a Context

This chapter is the third of the trio dealing with vision and constitutes a sort of appendix discussing a traditional problem. Qua theme it is connected with ch. 1.15.9–10, which treat the visibility (or not) of colour in the dark.

b Number–Order of Lemmata

P^B and P^Q have two lemmata each. P^G has a single rather long lemma, the first part of which is the same as P^B's first and S^L's second lemma. Its second part, the sentence προέρχονται ... τὸ σκότος, rejected as a wilful addition of G by Diels, is not paralleled in the other witnesses, though the words §1[4–5] προέρχονται δὲ ἐκ τῆς ὀψέως ἀκτῖνες ὀμιχλώδεις are mirrored by the words §2[12–13] προχέονται δ' ἐκ τῆς ὀψέως ἀκτῖνες πύρινοι, οὐχὶ μέλαιναί καὶ ὀμιχλώδεις in S^L's third lemma (see also below). S^L has three lemmata, of which the first two are identical but for the name-labels, 'Sphaerus the Stoic' in S^L1, 'the Stoics' in S^L2. S^L2 is moreover identical with P1. P^BQ2 and S^L3 are identical. In 1997 we accepted the argument of Diels (1881) 250 that S2 has been interpolated in S^L from P^B (see M–R1. 267), so should be bracketed in S^L (as Wachsmuth has indeed done). We now believe that is perhaps more plausible that the first lemma was equipped with

variae lectiones at its beginning, viz. with ‘Sphaerus the Stoic’ and ‘the Stoics’ as alternatives. P chose ‘the Stoics’, whereas S wrote the lemma out twice, each time with a different name-label and with a shorter doxa the first time, thus preserving the name label Sphaerus, which in the *Placita* occurs only here.

The second part of G’s lemma is of particular interest. The discovery of the scanty remains of the Antinoopolis papyrus of P has shown that in several cases G, though diverging from P^B, preserves the (or an) original tradition of P; see M–R 1.127–130. The relegation by Diels of the words §1[4–9] *προέρχονται ... τὸ σκότος* to a doxographical limbo cannot be right, because the doctrine it promotes is to some extent squarely opposed to that of Chrysippus in the final lemma of P and S (which lemma, again, is lacking in G): a standard example of doxographical diaphonia. This would seem to be beyond G’s powers of invention. The ‘misty rays’ issuing from the eyes when it is dark are *explicitly contradicted* by the Chrysippean view in the next lemma according to which these rays are ‘fiery, not black and misty’. A connection there must be. Q’s surprising ‘not luminous (or fiery) rays’ at §2 *ad finem* seems to be a *Verschlimmbesserung* rather than a reminiscence of the ἀκτῖνες ὀμιχλώδεις preserved in G.

c Rationale–Structure of Chapter

The dominant Stoic doctrine of vision, i.e. that of Chrysippus, is found here instead of in ch. 4.13 ‘On vision’, because in the present chapter it allows for a diaphonia with the second part of §1, extant in P^G only. Compare, for instance, the postponed placement for the same reason of the Stoic definition of void (κενόν) not in ch. 1.18 but in ch. 1.20. The two lemmata are agreed that darkness is visible, but disagree as to the *modus quo*.

(§1) According to the doxa attributed to Zeno’s pupil Sphaerus some sort of beam proceeds from the visual organ into the darkness. With an implicit backwards reference to the epistemic theme of ch. 4.9.4 (‘the sensations are true’) it is pointed out that the ensuing perception of darkness is true. The visual organ sends out ‘misty rays’ at night, explaining that the darkness in a physical way exerts a negative but light a positive influence upon our visual rays. Light makes us see objects, darkness only darkness. So this theory, whatever its shortcomings, explains why we cannot see things in the dark.

(§2) with name-label Chrysippus provides elements of the standard Stoic theory of vision one would have expected to find in a lemma of ch. 4.13. It includes the mathematical visual cone (also attributed to Chrysippus elsewhere, see below, section E(b)§2) as defined in both recensions of the second proposition of Euclid’s *Optics*, ‘the figure enclosed by the visual rays is a cone having its apex at the eye and its base at the limits of the things seen’ (on this work see above, ch. 4.13, Commentary C(1)). But *ad fin.* the lemma adds

a sentence that states the contrary to §1: the rays are ‘not black or misty, but fiery’—i.e., normal, usual visual rays. Why we (unlike certain animals—but nothing, of course, was known about the *tapetum lucidum*) then only see darkness, not things, is not explained. We note that the comparison of the contact of the base of the cone and the object seen with contact by *touch* by means of a *stick*, found elsewhere in accounts of the Stoic doctrine of vision (see below, section E(b)§3 and above, ch. 4.13 Commentary D(d)§4) is absent.

d Further Comments

General Points

(1) The present quaestio, which excludes that we see anything but darkness itself when it is dark, is related to the more general and traditional issue concerned with the nocturnal vision of certain animals (and even some humans), explained in various ways by Presocratic thinkers (e.g. Democritus 68A157 attributed night vision to the owl through τὸ πυρῶδες τῶν ὀψέων), and criticized by Theophrastus in the *De sensibus*. Also note, however, that ‘to see darkness’ (cf. the heading of the chapter) is said of the blind, see Sophocles *OT* 419, Euripides *Phoen.* 377, *Bacch.* 510. The capacity to see in the dark could be explained by the fire in the eyes, or the visual ray or beam: according to the third proposition of Euclid’s *Optics* (cited below at section E(b)§3) objects are only visible when the visual rays fall upon them, which entails the problematic conclusion (cf. above, ch. 4.13 Commentary D(c), and below, individual points §1) that vision may be possible when darkness reigns.

‘Darkness visible’ (Milton, *PL* 1.63), as in the present chapter, helps explain Seneca *Ep.* 57.2 *non ut per tenebras videamus, sed ut ipsas*, just as the hypothetical ‘black rays’ (denied in §2) help explain Vergil *Aen.* 7.456–457 *atro lumine*, a phrase explained by Servius as ‘hellish light’; for fuller quotations see below, section E(b) General texts. Edgeworth (1983) may be right in assuming that Milton remembered Vergil’s expression.

(2) The verb προχέισθαι at §1[3], cf. §2[12] προχέονται varies the terminus technicus ἐκχέισθαι for the issuing of rays (ἄκτῖνες) from the eyes, see (as cited above, ch. 4.13 at section E(b) General texts) Euclid *Opt.* (rec. Theonis) p. 146.20, 152.1–3 etc., Cicero *Att.* 2.3.2, Heron *Def.* 135.11, Alexander of Aphrodisias in *Mete.* 141.6–7, and Plotinus *Enn.* 4.5[29]2.8–13; compare ch. 4.13.10 κατὰ τι(νων ἀκ)τίνων ἔκχυσιν. We assume that §1[4] προέρχονται, not paralleled elsewhere for the issuing of rays, is a *variatio* for προχέονται and not an (in itself easily comprehensible) misreading.

Individual Points

§1 The tenet may be seen as someone's reply to Aristotle's criticism of Empedocles' and of Plato's theory of vision (in the *Timaeus*). See the pertinent objection of Aristotle *Sens.* 2 437b11–14 (Greek text at section E(b) General texts): 'if it (sc. the visual beam) were fire, as Empedocles (31A91) posits and has been written in the *Timaeus* (45c), and if in fact vision should occur when light issues from the eye as from a lamp, why then should vision not be equally possible in the dark?' The answer given to this query in §1 is that what issues is not pure light, but light that has been troubled and obstructed by the conditions obtaining at night, so that it fails to reach the objects. Galen speaks of visual *pneumata* of different quality, e.g. pure as the aether, or opaque in the manner of mist (θολερὸν ὁμίχλης δίκην—cf. the ἀκτῖνες ὁμιχλώδεις); see *De symptomaton causis* 7.98.7–17 K., somewhat cavalierly printed as *SVF* 2.870 by Von Arnim.

§2 For the difficulties involved with the not always consistent evidence for the standard Stoic theory see Hahm (1978) 65–69. Ingenkamp (1971) argues that the fiery rays issuing from the eyes are a doxographical misunderstanding, but this suggestion is contradicted by the evidence about the misty rays in §2. Even so, both positions may have been adapted the better to suit a discussion.

The close parallel of this paragraph with Diogenes Laertius *V.P.* 7.157 (cited below section E(a)§2) was noticed by Von Arnim, who prints §2 as *SVF* 2.866 and the Diogenes passage as *SVF* 2.867.

e Other Evidence

Plato in his discussion of vision *Tim.* 45d briefly speaks of what happens at night: the visual ray no longer blends with the outside air since this has lost its fire, hence sight is no longer possible. Aristotle argues that darkness is *invisible* though the visual faculty also distinguishes darkness, but 'in another way', *de An.* 2.10 422a20–21 and 3.2 425b20–22, cited at section E(b) General texts. Compare Alexander *de An.* 52.14 τοῦ γὰρ σκούτου οὐκ ἄλλη τις ἢ ὄψις ἐστὶ κριτικῇ. Theophrastus is less sure, see fr. 278.19–21 FHS&G at Priscianus Lydus *Metaphr. in Theophr.* 10.3–5 'but if darkness is seen without light, light will not be the cause of being seen for all things, or else darkness itself is not visible, as Theophrastus infers'. Epicurus mentions 'darkness-like air' as to some extent an obstacle to vision, fr. 29 Usener at Plutarch *Adv.Col.* 1110C–D. Lucretius *DRN* 2.746 speaks of *caecis ... tenebris*, and 4.337–352 describes darkness as 'the black air of darkness' (the opposite of 'bright clear air' and 'light') which fills the eye; cf. Giussani ad loc. 'per Lucrezio ... l'oscurità è un qualche cosa di positivo, un fluido', and Bailey ad loc.; see further below section E(b) General texts.

Commentary

A Witnesses

There are two witnesses, P (represented in various ways by P^B, P^G and P^Q), and S. Both have four lemmata in the same order, so for all we know the chapter may be complete. S's lemmata except 16.4 (Plato c.s.) are again extant only in S^L, the Florentine compendium, cf. above, ch. 4.8 Commentary A(1).

B Proximate Tradition and Sources

(1) *Proximate tradition.* There is virtually no proximate tradition. The cousin writing *Nem NH* c. 10 is very different. There is also an excerpt of §2 in *Psellus*,

who in compiling his chapter on the five senses made excerpts from chs. 4.13 and 4.16–19.

(2) *Sources*. Diels *DG* 222–223 and Ax (1986) 80–81 discuss the parallels in Theophrastus *De sensibus*. What is important, as Ax points out, is that Theophrastean antecedents (name-label plus a doxa) are extant for all four lemmata; see further below, section D(d) and passages cited in section E(b) §§1–4. Aristotle provides the general information *de An.* 2.8 420a18–19 that ‘they say we hear by means of something which is void [cf. §2] and resonant, because we hear by that which has the air enclosed in it [cf. §§3–4]’, and further tells us *PA* 2.10 656b13–16 that ‘what is called empty is filled with air’ (see below, section E(b) *General texts*). That the lemmata have been modified in the course of transmission, or are somewhat garbled, is not surprising. Although this evidence is insufficient to ground Diels’ grand hypothesis of the ‘Theophrasteum fundamentum’ of the older parts of the *Placita*, it is clear that in some cases material has been incorporated that was conveniently available in the *De sensibus*.

C Chapter Heading

Found in all witnesses, and in Nem. The umbrella formula that dominates in the *Placita* (see above, ch. 1.3 Commentary C) here covers the question type of cause (διὰ τῆ) and the category of place. The heading in S, though missing in the main tradition, is confirmed by Photius and the index of S^L. The formula περὶ ἄκοῆς indicating the subject to be treated is paralleled e.g. at ps.Aristotle *MM* 1.21.2 and Theophrastus *Sens.* 5.

D Analysis

a Context

Hearing is the second of the senses to be treated, and is (in accordance with the tradition) located after ch. 4.13, sight (plus chs. 4.14 mirror images and 4.15 darkness), and before ch. 4.17, smell, and ch. 4.18, taste: the same order as Aristotle’s in *de An.* 2.7–10. (Touch, as we noted at ch. 4.13, Commentary D(a) above, is absent.) The chapter on voice or sound (φωνή), a theme that in other sources, e.g. Aristotle *de An.* 2.8, is often treated together with hearing and could very well have been placed immediately after ch. 4.16, is here located after the cluster of chapters on the senses, viz. at ch. 4.19 (and followed by a chapter on the corporeality of voice, ch. 4.20).

b Number–Order of Lemmata

All our witnesses have four lemmata, and all in the same order, which there is thus no reason to change.

c Rationale–Structure of Chapter

The diaeresis opposes what is outside to what is inside, and what is full to what is empty. It lists in succession: §1 a view according to which hearing is caused by (outside) *pneuma* striking against a specific little body inside the ear which rings like a bell; §2 one according to which this *pneuma* enters an empty space inside the ear which then resounds; §3 one according to which the inside ear is (not empty but) filled with air that is struck and moved by the sound; and §4 one which likewise speaks of air that is struck, explicitly inside the head (not the ear), which is reflected to the ‘regent parts’ (note the plural), and thus the sensation of hearing comes about. The opposition between ‘inside the ear’ and ‘inside the head’ is hardly a strong one. That between an inside ear or head filled with air (§§3–4) and an inside ear that is empty (§2) seems stronger, but it should be noted that according to some authorities ‘empty’ is equivalent to ‘filled with air’. There is an appreciable opposition between an inside ear equipped with a specific hearing aid (§1) and one that is empty (§2) or filled with air (§§3–4). Laks (2007) 45–48, discussing the whole chapter, gives a good account of oppositions and commonalities; note esp. his diaeretic scheme at *ibid.* 50.

Though we may have the complete Aëtian chapter (see above, section A), its information about views about hearing is far from complete: we miss, for instance, those of Democritus, Aristotle and the Stoics.

d Further Comments

Individual Points

§1 Diels *DG* 222 notes the resemblance between §1 and Theophrastus *Sens.* 9 (‘convenire videntur, sed cum misere haec corrupta sint, ascribere nolo’); Ax rightly argues that (*pace* Diels) the Empedocles lemma differs from the passages in Theophrastus more as to wording than content. Baltussen (1993) 218 moreover points at the presence of the bell, κῶδων, in both texts.

§2 Diels also notes the resemblance between §2 and Theophrastus *Sens.* 25 (‘optime consentiunt’); Ax agrees. Note however that A turns Theophrastus’ description of a particular phenomenon: ‘it reverberates (for it produces sound by being hollow)’, into a general statement: ‘all hollow spaces reverberate’; cf. ps.Aristotle *Probl.* 21 (“Ὅσα περὶ φωνῆς) 7 899b33 καὶ γὰρ τὰ κοῖλα μᾶλλον ἤχει).

§3 Diels is optimistic about the resemblance between §3 and Theophrastus *Sens.* 40–41 (‘bene respondet’), but the Diogenes lemma in Ax’s view is much less close to Theophrastus’ version than Diels believed; similarly Baltussen (1993) 220. Laks (2008) 165 points out that ‘des trois airs qui interviennent dans le processus de l’audition [namely in Theophrastus], le doxographe ne retient

que les deux extrêmes, le son et l'air cervical'. However, one notes that the doxographer's addition of 'sound' is most helpful.

§4 Plato's definition of hearing—not mentioned by Diels—according to Ax is suggested 'vage und dazu mit fremder Begrifflichkeit' (sc. τὰ ἡγεμονικά). Baltussen (2000a) 233 speaks of 'a muddled simplification'. In *Tim.* 67b (cf. Alcinous *Did.* c. 19, p. 174.2 H.) the recipient of the auditory sensation is the liver. The plural τὰ ἡγεμονικά is probably short for τὴν αἰσθησιν καὶ τὸ ἡγεμονικόν (ch. 4.18.2[6]). Also compare Nem *NH* c. 6, p. 57.7–10 τῶν δὲ ψυχικῶν τὰ μὲν ἐστὶν ὑπουργικά τε καὶ δορυφορικά, τὰ δὲ ἀρχικά καὶ ἡγεμονικά· ἀρχικά μὲν τὸ τε διανοητικόν καὶ τὸ ἐπιστημονικόν, ὑπουργικά δὲ τὰ αἰσθητικά καὶ ἡ καθ' ὁρμὴν κίνησις καὶ τὸ φανταστικόν, and the passages of Ptolemy cited at ch. 4.5 section E(b)§14.

e Other Evidence

The other evidence of interest is found in Theophrastus *De sensibus*; see above at section B.

Commentary

A *Witnesses*

There are two witnesses, P, represented in various ways by P^B, P^G and P^Q, and S, that is, entirely S^L. Because there is no lemma on Plato or Aristotle, the other Stobaeian manuscripts deleted the entire chapter (cf. above, ch. 4.8 Commentary A(1)). Both P and S^L have two lemmata, so the bilemmatic chapter may well be complete, though we cannot be sure.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* There is virtually no proximate tradition, but the parallel in ps.Galen *Definitiones medicae* is interesting in view of the importance of this collection of definitions in relation to Book 5. The ‘cousin writing’ Nem NH c. 11 has a (sub-)title which is the same, but the contents are very different. There is also an excerpt of §2 in Psellus *Omn.Doctr.* 81, who made excerpts from chs. 4.13 and 4.16–19.

(2) *Sources.* As in the case of ch. 4.16, Diels DG 222–223 notes the parallels in Theophrastus *De sensibus*. We may add that the remark about the effects of a common cold echoes Theophrastus’ criticism (*Sens.* 21), but turns it into a piece of positive doctrine. What is important is that Theophrasteian antecedents (name-label plus doxa) are extant for both lemmata, see below, section D(d). Nothing comparable is found in Aristotle, apart from the general remark *Sens.* 5 444a17–19 that ‘smell is conveyed by inhalation’ (cited below, section E(b) General texts). That the lemmata have been modified in the course of transmission is not surprising. Although this evidence is insufficient to ground Diels’ grand hypothesis of the ‘Theophrasteum fundamentum’ of the older parts of the *Placita*, it is clear that here too material is incorporated that was conveniently available in the *De sensibus*, though the selection for this topic is far from representative: Anaxagoras (*Sens.* 30) and Diogenes (*Sens.* 39–41) are absent. And we of course also note the absence of the views of Plato and Aristotle.

C *Chapter Heading*

Found in all witnesses and Nem. The standard umbrella formula (see above, ch. 1.3 Commentary C) covers the question type of cause (διὰ τῆ) and the cat-

egory of place. It is paralleled e.g. at Aristotle *HA* 4.8 533a22, ps.Aristotle *MM* 1.21.2, and as part of a book title Galen *Libr.Prop.* 19.30.2 K. Περὶ ὁσφρήσεως καὶ πόθεν ἄρχεται τὸ αἰσθητήριον αὐτῆς (*De instrumento odoratus*).

D Analysis

a Context

Smell is the third of the senses to be treated, after ch. 4.13, sight (plus chs. 4.14 mirror images and 4.15 darkness) and ch. 4.16, hearing, and before ch. 4.18, taste. See further above ch. 4.13, at Commentary D(a).

b Number–Order of Lemmata

All our witnesses have two lemmata, and all in the same order which there is no reason to change.

c Rationale–Structure of Chapter

The two lemmata do not provide a strong contrast. In both cases breathing is needed for smelling. According to §1 it is the brain that smells, while no such organ is mentioned in §2: a weak diaphonia.

d Further Comments

Individual Points

§1 The central function of the Alcmaeonian brain is also found in other sources concerning the Crotoniate, esp. Theophrastus *De sensibus*, and paralleled at ch. 5.3.3 for which no antecedent in Theophrastus is extant. The attribution of a ἡγεμονικόν is of course a matter of later terminology. Diels *DG* 223, stating in general that ‘Alcmaeonis placita optime consentiunt’, when comparing *Sens.* 25 and §1 by means of a tabular quotation still calls the use of this term Stoic: ‘sed ne Stoicorum accommodationem desideres haec mihi confer’; cf. below, ch. 4.18, Commentary B.

§2 Diels *DG* 222 is positive about the connection between §2 and Theophrastus *Sens.* 21–22. We may add that the view expressed in the Empedocles lemma apparently presupposes that the organ of perception of smells is the ἡγεμονικόν in the blood (cf. ch. 4.5.9).

e Further Evidence

The other evidence of interest is found in Theophrastus *De sensibus*; see above at section B.

Commentary

A *Witnesses*

The only witness for the text is P, represented in various ways by P^B, P^G and P^Q. Unfortunately because of the vagaries of transmission S^L does not preserve the text of the lemmata and the main mss. for S preserve only a brief extract from AD on Aristotle and an extended quote from Plato's *Timaeus*. The heading is also attested in S^L and Photius' index; in the latter it precedes those for touch and smell, but we follow P. Since only P and his tradition are extant, one cannot exclude that there may have been a bit more material. But for the quadrilemmatic ch. 4.16 and the equally bilemmatic ch. 4.17 both P and S are extant, and there is no difference between these two sources as to the number of paragraphs, so for ch. 4.18 there may have been no more in S as well.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* There is virtually no proximate tradition. There are echoes of the same ideas in cousin writing *Nem NH* ch. 9, but his chapter as a whole is very different and much more detailed. There is also an excerpt of §2 in Psellus, who as noted before made excerpts from chs. 4.13 and 4.16–19 as he found them in his copy of P.

(2) *Sources.* Diels *DG* 223 notes the resemblance between §1 and Theophrastus *Sens.* 25 ('concordant'). He also notes the resemblance between §2 and *Sens.* 43 ('apta sunt Theophrasteis'), though he dislikes τὸ ἡγεμονικόν, which (just as in ch. 4.17.1, where see Commentary D(d)§1) he believes reveals an unwelcome Stoic influence. But the term simply became part of the philosophical *koine*. What is of some importance is that Theophrastean antecedents (namely, name-label plus doxa) are extant for both lemmata. §1 is indeed not far from Theophrastus, but §2 is more different. Nothing comparable is found

in Aristotle, apart from the general remark *de An.* 2.10 422a17–18 that ‘nothing can produce a perception of a taste without moisture’ (cited below section E(b) General texts). However, if a doxa for Democritus had been included and survived, things could have been different in view of Aristotle’s criticisms of Democritus (and others) at *Sens.* 4 442a29 ff. That the lemmata have been modified in the course of transmission is not surprising.

C Chapter Heading

Found in all representatives of P and Nem. The standard umbrella formula (see above, ch. 1.3 Commentary C) *περί γεύσεως* here covers the question type of cause (*διὰ τι*) and the category of place. It is paralleled Aristotle *de An.* 2.7 419a30, *HA* 4.8 534b29, Theophrastus *Sens.* 6 and 9, and Plutarch *Adv.Col.* 1121B.

D Analysis

a Context

Taste is the fourth and last of the (five) senses to be treated, after chs. 4.13, sight (plus 4.14 mirror images and 4.15 darkness), 4.16, hearing, and 4.17, smell. Touch, as we have noticed, is absent. Cf. above ch. 4.13, at Commentary D(a).

b Number–Order of Lemmata

The representatives of our single source P all have two lemmata, and in the same order which it does not make sense to modify. As noted above in section A, it is not impossible that there originally were more lemmata, but we can only base our text on what is preserved in P. Note that the absence—through haplography from *-ότητι* to *-ότητι*—of the last words of §1 and of the first of §2 in ms. P^{B(I)} has created a new Alcmaeon lemma in this representative of the tradition through loss of the name-label Diogenes. If we did not have other representatives of P^B, we would have to depend on P^G and P^Q for the correct text. Compare what happened in the entire extant tradition of P, viz. P^{BQ} (P^G is here absent), at ch. 4.7.1–2, where we are saved by the text of T.

c Rationale–Structure of Chapter

The two lemmata do not provide a strong contrast. In both paragraphs taste is made possible by the structure and composition of the tongue. In §1 we are not told that it is the regent part (brain) that perceives, but perhaps the Alcmaeonian *ἡγεμονικόν ... ἐν τῷ ἐγκεφάλῳ* has to be added mentally from the first lemma of the previous chapter. If not, there is a contrast between the two paragraphs in that the first fails to refer to the perceiving regent part, while the second in fact does so: *ἐπὶ τὴν αἴσθησιν καὶ τὸ ἡγεμονικόν*. Again, in §2 we are not told where the regent part is to be found, though we need not believe that it is in the brain

(in Diogenes of Apollonia the air which perceives and thinks is located in the whole body, cf. Laks 2008, 166–167). This amounts to an implicit diaphonia, if we are right in admitting the possibility that the brain of A 4.17.1 is still in some way present.

d Further Comments

General Points

For the relation with Theophrastus *De sensibus* see above at section B.

e Other Evidence

The other evidence of interest is found in Theophrastus *De sensibus*, see above at section B.

Commentary

A *Witnesses*

There are two witnesses, P, represented in various ways by P^B, P^G, P^Q; and S, for the heading and the Plato lemma together with the definitions at §§1–3. Even in the Florentine florilegium the larger part of the text is absent. There are five lemmata in P^B, of which three remain in P^G. S *Ecl.* 1.57 has combined the headings of the three chapters 4.19–4.21, cf. below ch. 4.20 Commentary A, and ch. 4.21 Commentary C.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* Ps.Galen's *Definitiones medicae* (cf. above, ch. 4.17, Commentary B) is rather early, but for the most part the proximate tradition is late. As to its wider ramifications, it is noteworthy that Lactantius *Op.D.* 15.1 explicitly ascribes the definition of voice as air that has been struck (§1) to both philosophers and *grammarians*. See further the important passages from the *Commentaria on Dionysius Thrax*, deriving from late Neoplatonist school practice, quoted at section E(a)§1 (cf. also below, ch. 4.20 at Commentary B). The surprising tenacity of the tradition here is similar to that pertaining to the proem of the work; see above, Book 1.titulus et index, Commentary D(c). The Democritus lemma (§5) so closely corresponds to a passage in Sextus Empiricus that they must go back to a common tradition.

(2) *Sources.* The chapter appears to have been derived from very good source material. The Platonic material (§1) goes back to passages in the dialogues or further developments spun out of these, and §§2–3 contain parallels to influential views of the grammarians Seleucus and Philoxenus, both first cent. CE, so more or less contemporary with A. The Epicurean doxa (§4) is in part based upon a passage in the *Letter to Herodotus* (close verbal parallels). The Stoa lemma (§5), again, is closely parallel to the authoritative treatment of the subject in the physical section of the doxography of Diogenes Laertius *V.P.* Book 7 (not noticed by Von Arnim, who prints A 4.19.4 as *SVF* 2.425 and the Diogenes passage as *SVF* 2.872). Apparently special care was lavished on the present chapter, or it was shielded from further abridgement in P. The subject continued to be important, as is clear from the reverberations in the late *Commentaria on Dionysius Thrax*.

C *Chapter Heading*

Of the standard umbrella type περι τοῦ δεῖναι, see above, ch. 1.3 Commentary C. It is paralleled as e.g. a formula referring to a subject or question in Aristotle, in the Aristotelian *Problemata*, in Stoic dialectic, in grammarians, and as head-

ing of a chapter in Oribasius *Coll.Med.* 62. As a book title it is known as that of Galen's lost treatise Περὶ φωνῆς, numerous references to which are found in his œuvre. The question types concerned are those of cause and substance, while the categories of place and action and passion also play a part.

D Analysis

a Context

The chapter follows on after chs. 4.13–18 dealing with the senses (touch omitted) and particular phenomena related to some among them. A position that is perhaps equally appropriate would have been immediately after ch. 4.16, 'On hearing'. Plato *Tim.* 47cd and 67bc (followed by Theophrastus *Sens.* 6) deals with voice and hearing simultaneously, as does Aristotle in his chapter on the sense of hearing, *de An.* 2.8 419b4–421b6. Lucretius too discusses hearing and voice together, *DRN* 4.524–579. But according to the standard Stoic theory voice (like hearing) is a separate part of the soul (see ch. 4.4.2 etc.), which presumably is why it gets a separate chapter here, cf. M–R 2.1.146–147. Ch. 4.19 is continued by ch. 4.20, which deals with the issue of the corporeality of voice and the origin of its echo. The former a bit surprisingly is not an explicit issue in the present chapter, where voice is corporeal in all the doxai. The postponement of an exposition of the diaphonia is a sign that A (somewhat atypically) does not give equal weight to the two opposite sides. Note that the origin of the echo (apparently prepared by ἡχοῦντων in §2) is already mentioned in the final lemma of ch. 4.19, which makes for a smooth connection with the long title and second lemma of ch. 4.20.

b Number–Order of Lemmata

Of the five lemmata in P^B and P^Q only three are found in P^G, in the same relative order. In S and his tradition only the heading and §§1–3 are extant. There is no reason for interfering with the order as transmitted in P. The difference between Epicurus (§4) and Democritus (§5) is that Democritus includes air, just as the Stoics (§6) and Anaxagoras (§7), so Democritus is closer to the latter two. This explains the unchronological lemmata order, §5 following after §4. The Plato lemma (§1) is first because it contains a definition; see below.

c Rationale–Structure of Chapter

Voice is presented not only as produced by a speaker or some other sort of source, but also as received, heard (φωνή also means 'sound'). A consequence of this is that what in the original sources was formulated primarily as pertaining to spoken or thought *logos* (Plato *Tht.* 206d, *Sph.* 263e), or to hearing (*Tim.* 67b), has been rephrased and rearranged to suit a focus on, or heading per-

taining to, voice. For a drastic example of this reorganization see Alcinous *Did.* c. 19, p. 173.42–174.4 H., cited section E(b)§1. See Ingenkamp (1966) 80, and Ax (1986) 78–79, who aptly speaks of *Umlemmatisierung*, or ‘placing under a different heading’, but whose claim that in ch. 4.19 φωνή denotes ‘voice’ alone, and not (καταχρηστικῶς) also ‘sound’ in general, we cannot follow. But the Stoic doctrine of hearing is indeed found in the present chapter and not in ch. 4.16, see below, section D(d)§4. The distribution of voice/sound and hearing over two separate chapters in the *Placita* (namely chs. 4.16 and 4.19) is in tune with a scholastic practice we have encountered more often.

Ch. 4.20 provides a diaphonia of doxai pertaining to the incorporeality versus the corporeality of voice. According to the doxai of the present chapter, however, voice is corporeal: *pneuma* in §1 Plato and (apparently) in the two clarifying remarks that follow; a stream of various small particles of the same shape in §4 Epicurus; air corpuscles plus small particles in §5 Democritus; continuous air struck by *pneuma* in Stoicism §6; *pneuma* returned by the air it has struck in §7 Anaxagoras.

It is not always easy to establish the structure of a chapter that is mainly extant in P. Here the main diaeresis/diaphonia is between the discrete substrate of the Atomists (§§4–5) and the continuous substrate of the Stoics (§6). We note the identical formulas εἰς ὁμοιοσχήμονα θρύπτεσθαι θράυσματα (both §4 and §5), which are opposed to μὴ συγκεῖσθαι ἐκ θραυσμάτων (§6). The similar wording plus the negation strongly highlight the contrast. The tenets of Plato (§1) and Anaxagoras (§7) at beginning and end, both of which speak of *pneuma*, lie outside this diaeresis. This explains the final position of the Anaxagoras lemma, since exceptional lemmata, or those that fail to fit the diaeresis of a chapter, are as a rule found *ad finem*, see e.g. A at P 2.2, 2.14, 3.9, and M–R 2.1.9, 2.1.12, 3.228–229, etc. But it does not explain the position of the Plato lemma *ad initium*. The most probable explanation is that this lemma provides an explicit definition of the essence. Also elsewhere in the *Placita* definitions (both nominal and essential ones) are found at the beginning of chapters, though as a rule without name-label; see chs. 1.6.1, 1.9.1, 1.10.1, 1.11.1, 1.12.1, 1.14.1, 1.15.1, 2.1.1, 2.32.1, 3.1.1, 4.8.1, and 5.29.1, and esp. ch. 1.9 at Commentary D(d).

A weaker diaphonia is that between Epicurus (§4), who does not mention air, and the others, who do.

d Further Comments

General Points

Though ‘breath’ (*pneuma*) functions in the Plato’s first definition in §1, we are not informed about the production of voice and the role of respiration and the function of the trachea, and have to wait for ch. 4.21 1.[15–19].

Individual Points

§§1–3 (1) While §1 is derived from passages in Plato (as we have seen §2 is ascribed to grammarians, too), §§2–3 are different, as Diels already pointed out *ad loc.* They are widely paralleled in grammatical literature. Wachsmuth appropriately gave them their own separate lemma. The antithesis between *καταχρηστικῶς* ('by analogy', 'metaphorically', 'by extension') and *κυρίως* ('in the proper sense') is not paralleled before the first cent. BCE, in the grammarian Trypho, e.g. *Περὶ τρῶπων* 192.21–24, and Philo of Alexandria, e.g. *Leg.* 2.10. For these definitions see also Mansfeld (2005b).

(2) Note that at §1[2] the Stoic *πνεῦμα* replaces the *ῥεῦμα* of Plato *Sph.* 263e (echoed ps.Plato *Def.* 414d); cf. *Th.* 206d *ῥοή*, *Tim.* 75e *λόγων νᾶμα ἔξω ῥέον*. One is tempted to conjecture *ῥεῦμα*, because then both Plato (§1) and Epicurus (§4) would speak of *ῥεῦμα*. This would make the structure of the chapter clearer, while from the point of view of the original source *nihil obstat*. Against this change, of course, is the unanimous textual tradition. But that in the course of transmission a Platonic *ῥεῦμα* was supplanted by a Stoicizing *πνεῦμα* is virtually certain.

(3) Ax (1986) 81 argues that there is no reference to *ἀκοή* in the present lemma, but misses the implication of the phrase §1[3] *δι' ὧτων*. *Ibid.* p. 78 he argues that these words were added by the doxographer, although they are already found in both Theophrastus and Plato.

(4) In spite of the shared term *ὀρίζεται* the definition in §1 is quite different from Theophrastus' introductory words at *Sens.* 6, cited section E(b)§2. But *πληγὴν ... ψυχῆς* in §1[3–4] is very close to Theophrastus, who himself excerpted Plato very carefully, although he seems to give 'the erroneous impression that Plato takes hearing ... to be *itself a sound*' (Long 1996c, 352, his emphasis). What in the original sources was formulated primarily as pertaining to *logos* or hearing, has been rephrased to suit a focus, or heading, pertaining to voice/sound; see at section D(c) above. This already happened in Theophrastus.

§3 For 'voice' as 'illuminating what is thought' see Mansfeld (2005b). This idea helps explain the Stoic view that also the first case of the noun, i.e. the spoken or even written word in a particular shape, is a 'fall' or *ptosis*, since it has 'fallen from the concept in the soul' (*SVF* 2.164, cited section E(b)§3).

Sprache der Griechen: cf. chs. 1.8 (heading), 2.1.1[2], 3.7.2[6], 4.11.1[17], and 4.12.1[9]. The etymology of *φωνή* 'sound' from *φῶς* 'light' has to be explained to his public, since no connection is present in Arabic between the words for 'sound' and 'light'.

§4 The Epicurus doxa includes both animals and things.

§5 The quotation of the Homeric line is paralleled in Plato and Aristotle, that of the proverb in Aristotle, but they are not found in the parallel passage

in Sextus Empiricus; see section E(b)§5. This is not the place to inquire into the ultimate origin of this combination (further illustrative quotes are found in both Aristotle and Plato). Either Sextus Empiricus (or the tradition on which he depends) eliminated these proof texts, or A or the tradition on which he depends added them. If the latter, the Democritean view was contaminated with what is in Aristotle (and Plato). If the former, one might hypothesize that all three philosophers depend on an earlier anthology of parallel ideas, which Democritus further developed by the empirical examples of similar stones and grains that aptly illustrate atomic motions.

The dialectical objection at the end of the lemma is an important reminder of one of the aims and uses of *placita*. Explicit examples in the *Placita* itself are rare: see chs. 1.2.2, 1.3.2–4, 1.5.3, and 1.7.7; M–R 2.1.32, 2.1.71, and 2.72 n. 149. Note the plural ‘to those’, while the lemma has only one name-label: a shift to Democritus’ purported followers in the didactic context. Perhaps it is also generalised to those who hold this view.

§6 This doxa about hearing is not found in its proper chapter (4.16) but in the chapter ‘On voice’ (*Umlemmatisierung*). On rearrangement as a characteristic of epitomatization see Opelt (1962) 961. The passage in the physics section at Diogenes Laertius *V.P.* 7.158 is exactly, and virtually verbatim, parallel.

§7 The theme of the concluding phrase anticipates the second lemma of the next chapter, itself announced in the second part of the heading of that chapter. The difference in name-labels between P^{BQ} (Anaximander) and P^G (Anaxagoras) is almost certainly due to the use of abbreviations, as at Diogenes Laertius *V.P.* 8.70, where Ἀναξαγόρου has been restored (by Gigante) for mss. ἀναξιμανδρου on the basis of *V.P.* 8.56. Tiziano Dorandi informs us (*per litt.*, we translate from the Italian) why in his edition of Diogenes Laertius he has preserved the ἀναξιμανδρου of the manuscripts (with Diels *PPF* and *Vors.* and with the *Nachlass* of v. d. Muehl). This decision depends on my editorial criteria: the mistake may go back to Diogenes Laertius himself, who may have erred in transcribing his source (or the error may already have been in the source). In an edition of one of the philosophers in question I would write (at least in the apparatus) something like ἀναξιμανδρου codd. D.L., lege Ἀναξαγόρου. In Diogenes Laertius *V.P.* 2.17 the same doxa in a simplified form, i.e. ‘that the impact of air is the origin of voice’, is said to have been stated first by Archelaus, another Presocratic whose name begins with the letter A (and who is also Anaxagoras’ pupil). We for our part have made the appropriate choice in favour of G, since we are trying to reconstruct A.

e Other Evidence

Aristotle *de An.* 2.8 and ps.Aristotle *Probl.* Book 11 deal with the topic of φωνή. Xenocrates as reported by Porphyry and the majority of the (later) Stoics as reported in Diogenes Laertius *V.P.* 7.55 began their exposition of dialectic with a discussion of φωνή. These authorities were followed by the grammarians, who introduce their account of grammar with one of φωνή. The collection of definitions by a certain Aquilius (second cent. CE?) edited by Rashed begins with one, or rather two, definitions of φωνή, see Rashed (2012) 136.

Commentary

A *Witnesses*

The witnesses are P, variously represented by P^B, P^G and P^C, as well as S, the latter for the second part of the heading only. In S, contrary to what happened elsewhere, the lemma Plato/Aristotle was excised by the epitomators, perhaps because its name-labels started with Pythagoras. S *Ecl.* 1.57 has combined the headings of the three chapters 4.19–4.21, cf. above ch. 4.20 Commentary A, and below ch. 4.21 Commentary C.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* A more detailed doxographical overview is found in Aulus Gellius, who cites the Stoics and uses proper Stoic terminology. Another extension of the proximate tradition is late, just as is the case with the previous

chapter, cf. ch. 4.19 at Commentary B; see the passages from the *Commentaria on Dionysius Thrax* and other grammatical literature, quoted at section E(a) General texts below.

(2) *Sources*. The sources for §1 appear to be works of early Peripatetics represented by Theophrastus, ps.Aristotle *De audiendo*, and Strato, see the passages cited at section E(b)§1. The Stoic sources are not clear, but do not seem to be inferior to those for chs. 4.11–12 and 4.21.

C Chapter Heading

The long and specific heading, including the reference to the echo, is found in all representatives of P. Whether S had a somewhat shorter version, namely Εἰ ἀσώματος ἢ φωνῆς, or whether something disappeared in the lacuna which included the second part of the heading is unclear. Since we strive to maximize the evidence we have opted for the longer version. For headings beginning with εἰ cf. chs. 4.2, 4.9, 4.15, 5.4, 5.5, and 5.15, and cf. above, ch. 1.1 Commentary C on the dialectical aspect of the interrogative particle.

D Analysis

a Context

The chapter follows on after ch. 4.19, ‘On voice/sound’, which deals with voice/sound as corporeal only, so qua theme the present chapter, in rendering the diaphonia explicit and thus to some extent redressing the balance, is an appropriate and much needed sequel. In Aristotle *de An.* 2.8 the echo is explained in the chapter on voice/sound, in Alexander *de An.* 47.25–49.3 the account of echo follows after that of hearing and is in its turn followed by that of voice. Our chapter is followed by ch. 4.21, ‘How does the soul perceive and what is its regent part?’, which seems to be an illustrative duplication and complement of chs. 4.11 ‘How the sensation comes to be ...’ plus ch. 4.5, ‘On the regent part ...’; see above, Introduction to Book 4, section 6. Ch. 4.22 ‘On respiration’ is a more appropriate sequel to ch. 4.20, as it takes up the theme of one of Aristotle’s *Parva naturalia*, the collection of appendixes to the *De anima*.

b Number–Order of Lemmata

The chapter is bi-lemmatic. There are no grounds to change the order of P, although we may assume that P’s epitome omitted several other lemmata relating to views cited in richer parallel accounts.

c Rationale–Structure of Chapter

The rationale of this (abridged) chapter is very clear: a diaphonia between those who hold that voice/sound is incorporeal and those who hold that it

is corporeal. For this type of opposition cf. chs. 1.11, 4.2–3, 5.4; cf. M–R 2.1.14, 2.1.58–59, 2.1.147.

d Further Comments

Individual Points

§1 P may have coalesced two lemmata, one with the name-labels Pythagoras Plato (voice/sound corporeal, see ch. 4.19.1), the other with the name-label Aristotle: voice/sound incorporeal. But Gellius attributes incorporeality of voice to Plato. The explanation referring to incorporeal ‘shape’ and ‘surface’ is consistent with the view attributed to Aristotle at ch. 4.6.2, cited above at *loci Aetiani*. The bent stick is not that of the optical illusion.

§2 The Stoic image of the bouncing ball is anticipated in Aristotle’s illustration of the echo’s movement, but need not necessarily derive therefrom. Q surprisingly did not know what pyramids are.

e Other Evidence

See at section B above.

E Further Related Texts

a Proximate Tradition

General texts: Aulus Gellius 5.15.1–9 *corpusne sit vox an ἀσώματον, varias esse philosophorum sententias. vetus atque perpetua quaestio inter nobilissimos philosophorum agitata est, corpusne sit vox an incorporeum. hoc enim vocabulum quidam finxerunt proinde quod Graece dicitur ἀσώματον. corpus autem est, quod aut efficiens est aut patiens; id Graece definitur: τὸ ἦτοι ποιοῦν ἢ πάσχον. quam definitionem significare volens Lucretius poeta ita scripsit (DRN 1.304, cf. Sen. Ep. 106.8): ‘tangere enim aut tangi nisi corpus nulla potest res’. alio quoque modo corpus esse Graeci dicunt τὸ τριχῇ διασπαστόν (cf. ch. 1.12.1), sed vocem Stoici corpus esse contendunt eamque esse dicunt ictum aëra; Plato autem non esse vocem corpus putat: ‘non enim percussus’ inquit ‘aer, sed plaga ipsa atque percussio, id vox est’. Democritus (fr. 492 Luria) ac deinde Epicurus (note at fr. 321, p. 353 Usener) ex individuīs corporibus vocem constare dicunt eamque, ut ipsīs eorum verbis utar, ῥεῦμα ἀτόμων appellant. Sextus Empiricus M. 6.53–55 οἷ γέ τοι περὶ τὸν Δημόκριτον (—) καὶ Πλάτωνα πᾶν αἰσθητὸν ἀναιροῦντες συναναιροῦσι καὶ τὴν φωνήν, αἰσθητὸν τι δοκοῦσαν πρᾶγμα ὑπάρχειν. καὶ γὰρ ἄλλως, εἰ ἔστι φωνή, ἦτοι σῶμά ἐστιν ἢ ἀσώματον· οὔτε δὲ σῶμά ἐστιν, ὥς οἱ Περιπατητικοὶ διὰ πολλῶν διδάσκουσιν, οὔτε ἀσώματος, ὥς οἱ ἀπὸ τῆς Στοᾶς (—)· οὐκ ἄρα ἔστι φωνή. **Commentaria in Dionysium Thracem, Scholia Vaticana** (i.e. of Stephanus) p. 181.4–17 Uhlig (FDS 483) καὶ οἱ μὲν τῶν παλαιῶν λέγουσι τὴν φωνὴν σῶμα, οἱ δὲ ἀσώματον· οἱ γὰρ λέγοντες (ᾧτι) ἄῃρ πεπληγμένος, σῶμα αὐτὴν νοοῦσι· σῶμα γὰρ (ὁ) ἄῃρ, ἐν ὑπάρχων τῶν τεσσάρων στοιχείων· οἱ δὲ λέγοντες ἀσώματον οὐ φασι τὴν φωνὴν (ᾧτι) ἄῃρ πεπληγμένος, ἀλλὰ πληγὴ ἀέρος ἦτοι ἴδιον αἰσθητὸν ἀκοῆς· ὅπερ*

ἐστὶ καὶ μᾶλλον ἀληθές. καὶ δῆλον ἐκ μεθόδου τοιαύτης· τῶν πραγμάτων τὰ μὲν ἐν τῷ γίνεσθαι ἔχει τὸ εἶναι, καθάπερ ἡ αὐλητική καὶ (ἡ) ὀρχηστική· ταῦτα γὰρ ἐνεργούμενα μὲν εἰσὶ, γεγονότα δὲ οὐκ εἰσίν, ἅμα γὰρ τῷ παύσασθαι τὴν ἐνέργειαν φθείρεται καὶ τὸ γινόμενον· τὰ δὲ ἐν τῷ γεγονέναι ἔχει τὸ εἶναι, ὥσπερ ἡ ἀνδριαντοποιητική καὶ (ἡ) τεκτονική· ταῦτα (γὰρ) ἐν μὲν τῷ γίνεσθαι οὐκ ἔχουσι τὴν ὑπαρξιν, καθὼ οὐπω ἀποτελέσμα ἔχουσι, μετὰ δὲ τὸ γενέσθαι ἔχουσι καὶ τὸ εἶναι, τότε τοῦ ἀποτελέσματος ὄντος. ἄρ' οὖν ἡ φωνὴ ἐν τῷ γίνεσθαι ἔχει τὴν ὑπαρξιν, μετὰ δὲ ταῦτα οὐχ ὑφίσταται· καὶ δῆλον ὅτι οὐκ ἔστι σῶμα, ἀλλ' ἀσώματον.

Chapter heading: Aulus Gellius 5.15.pr.1 *corpusne sit vox an ἀσώματον, varias esse philosophorum sententias. Capitula Lucretiana* at DRN 4.526 *corpoream esse vocem*.

§1 Pythagoras Plato Aristotle: Aulus Gellius 5.15.7 *Plato autem non esse vocem corpus putat: non enim percussus inquit aër, sed plaga ipsa atque percussio, id vox est. Commentaria in Dionysii Thracis Artem Grammaticam, Scholia Londinensia* (i.e. of Heliodorus) p. 482.7–12 Uhlig (*FDS* 481) ἀλλ' ἐπειδὴ ὁ ἄηρ σῶμά ἐστιν, ὁ δὲ Πλάτων τὴν φωνὴν οὐ δοξάζει σῶμα, δεῖ λέγειν τὸν ὅρον οὕτως· 'πληγὴ ἀέρος ἢ τὸ ἴδιον αἰσθητὸν ἀκοῆς'. εἰσὶ δὲ τινες λόγοι δεικνύντες τὴν φωνὴν ἀσώματον· καὶ ἔχουσιν οὕτως· τῶν πραγμάτων τὰ μὲν ἐν τῷ γίνεσθαι ἔχει τὸ εἶναι, τὰ δὲ ἐν τῷ γεγονέναι· (εἰ) ἄρα οὖν ἡ φωνὴ ἐν τῷ γίνεσθαι ἔχει τὴν ὑπαρξιν καὶ μετὰ ταῦτα οὐχ ὑφίσταται, δῆλον ὅτι οὐκ ἔστι σῶμα. **ps.Theodosius de Gramm.** p. 15.7–11 Göttinger εἰσὶ δὲ τινες λόγοι δεικνύντες τὴν φωνὴν ἀσώματον καὶ ἔχουσιν οὕτως· τῶν πραγμάτων τὰ μὲν ἐν τῷ γίνεσθαι ἔχουσι τὸ εἶναι, τὰ δὲ ἐν τῷ γεγονέναι· ἄρα οὖν ἡ φωνὴ ἐν τῷ γίνεσθαι ἔχει τὸ εἶναι καὶ μετὰ ταῦτα οὐχ ὑφίσταται· δηλονότι οὐκ ἔστι σῶμα.

§2 Stoics: Servius auctus in *Aen.* 2.488, p. 294.6–8 Thilo 'ferit ... clamor': *secundum philosophos* [physicos] (*SVF* 2.142) *qui dicunt, vocem corpus esse: bene ergo 'ferit'; [nam et fluvius habet mugitum, res incorporalis]*. Aulus Gellius 5.15.6 *sed vocem Stoici* (*SVF* 2.141) *corpus esse contendunt eamque esse dicunt ictum aëra. Sextus Empiricus M.* 8.12 (*SVF* 2.166) τοῦτων δὲ δύο μὲν εἶναι σῶματα, καθάπερ τὴν φωνὴν καὶ τὸ τυγχάνον. *P.* 3.115 ἡ πόρησάν τινες λέγοντες, ὅτι τὸ κινούμενον οὐ μένει, πᾶν δὲ σῶμα διαρκῶς κινεῖται κατὰ τὰς τῶν δογματικῶν ὑπολήψεις. *Simplicius in Phys.* 426.1–6 καὶ οἱ ἀέρα δὲ πεπληγμένον τὴν φωνὴν ἀποδιδόντες, ὥσπερ Διογένης ὁ Βαβυλώνιος (*SVF* 3 Diog. 19), ἀμαρτάνουσι· σῶμα γὰρ οὕτως ἔσται ἡ φωνή, εἴπερ ἐν γένει τῷ ἀέρι ἐστὶ, καὶ τὸ πεπονθός, τουτέστι τὸν πεπληγμένον ἀέρα, ἀντὶ τοῦ πάθους, ὅπερ ἐστὶν ἡ πληγὴ, ἀποδιδόασιν. καίτοι εἴπερ ἄρα κατὰ τὴν πληγὴν ἡ φωνὴ ἐστίν, ἀλλ' οὐχὶ κατὰ τὸ πεπληγμένον. *Commentaria in Dionysii Thracis Artem Grammaticam, Scholia Londinensia* (i.e. of Heliodorus) p. 482.13–31 Uhlig) ὁ δὲ Ἐπίκουρος (—) καὶ ὁ Δημόκριτος (68A127 DK) καὶ οἱ Στωϊκοὶ (*FDS* 481) σῶμά φασιν τὴν φωνήν. πᾶν (γὰρ) ὃ δύναται δρᾶσαι καὶ παθεῖν σῶμά ἐστιν, ὥσπερ ὁ σίδηρος· πάσχει μὲν γὰρ οὗτος ὑπὸ πυρός, δρᾶ δὲ εἰς ἀνθρώπους ἢ εἰς ξύλα· εἰ ἄρα καὶ ἡ φωνὴ καὶ δρᾶ καὶ πάσχει, σῶμά ἐστι· καὶ δρᾶ μὲν, ἡνίκα ἀκούοντες ἡμεῖς ἢ φωνῆς ἢ κιθάρας πρὸς τέρψιν ἐρχόμεθα, πάσχει δέ, ὡς ὅταν φωνοῦντων ἡμῶν ἄνεμος πνεύσῃ καὶ ποιήσῃ ἡττον ἀκούεσθαι τὴν φωνήν. ἔτι καὶ οὕτως ἀποδείκνυται σῶμα· πᾶν αἰσθητὸν σῶμά ἐστιν, οἷον τὸ ξύλον, ὁ λίθος·

ταῦτα γὰρ αἰσθητά εἰσιν, ὑποπίπτουσι γὰρ τῇ ὁράσει· εἰ ἄρα οὖν καὶ ἡ φωνὴ αἰσθητόν, ὑποπίπτει γὰρ τῇ ἀκοῇ, δῆλον ὅτι σῶμά ἐστιν. ἔτι ἰδιὸν ἐστὶ σώματος τὸ ποτὲ μὲν αὐξάνεσθαι, ποτὲ δὲ λήγειν, οἷον ὡς ἐπὶ τοῦ δένδρου· εἰ ἄρα οὖν καὶ ἡ φωνὴ καὶ αὖξεται καὶ λήγει, δῆλον ὅτι σῶμά ἐστι· καὶ αὖξεται μὲν, ὡς ἐπὶ τῶν παίδων, ὧν ἡ φωνὴ βραχεῖά ἐστι μικρῶν ὄντων, αὐξηθέντων δὲ μεγάλῃ· λήγει δὲ, ὅταν ἀσθενήσαντός τινος ἀσθενούσα καὶ αὕτη μειωθῇ. ἔτι πᾶν τὸ ἀντιτυποῦν σῶμά ἐστιν, ὡς ἐπὶ τοῦ λίθου· καὶ γὰρ ἀπτομένων ἡμῶν τούτου ἀντιτυπία γίνεται—ἀντιτυπία δὲ λέγεται ὅταν εὐρεθῇ τι προσκρούον—εἰ ἄρα καὶ ἡ φωνὴ ἀντιτυπεῖ προσκρούουσα ταῖς ἀκοαῖς—καὶ γὰρ ἡ φωνὴ προσκρούουσα ταῖς ἀκοαῖς ἐξάκουστος γίνεται—, δῆλον ὅτι σῶμά ἐστιν. **ps.Theodosius de Gramm.** p. 15.12–16.4 Götting γνώμαι παλαιαὶ περὶ φωνῆς· ὁ δὲ Δημόκριτος (—) καὶ ὁ Ἐπίκουρος (—) καὶ οἱ Στωϊκοὶ (—) σῶμα λέγουσι τὴν φωνήν, ὅτι πᾶν, ὃ ἔχει ἐνέργειαν καὶ πάθος, ἡγουν δύναται δρᾶσαι καὶ παθεῖν, σῶμά ἐστιν. ὥσπερ ὁ σίδηρος· πάσχει γὰρ οὗτος ὑπὸ πυρός, δρᾶ δὲ εἰς ἀνθρώπους καὶ εἰς τὰ ξύλα καὶ πέτρας· εἰ τοῖνυν ἡ φωνὴ καὶ δρᾶ καὶ πάσχει, σῶμά ἐστιν. καὶ δρᾶ μὲν, ἡνίκα ἀκούοντες ἡμεῖς ἡ φωνῆς ἡ κιθάρας πρὸς τέρψιν ἐρχόμεθα· πάσχει δὲ, ὡς ὅταν φωνούντων ἡμῶν πνεύσῃ ἄνεμος, καὶ ποιήσῃ ἥττον ἀκούεσθαι τὴν φωνήν. καὶ ἔτι πᾶν αἰσθητὸν σῶμά ἐστιν, οἷον τὸ ξύλον καὶ ὁ σίδηρος, ὁ λίθος καὶ τὰ ὅμοια. ταῦτα γὰρ αἰσθητά εἰσὶ καὶ τῇ ὁράσει ὑποπίπτουσιν. αἰσθητὸν τοῖνυν καὶ ἡ φωνὴ ἐστὶ καὶ τῇ ἀκοῇ ὑποπίπτει· ἄρα ἡ φωνὴ σῶμά ἐστιν. καὶ ἔτι ἰδιὸν τοῦ σώματος ἐστὶ τὸ ποτὲ μὲν αὐξάνεσθαι, ποτὲ δὲ λήγειν. ἡ οὖν φωνὴ ποτὲ μὲν αὖξεται, ποτὲ δὲ λήγει· ἄρα σῶμά ἐστιν. ἐπὶ μὲν τῶν παιδίων βραχεῖά ἐστὶν ἡ φωνή, μικρῶν ὄντων· αὐξηθέντων δὲ μεγάλῃ· λήγει δὲ ἐπὶ τῶν ἀσθενούντων. καὶ ἔτι πᾶν τὸ ἀντιτυποῦν σῶμά ἐστιν, ὡς ἐπὶ τοῦ λίθου· καὶ γὰρ ἀπτομένων ἡμῶν τούτου, ἀντιτυπία γίνεται. τότε οὖν γίνεται ἡ ἀντιτυπία, ὅταν εὐρεθῇ τι προσκρούον· εἰ οὖν ἡ φωνὴ ἀντιτυπεῖ προσκρούουσα ταῖς ἀκοαῖς, ἄρα σῶμά ἐστιν.

Commentary

A *Witnesses*

The witnesses for P are P^B and P^Q, partly confirmed by P^G. P^G has not only abridged further, as is the rule, but also replaced part of a lemma with an improvised remark. In P^Q parts of the text have been omitted or lost, perhaps also through *saut du même au même*, just as in one ms. of P^B. S is lost apart from part of the chapter heading (confirmed by Photius' index), which is important in that it proves (again) that he did excerpt the chapter, thereby confirming its attribution to A, but the text was subsequently squeezed out. T did not excerpt the chapter.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition is virtually non-existent for this chapter. The cousin source Nem NH c. 12 contains a parallel to ch. 4.21.1 and begins with a backward glance at NH c. 6, which is parallel to ch. 4.12.

(2) *Sources*. The sources belong with the mainstream Stoic tradition, except the minority view concerned with the position of the regent part in the head (see below, section D(e)§1[20–21]). As intermediary source we may think of a Stoic handbook (Diels' 'liber Stoicorum', see below, section D(a)), or one providing Stoic doctrine, just as was the case for chs. 4.11, 4.12 and 4.15.

C Chapter Heading

A detailed and specific one. P^G has omitted the second part of the heading of P^{BQ}. S 1.57 has combined the headings of the three chapters 4.19–4.21. Wachsmuth *Prolegomena* p. x is almost certainly right that the words *πόθεν αἰσθητικὴ γίνεται ἢ ψυχὴ καὶ* had already fallen by the wayside before Photius made up his table of contents (*saut du même au même*, presumably). The second part of the present heading recalls the first part of that of ch. 4.5: *Τί τὸ τῆς ψυχῆς ἡγεμονικόν*, and its first part recalls the first part of that of ch. 4.11: *Πῶς γίνεται ἢ αἰσθησις*. The sub-question *πόθεν* (*unde*) belongs with the question type of cause, see ch. 1.6 above, Commentary C; the question *τί* to the question type and category of essence/substance. On the dialectical aspect of these interrogatives *πόθεν* and *τί* see further above, ch. 1.1, Commentary C.

D Analysis

a Context

This is the last chapter of the series of chapters on the soul in the proper sense of the word which began at ch. 4.2. It is followed by an appendix, ch. 4.22 'On respiration', treating a theme to which Aristotle devoted a little treatise in the *Parva Naturalia* appended to the *De anima*, and by ch. 4.23, which deals with the issue of the impact of bodily pains on the soul, a topic not separately treated by Aristotle but of some importance in Hellenistic philosophy. Just as chs. 4.11, 4.12, and 4.15, chapter 4.21 is devoted to Stoic doctrine only, and just as these three chapters it appears to have been added to further illustrate and to some extent correct or at least update what comes before. Diels *DG* 61 briefly refers to what he believes to be the common origin of these 'supplementa Stoica' in a 'liber Stoicorum'. But note that in the present case, too, this additional material is worth having. The updating and correcting are relevant to the various tenets (including Stoic ones) concerning the parts of soul in ch. 4.4 and those concerning sensation in ch. 4.8, as well as to the series of doxai concerned with the location of the regent part in ch. 4.5. It may have been easier to add a new chapter than to rewrite several others. The chapter also further supplements the information on Stoic doctrine in ch. 4.11, but unfortunately fails to help identify the material left out there by P. See also above, Introduction to Book 4, section 5.

b Number–Order of Lemmata

Just as with chs. 4.11 and 4.12 there is no need to divide the chapter into lemmata, as we are dealing with a single name-label and a single doctrine. Dividing up the single doxa (as Diels did), but distinguishing five instead of four sections, helps to follow the exposition.

c Rationale–Structure of Chapter

In the absence of a plurality of views there is no diaeretic and/or diaphonic structure, though the point about the location of the regent part provides a strong opposition to ch. 4.5.7.

d Further Comments

Individual Points

§1[5] For λογισμός meaning ‘reason’ in a Stoic context see Whittaker (1998).

§1[8–13] Consistently with the metaphor of the tentacles of the octopus (§1[6–7])—also in ch. 4.4.4, where the direction of motion is also from regent part to sense organs—this account emphasises the active side of the perceptive process, not the receptive side as in ch. 4.11.

§1[15–16] We have of course preferred G’s readings σπερματικόν and φωνητικόν to the σπέρμα and φωνήν found in P^B. These are paralleled in several other testimonia. See ch. 4.4.4[10–11], Chrysippus at Galen *PHP* 3.1.11 p. 170.15, Porphyry *de An.* at Stob. 1.49.25a, p. 350.15, Nem *NH* c. 15, p. 72.9 for σπερματικόν, and again A 4.4.4.[11], Diogenes Laertius *V.P.* 7.110, 157, again Porphyry *de An.* at Stob. 1.49.25a, p. 350.15, and again Nem *NH* c. 15, p. 72.9 for φωνητικόν. It is true that Chrysippus at Gal. *PHP* 3.1.11 (assuming the text is good, which probably it is not) speaks of φωνήν not φωνητικόν, but even he uses σπερματικόν not σπέρμα.

§1[15–18] It is only here and not in ch. 4.19 that we hear something about the production of voice in the physical sense and the role of the trachea.

§1[20–21] That the regent part is located in the head is a minority view among the Stoics, see ch. 4.5.7, where according to ‘all [*sic*] the Stoics’ it is placed in the heart or the *pneuma* near the heart. For the minority view see also Philodemus *Piet.* col. ix.9–27 Henrichs, Cornutus *ND* 2, p. 2.13–15 and 20, p. 29.15–30.2 Torres, and Chrysippus at Galen *PHP* 3.8.3–4 (*SVF* 2.908), who argued against it (passage quoted section E(b)§1[19–20]). Relevant in this connection are the various Stoic views on the regent part of the cosmos. These are listed at Diogenes Laertius *V.P.* 7.139: the aether (Antipater, not in *SVF* 3), the heaven (Chrysippus, not in *SVF* 2, and Posidonius F 23 E.-K.), the sun (Cleanthes *SVF* 1.499), or the purest aether (Chrysippus *SVF* 2.644). In ch. 2.5a above, on the location of the regent part of the cosmos, we have, one after the other: Plato: in the heaven, Cleanthes: in the sun, Archdemus: in the earth, and Philolaus:

in the innermost fire. The view rejected by Chrysippus is based on an analogy between Cosmic Soul and human soul. Note that in §1[3] the regent part is said to be the ‘highest part of the soul’, clearly not only in a metaphorical sense. The comparison between head and cosmos, both round, and the location of the higher soul in the head are of course originally Platonic; for the *Placita* see ch. 1.6[9–12], quoted among the *Loci Aetiani*. It is hard to avoid the conclusion that what we have here is the reception of a Platonic view in later Stoicism. It is paralleled in Ptolemy’s *On the Criterion and the Hegemonikon*.

This final sentence can be understood without an explicit subject for ὥσπερ ἐν κόσμῳ (sc. κατοικεῖ), but then is rather harsh. We believe that just as in ch. 1.6[7–25] and 1.7.22[114], see ch. 1.6 Commentary D(d)§1[7–25], κόσμος should be translated ‘heaven’ and not ‘cosmo’/‘monde’ as by Torraca and Lachenaud. Also, that (Diels’) ὁ θεός should be added before and σφαιροειδεῖ after ἐν κόσμῳ, for we need this to balance ἐν σφαιροειδεῖ κεφαλῇ, the spherical head being the highest part of the human body, just as the ‘spherical heaven’ is the highest part of the world. We have refrained from adding these words to the text, only putting them in the apparatus and adding them to the translation *exempli gratia*.

e Other Evidence

The Stoic doctrine of our chapter, with and without name-label, is paralleled in a multiplicity of sources; see below at section E(b)§1 passim.

E Further Related Texts

a Proximate Tradition

Commentary

A *Witnesses*

The witnesses for P are P^B, P^G, P^Q, and the five mutilated last lines of the chapter in P^P. Apart from the chapter heading listed in the index of S^L and the quotation of the heading in Photius' index S is again lost. This text clearly was too difficult for P^Q, whose translation is not good, while P^G is again incomplete and much abridged. Yet several readings that differ from those of P^B are worth accepting, see below, section D(d).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The proximate tradition is virtually limited to the passage from Galen's *De utilitate respirationis* cited below section E(a)§2. In the *traditio proxima* represented by Nem we are informed about the discussion concerning the causes of respiration as being either physical or psychic (or both). See Nem *NH* c. 28, p. 90.9–15 (in the chapter titled 'On Respiration'): 'so on account of this necessity the soul is active in this part no less when we are asleep, since it knows that if it should slacken even for a very short time the living being would perish. So here again the natural is implicated with the domain of the soul: for it is through an artery [i.e. the windpipe], a natural organ that is in continual motion, that (the soul) creates the activity of breathing, so that its task should never fail, nor that of the other arteries. For this reason some who did not understand have thought breathing to be a purely natural function' (tr. Sharples–Van der Eijk). Among those 'some' we may presumably count Empedocles and Herophilus. Nem, who is here much influenced by Galen, begins the chapter at p. 89.19 by stating the Galenic view that 'respiration belongs with the activities of the soul' (ἡ ἀναπνοὴ δὲ τῶν ψυχικῶν ἐστὶν ἔργων).

(2) *Sources.* Perhaps Aristotle is more important here than Theophrastus, see Baltussen (1993) 219. In the *De respiratione* Aristotle states (1 470b6–7) that only a few of his predecessors have discussed respiration (περὶ γὰρ ἀναπνοῆς ὀλίγοι μὲν τινες τῶν πρότερον φυσικῶν εἰρήκασιν). He discusses Empedocles at length (ch. 7). P's account of breathing differs from Aristotle's in that the Stagiritic does not deal with the respiration of the first living being (born from the earth). But his brief account of respiration as it happens now describes the same process as Aristotle, and like Aristotle he refers to the clepsydra, though he does not quote the famous fr. 31B100DK (quoted below section E(b)§1). Aristotle also discusses Democritus, Anaxagoras, Diogenes and the *Timaeus* (2 470b28–471a5, 3 471b15–17, 4 471b30–472a16, 5 472b6–473a2), though more briefly than Empedocles. All these others are absent from P, who instead has the Hellenistic doctors Hero-

philus and Asclepiades, who of course are not in Aristotle. Cf. Althoff (1999) 78–85. It is clear that compared with Aristotle and Galen the collection of doxai in P (we do not know about A) is quite limited. Even Aristotle's own view is lacking.

C Chapter Heading

Of the standard umbrella type *περὶ τοῦ δεῖναι* (cf. ch. 1.1 Commentary C), and found in both P and S. It is paralleled as the title of one of Aristotle's *opera minora*, the *De respiratione*—see also his cross-reference at *PA* 4.13 669a4–5 *καθάπερ εἴρηται ἐν τοῖς Περὶ ἀναπνοῆς*—and of a work of Asclepiades. See further e.g. the Galenic variations *Περὶ χρείας ἀναπνοῆς* (*De utilitate respirationis*) and *Περὶ τῶν τῆς ἀναπνοῆς αἰτίων δύο* (*De causis respirationis*). The main question type is that of cause, while the categories of place and action and passion, and (in §1) that of time also play a part.

D Analysis

a Context

The chapter follows on as a sort of appendix after the chapters on the perceptions and the senses and sense data, and comes directly after ch. 4.21, which, as we have noted, provides a supplementary and to some extent alternative detailed account of perception and the regent part. At the end of this chapter, 4.21[16–19], the 'vocal part' (*φωνητικόν*) of the soul is described as 'a *pneuma* stretching from the ruling part to the trachea and tongue and its appropriate organs'. That speech and respiration are connected is clearly presupposed here. See e.g. Galen *AA* 2.675.7–8 K, 'exhalation, without which voice cannot be generated' (quoted section E(b) General texts); useful overview in Baumgarten (1962) 173–195. A pseudo-Galenic treatise 'On Voice and Respiration' is extant in a Latin translation, presumably from the Arabic (*De voce et anhelitu*, ed. Baumgarten 1962). Respiration, as we noticed above at section B(2), is the theme of one of Aristotle's *Parva naturalia*, which constitute an appendix to the *De anima*. The present chapter is followed by ch. 4.23 on the issue of the impact, or not, of bodily discomfort on the soul. Respiration concerns both body and soul: it is quasi-automatic but can be influenced by the will (see §2 and below, section D(c)).

b Number–Order of Lemmata

P^{BQ} have three lemmata, of which P^G omits the first. P may have left out other tenets (e.g. one for Diocles, a name-label relatively often found in A), see the dialectical passage from the first chapter of Galen's *De utilitate respirationis* quoted below at section E(a)§2; and above section B as well as

below section E(b) General texts for the names mentioned in Aristotle's *De respiratione*. The order of A's lemmata is not chronological: Herophilus, not Asclepiades, comes last. This may be explained by the fact that from one lemma to the next the mechanics of respiration, though similar, become more complicated and detailed. Yet from a systematic point of view the sequence is not entirely satisfactory, because §2 Asclepiades (also voluntary respiration) is in part opposed to §1 Empedocles and §3 Herophilus (only mechanical respiration), so would have been in an equally defensible position at the end; see below at section D(c). Diaeresis here apparently prevails over diaphonia.

c Rationale–Structure of Chapter

In P's text of the present chapter of A we have physico-mechanical explanations of respiration in §1 and §3, and also for the most part in §2. The not very strong diaphonia is between §§1 and 3 on the one hand and §2 on the other. §1 Empedocles and §3 Herophilus hold that respiration is caused by internal and external physical and mechanical factors. §2 Asclepiades agrees that respiration is caused by internal and external physical and mechanical factors, but adds that it can also be *voluntary*, that is, obviously, that it can also be caused by the *soul* (which, as we may recall, is the 'common exercising of the senses' according to the Asclepiades lemma ch. 4.2.8). For the distinction between physical and psychic, i.e. voluntary movements see Galen *Mot.Musc.* 4.372.13–17 K., τῶν κινήσεων αἱ μὲν ἀρτηρίας τε καὶ φλεβὸς φυσικαί τε καὶ χωρὶς ὀρμῆς, αἱ δὲ τῶν μυῶν ψυχικαί τε καὶ μεθ' ὀρμῆς ... εἴτε δὲ μετὰ προαιρέσεως λέγοις τὰς τῶν μυῶν γίνεσθαι κινήσεις, ἢ ἐκουσίως, ἢ μετὰ βουλήσεως, οὐδὲν διοίσει. For an argument that respiration is (also) voluntary see *ibid.* 442.2–443.4 K. Yet the overall emphasis on the mechanical aspect of respiration in the present chapter is to some extent out of tune with the general scope of Book 4.2–21, with its detailed account of the soul and of its predominant role in natural processes. We should take P's interest in specifically physiological and medical tenets into account, which becomes very clear in the next book, *ubi vide* (see also Runia 1999a, repr. M–R 3.515–575).

d Further Comments

General Points

This is one of the longest chapters in the *Placita*, presumably because the processes that are described are very complicated and so very hard to abridge (as can be seen in G's efforts).

Individual Points

§1 A's interpretation of the Empedoclean mechanics (primary role of the blood) is very similar to that advocated by Rashed (2008). The (first) respiration of the primeval living being born from the earth is described in literally the same terms as that of today's new-born infant at ch. 5.15.3, a striking repetition which we seldom find in (P at) A. See below, ch. 5.15.3, Commentary D(c)(3)). Diels should not have followed Karsten in bracketing *πρώτου*. For a similar contrast and comparison between what happens at cosmogony with what happens now, see below, ch. 5.7.1–2 as different from the paragraphs that follow, and ch. 5.18.1 as different from the paragraphs that follow.

§2 This passage is lacking in Furley–Wilkie (1984). We should accept PG's *καθαίρεσθαι* instead of PB's *φέρεισθαι* in §2[16]. It is hard to believe that *φέρεισθαι* could be corrupted into or misread as *καθαίρεσθαι*, while *φέρεισθαι* instead of *καθαίρεσθαι* is easily explained as a case of *perseveratio*. *καθαίρεσθαι* makes sense: the heavy-particled outside air is 'cleansed' before joining the fine-particled air that is inside. PG's *καθαίρεσθαι* is moreover supported by PQ's formula *schlecht wird*, a failed translation not of *φέρεισθαι* but of *καθαίρεσθαι* (misread as *καθαίρεισθαι*), so here we have both PG and PQ against PB. A juncture of two virtually synonymous verbs of course also fails to satisfy the doxographical standard of brevity.

§3 Diels' correction of *πρώτον* for *μόνον*, inspired by the odd compositum *προορέγεσθαι* in a ms. of PG, is worth accepting.

e Other Evidence

Respiration is dealt with *inter alia* in Plato *Tim.* 77e–79a, in Aristotle's *De respiratione*, in *Probl.* 34.7–8 and 34.11–12, in ps.Aristotle *De spiritu*, and in no less than three works of Galen: *De utilitate respirationis* (*Περὶ χρείας ἀναπνοῆς*), *De causis respirationis* (*Περὶ τῶν τῆς ἀναπνοῆς αἰτιῶν*) and *De difficultate respirationis* (*Περὶ δυσπνοίας*). According to Aristotle respiration is not voluntary, while according to Galen it is voluntary, and without even mentioning Aristotle in this context he calls those who favour the mechanical explanation 'sophists'. In his medical Encyclopedia *Kulliyat* (lat. *Colliget*) Averroes discussed various views, and argues for the most part in favour of Aristotle against Galen, see Bürgel (1967).

E Further Related Texts

a Proximate Tradition

General texts: ps.Galen *Def.Med.* 19.375.5–15 K. ρη'. ἀναπνοή ἐστὶ κίνησις θώρακος καὶ πνεύμονος. μέρη δὲ αὐτῆς εἰσι δύο, εἰσπνοὴ καὶ ἐκπνοή. ἢ οὕτως. ἀναπνοὴ ἐστὶν ὅλην ἀέρος διὰ στόματος καὶ μυκτῆρων εἰς ἐγκέφαλον καὶ διὰ φάρυγγος καὶ

πνεύμονος εἰς καρδίαν· πάρεισι δέ τοι καὶ εἰς τὴν κοιλίαν. καὶ ἐκ τοῦ ληφθέντος πάλιν ὀλίγη τις ἀνταπόδοσις εἰς τὸ περιέχον γίνεται. ρθ'. διαπνοὴ ἐστὶν ὁλκὴ ἀέρος ἀπροαίρετος ὑπὸ τοῦ φυσικοῦ θερμοῦ διὰ τῆς ἐπιφανείας ἅμα τοῖς συναπερχομένοις αὐτοῦ σώματος γινομένη. ἐτέρως. διαπνοὴ ἐστὶν ἐκ τοῦ σώματος ὁλκὴ ἀέρος μετ' ὀρέξεως φυσικῆς δι' ὅλου τοῦ σώματος καὶ πάλιν δι' ἐξόδων ἀπόκρισις. **Galen** *Inst. Commentary

A *Witnesses*

Our only witness for the text of the chapter is P, represented by P^P, P^B, P^Q, and P^G (who again omits the first lemma). The heading is in part attested by S, but again the text is lost for the *Eclogae*. On the papyrus snippet see further below Commentary D(d) General points.

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. The parallel doxographical overview in Plutarch(?) *De libidine et aegritudine*, cited below section E(a) General texts and §4, is particularly rich. The cousin writing Nem c. 2 provides a parallel for the bare bones of the issue.

(2) *Sources*. The sources are not clear, apart from the Strato lemma, for which we have a satisfactory parallel that at least indicates a shared tradition.

C Chapter Heading

Diels preferred the short umbrella heading (type $\pi\epsilon\rho\iota\ \tau\omicron\upsilon\ \delta\epsilon\iota\nu\alpha$, see above, ch. 1.3 Commentary C) of P^G to the long heading of P^B (and P^Q). P^P is in favour of a somewhat longer short heading. But we probably need the long heading, as the chapter is not about affections in general (let alone about emotions), but about such occurrences as pains in the body and their reverberations in the soul: the $\kappa\alpha\iota$ is explicative. The shorter part of the chapter heading in S is identical to the heading of P^G , but it must be taken into account that it is part of a composite heading that is likely to have been abridged compared with the original. The book title $\Pi\epsilon\rho\iota\ \pi\alpha\theta\acute{\omega}\nu$, *On Affections* in a general sense is attested for ps. Hippocrates, Xenocrates, Theophrastus, Zeno, Chrysippus, Sphaerus, Herillus, Posidonius, and ps.Andronicus. A subdivision of Stoic ethics entitled $\pi\epsilon\rho\iota\ \pi\alpha\theta\acute{\omega}\nu$ is listed at Diogenes Laertius *V.P.* 7.84 (*SVF* 1.178, 3.1).

D Analysis

a Context

This is the concluding chapter of the book on psychology. Although the demarcation between Books 4 and 5 is to some extent arbitrary since the soul is still involved in the first chapters of Book 5 (see M–R 2.1.149–150 and below, ch. 5.1, Commentary D(a)), the problematical commonality of body and soul constitutes an acceptable finale. This topic, much discussed in ancient philosophical literature, is in Book 4, the Book on the soul, appropriately approached from the side of the soul as influenced by the body, not from that of the body as influenced by the soul. That the first chapters of Book 5 could also have been the last of Book 4 demonstrates that in a certain sense these two Books, dealing not with nature in general like the first three but with human nature (for the most part), belong together. For further details see the Introductions to these Books and above, General introduction section 2.7.

b Number–Order of Lemmata

P has three lemmata, of which P^G omits the first and (as far as his text goes) parallels the second and third. The order P_1 – P_2 – P_3 is systematic not chronological and should not be interfered with. P may have abridged A's chapter considerably, as the views of e.g. Plato and Aristotle are lacking (they perhaps were to be found in S's lost chapter). The account of a multiplicity of views in Plutarch(?) *De libidine et aegritudine* at any rate provides an impression of what has been lost because of P's abridgement. We cannot know what may have been the order and number of A's lemmata. P's residue is structured to his own doxographical satisfaction. Yet this is a very tight construction, which may also have been the main structure in A.

c Rationale—Structure of Chapter

The three quite brief lemmata of P's chapter are firmly linked by the presence of several identical formulas: ἐν τοῖς πεπονθόσι τόποις and τὰ πάθη and τὰς αἰσθήσεις in all three, ἐν τῷ ἡγεμονικῷ in both §1 and §3 (paralleled by τὸ ἡγεμονικόν in §2). Each lemma has been formulated in such a way that it relates in the first place diaeretically and even diaphonically to the other two (see at section D(d)). The Epicurean lemma aptly occupies a middle ground, as the strongest opposition is between the Stoic view and that of Strato, who is here *plus stoïcien que les Stoïciens*.

Stoics: affections in the affected bodily places, perceptions thereof in the regent part;

Epicurus: both affections and perceptions thereof in the bodily places, regent part unaffected [so there no perceptions of these affections];

Strato: the (according to others 'bodily') affections are of the soul, and the perceptions thereof are in the regent part.

All three tenets intimate that the soul is, or can be, independent of what happens to the body, see at D(d).

The individual points listed immediately below at Commentary D(d) largely explain the diaeresis too.

d Further Comments

General Points

The papyrus fragment of this chapter is of some interest. It is reproduced on Plate IV of Barnes-Zilliaceus (1960–1967). Its last six (partially preserved) lines cover the entire chapter. This is only possible because of the massive *saut du même au même* from the ἐν τοῖς πεπονθόσι τόποις in line 4 to exactly the same phrase in line 7. The snippet also allows us to observe some interesting paratextual markings. The lines above the final two letters of the first line indicate that it is the chapter heading. This line is also shorter, because the first lemma starts a new line. The last line contains a long stripe preceded by two upright semicircles. The stripe, called a *παράγραφος*, must have the function of indicating the end of Book 4. Such markings are very common in literary papyri of this period, including some well-known New Testament examples (private communication from James Royse).

Individual Points

§§1–2 The haplography in P^{B(II)} created a new (and bizarre) lemma for the Stoics in a part of the tradition, viz. οἱ Στωικοὶ τὰ μὲν πάθη ἐν τοῖς πεπονθόσι

τόποις· τὸ γὰρ ἡγεμονικὸν ἀπαθές. This may be compared with what happened in the entire tradition of P (including P^Q, so at an earlier stage of the transmission) at ch. 4.7.1–2, and elsewhere. In the present chapter the residual lemmata in P^{B(II)} still provide a conflict that is satisfactory from a purely doxographical point of view. This was not the case for the haplography in P^P, which resulted in only one name-label being preserved and must have made the text quite unintelligible.

§1 The contents of the doxa can be defended from the point of view of Stoic physiological psychology. That the perceptions are in the soul entails that one is in principle free to make up one's mind about what is going on (e.g. be convinced that pain is an indifferent).

§2 As Zeller (1909) 433 n. 2 (followed by Diels *DG ad loc.*) already pointed out, the doxa attributed to Epicurus is not consistent with the evidence on this topic found elsewhere; see section E(b)§2. It must have been formulated the better to provide a diaphonia with the doxa of the Stoics. A charitable interpretation of the result will refer to the Epicurean doctrine of the regent part of the soul of the wise man as independent of what happens to the body, which of course is not the same as being unaware of what is going on there.

§3 That according to the Strato doxa the regent part is capable of enduring bodily pains in the same way, as it is capable of deciding in connection with good or bad actions, also establishes the priority of the mind over the body.

e Other Evidence

Of special interest are the parallels in ps.Aristotle *Physiognomonica*, for which we have used the edition of Foerster (1893) and the translation and commentary of Vogt (1999). Aristotle himself accepted physiognomy as a scientific discipline.

Aetius Placita
Book 5 Physiology:
Text and Commentary

Introduction to Book 5

1 Transmission

Of the five books that make up A's compendium, Book 5 is the most poorly attested. This is because we are almost wholly dependent on P and its tradition for our textual material. We know from the evidence of the chapter headings of the Laurentian ms. and Photius' index that S made extensive use of the contents of this book for his chapters *Ecl.* 1.42–46, but most regrettably the Byzantine copyists excised almost all of these excerpts, preserving only 10 doxai in all: 1 in ch. 5.18, 1 in 5.20, 2 in 5.26, 1 in 5.28 and 5 in 5.30 (but care must be exercised with the titles in the Laurentianus, because some have been interpolated from P). In fact there are only two lemmata in S for which the equivalent is not found in P: 5.28.2 and 5.30.5, both of which appear to duplicate other doxai (and the latter of which is derived, quite exceptionally, together with three other lemmata from the *Florilegium* and not the *Eclogae* part of S's great Anthology). As for T, he leaves aside this book entirely, only recording three doxai from ch. 5.26 at second hand via a parallel text in Clement of Alexandria. For this chapter he may thus be regarded as a secondary witness, and as such he is the only witness in this category for the entire book.

Nolens volens, therefore, we must be almost wholly reliant on P and his tradition for this book. Since authors such as Eusebius, Lydus (except a brief mention of two doxai from ch. 5.2 on dreams), Cyril and Symeon Seth with their dominant focus on cosmology are not interested in its subject matter, there remain only five witnesses in all, the Antinoopolis papyrus, the Byzantine mss., Qustā, ps.Galen and Psellus. There are more papyrus fragments for Book 5 than any of the other books (11 with text from 13 chapters), but they yield very little, except on two points: (a) they show that early in the textual history the text could differ quite markedly from later witnesses (e.g. the curious chapter number for ch. 5.4 which might even be a trace of an edition in two books); and (b) through fr. 6^v we obtain a richer text for 5.1.1 which was evidently simplified in the later course of transmission. The Byzantine mss. record the pinax and all 30 chapters for a total of 112 lemmata. The archetype must have been damaged, because their quality trails off badly towards the end of the book. However, their text can be supplemented by G and Q. G includes all chapters in his epitome except chs. 5.27–28. He splits the final chapter 5.30 into two, for a total of 29 chapters in all. 78 of P's 114 lemmata are retained, but in many cases their contents are further abridged. Importantly, G preserves doxai at A 5.19.5, 5.23.3 and 5.29.3 that are no longer present in P^B, showing that he is using a more com-

plete text. This is also the case for Q, who translates the whole text in P^B, but also has the additional material in G (except A 5.23.3) and significantly adds more text for A 5.27.2 and 5.29.2. He also includes the precious mention of the name-label of Herophilus in A 5.30.2 which had fallen out in P^B and also, it seems, in the texts used by G and S. Ps makes use of only 13 chapters, but he does paraphrase passages from Book 5 more than is his practice in the case of the other books. In addition, ch. 5.30 is copied in full in a little-known Psellan text entitled Ἐπιλύσεις ποικίλων ἐρωτημάτων (but lacking the additional name-labels in GQ). All in all, the witnesses allow the editor to attain a reasonably secure text.

But, of course, since this text is almost wholly reliant on the tradition of P, it must be far from complete. Together with chs. 3.9–16 it is the most seriously incomplete section of A's surviving compendium. On average the book has 3.8 lemmata per chapter, by far the lowest of the 5 books (Book 1: 5.9; Book 2: 6.4; Book 3: 5.7; Book 4: 5.8). In order to gauge the degree of incompleteness we can draw on the statistical analysis of Jeremiah (M–R 4.297–373; see further General Introduction, section 2.7). He divides the whole work into two groups: (1) where P and S are both well represented, 87 chapters in all; (2) where P is preserved, but S is not extant or severely truncated, the remaining 48 chapters (M–R 4.286). By means of statistical analysis he determines that for the first group 42 lemmata are most likely missing, for the second group 81 lemmata (M–R 4.295). If we take the 30 chapters pro rata in the group of 48, there would be 45 missing. Another approach would be to take the average number of lemmata for chapters in Books 1 to 4, which is 6.0, and apply it to the 30 chapters of Book 5. In this scenario there would be 66 missing (180 minus 114). Jeremiah's result is lower, because the average number of doxai per chapter for the book is slightly lower than for the others, even when allowance is made for the absence of S and T. The actual number may be somewhere in between, so perhaps 55–60 missing doxai, about two per chapter. In our commentary, under section D(b), we will from time to time attempt to estimate the relative completeness of the chapter as transmitted, in light of comparisons with other books and the available evidence in the proximate tradition.

2 Subject Matter and Macro-structure

Unlike the other four books, Book 5 does not have an introductory remark indicating its subject. It thus continues on from Book 4, which according to its proem had the task of treating 'the particular phenomena' (τὰ κατὰ μέρος). The division between the two books can be fairly cleanly described as that between *psychology*, treating the activities of the soul with a strong emphasis on thought

and perception, and *physiology*, in which the role of the body and its processes comes more strongly to the fore. But this is not an absolute divide in ancient terms, since for example perception needs the bodily instrumentaria that make it possible and bodily processes cannot occur for the most part without psychic direction. So it is understandable that the division between the books is a bit untidy. The last two chapters of Book 4 on respiration and bodily affections have been placed there as a kind of appendix to the section on the voice at the end of ch. 4.21 (following on from chs. 4.19–20); see ch. 4.21 Commentary, D(a). However, given the bevy of medical details, they might have been better placed in Book 5, while the reverse could have been beneficial for the first two chapters on divination and dreams in Book 5, which clearly deal primarily with psychic processes.

The macro-structure of the book's subject matter is also not as neatly organised as one might wish. The main body of the book gives an overview of the development of the human being from conception to maturity. It amounts to a mini-treatise on the subjects of spermatology (chs. 5.3–5), conception (5.6–10), heredity (5.11–13) and embryology (5.15–18, 21–22). As last in the sequence ch. 5.23 deals with the question of when the human being (ἄνθρωπος) attains maturity. This chapter heading makes explicit the anthropocentric focus throughout these chapters, as seen for example in the questions whether females produce semen, how males and females are engendered, how similarities to parents and ancestors occur, on the length of viable pregnancies and so on. Such emphasis is consistent with two models in the background of the *Placita's* overall structure, Plato's *Timaeus* and the psychological and biological treatises of Aristotle. But the sequence is broken twice, first with a chapter on the sterility of mules (ch. 5.14) and then with two chapters on living beings, how they are born (ch. 5.19) and how many different kinds there are (ch. 5.20). The final seven chapters can be regarded as a kind of appendix, as suggested by Mansfeld (1990) 3189. The comparable processes of sleep and death are treated (chs. 5.24–25) and there is a chapter on plants (ch. 5.26) which is linked up as in Plato's *Timaeus* with questions of nourishment and growth (chs. 5.27–28). There is a single chapter on the aetiology of disease (ch. 5.29 on fever) and then the more general chapter on health, disease and old age (ch. 5.30) rounds off the book, and with it the compendium. The chapters in the appendix also focus for the most part on human beings, but chs. 5.27–28 treat nourishment more generally for all animals. We shall return to this vacillation in focus below in section 6.

3 Name-Labels

The final book of the *Placita* shares many common elements with the name-labels in the previous four books, but also shows some differences. In all there are 35 different name-labels, making it the least diverse of all the books, even when allowance is made for its small number of doxai (114); see the table furnished by Jeremiah in M–R 4.307. In terms of chronology they can be grouped as follows: Presocratics 14 (60 doxai); Classical period 4 (19); Hellenistic period 5 (26); doctors 8 (19); others 4 (Euripides the poet, Timaeus the astrologer, scientists, anonymi, 7 doxai in all). So even in the domain of physiology and biology the Presocratics predominate. But it should be noted that there is very limited inclusion of the early sixth century figures: Thales, Anaximander, Heraclitus, Xenophanes all just have one doxa each and the first thinkers to make an impact are Parmenides (5) and Alcmaeon (6), together with Pythagoras (5) who often stands in for his later followers. Most striking of all is the large number of doxai (some quite lengthy) attributed to Empedocles, no less than 17, all included within the sequence chs. 5.7–28. As Jeremiah has noted (M–R 4.324), the *Placita* are historically conservative, its citations peaking in the fifth century and declining thereafter. His graph (ibid.) shows that for Book 5 the period from the fifth to the third century is completely dominant, more so than in other Books, though not dissimilar from Book 4.

When we move past the fifth century there is less spread of names, with the philosophers associated with the Hellenistic schools well represented: Stoics (13), Aristotle and his school (11), Plato (7), Epicurus and his school (7). The figure for Plato is unexpectedly low, given the amount of physiological subject-matter in the *Timaeus*. For a list of the top 15 cited thinkers see M–R 4.328. The most distinctive feature of Book 5 is the large group of doctors, who scarcely appear in the earlier books. This is of course determined by the subject-matter (even though there is little discussion of specifically medical topics). The great fourth and third century doctors Diocles, Herophilus and Erasistratus are well represented (14 doxai) and there are 5 anonymous references to doctors. Quite surprisingly there is no reference to the father of medicine, Hippocrates, and only one to his followers (5.18.4). Another surprising absentee is Praxagoras.

Another feature of Book 5 is the relative prominence of multiple name-labels, which as Jeremiah's table at M–R 4.329 shows, record a higher incidence than elsewhere in the book, even though there are no long lists (triplets at A 5.4.2, 5.5.1, 5.18.3; 20 doublets). Most of the combinations are what we might expect, e.g. Pythagoras–Plato–Aristotle (5.4.2), Democritus–Epicurus (5.16.1, 5.19.5, 5.20.2), Parmenides–Empedocles (5.28.2), Anaxagoras–Euripides (5.19.),

Heraclitus–Stoics (5.23.1). But there are also some strange bedfellows, Xenophanes–Epicurus (5.1.2), Leucippus–Zeno (5.4.1), Stoics–Epicureans (5.26.3). The effect is to concentrate the number of views and give them more emphasis relative to the philosophers who hold them.

What explanations can be given for the relative lack of diversity of names in this book? Its incomplete preservation will have contributed. In his process of abridgement, P shows a bias towards the big names (M–R 1.189, 4.298), so having only his version without help from S will mean that we miss out on more uncommon names. It might also be argued that the subject-matter is more peripheral to the φυσικὸς λόγος. To be sure, as we shall see below in section 5, physiological and medical subjects had been incorporated into the doxographical tradition early, but it seems that many philosophers did not pronounce on them. There are almost no individual Stoics and Epicureans named (if Diogenes in 5.15.4 is the Stoic, he is not identified as such). One might have also expected a larger diversity of doctors to be included.

4 Method and Micro-structure

Book 5 has, as was already noted, by far the lowest average number of lemmata per chapter (3.80). Its longest chapter has only eight doxai (ch. 5.7), much less than is the case in other books. There are two monolemmatic chapters (chs. 5.6, 5.22) and three with only two doxai (chs. 5.21, 5.27–28), all of which are most likely incomplete. Most chapters, however, have at least three doxai (11 examples), which as we shall see has important consequences for their structure. There are also few doxai of any great length. Two chapters have series of long doxai: ch. 5.18 on the complex matter of viable pregnancies, and ch. 5.29 on the aetiology of fever. For the rest there are only a handful of Empedoclean doxai which extend beyond seven lines, A 5.19.6 on the birth of living beings, 5.22.1 on the composition of our generic parts, and 5.26.4 on origin of plants. In each case protological details lengthen the account.

Book 5 also deviates from the rest of the compendium in that it has very few chapters whose headings use the common ‘umbrella’ Περί x formula (only ch. 5.1 on divination, 5.27 on growth and increase, 5.30 on health and disease and old age; 5.19 on the birth of living beings is a special case since there the περί formula is used to introduce two other questions). There is also only one chapter which ask the τίς or τί question, commencing with a definition and asking the question of substance (ch. 5.3 on the οὐσία of semen, cf. 5.26 using εἶ). By far the greatest number of chapters inquire after the cause, using either the formula with πῶς (11 examples with two more in second position in the head-

ing) or with διὰ τί (three examples) or with πόθεν (two examples). This usage is in sharp contrast to the other books, where πῶς is only used four times (chs. 1.4, 2.19, 3.17, 4.11) and διὰ τί only subordinately in ch. 2.30. The other formula that is common in the book is asking questions with εἰ, e.g. ch. 5.5 whether females too release semen (see also 5.4, 5.15, and in second or third position in the heading 5.19, 5.20, 5.26, 5.29). Such questions readily invite a positive or negative answer which will structure the chapter in terms of a diaphonia. The remaining chapter headings mostly ask questions in the usual way of the *Placita*, involving the categories of quality (ch. 5.22), quantity (5.20, 5.22) and time (5.21, 5.23).

Book 5 is therefore overwhelmingly focused on seeking the cause of physiological and biological processes. The most common formula for this quest is πῶς plus the verb γίγνομαι (or sometimes γεννάω in a reproductive context). Not only does it occur frequently in chapter headings, as we have just seen, but the verb occurs repeatedly in the doxai of the chapter itself, together with numerous examples of phrases involving the prepositions διὰ, κατὰ and παρὰ and nouns in the dative case indicating agency. In the expression of the causes themselves there is a good deal of variation. Sometimes they are piled up in long lists of alternative explanations, most notably in the chapters on conception (chs. 5.6, 5.8, 5.9, 5.13). As our author claims in A 5.8.1 when speaking of Empedocles, the alternatives given appear to virtually exhaust the listing of all the causes that can be given. Much of the information is very brief and schematic, as is consistent with the general method of the *Placita*. Rarely are detailed explanations furnished. The most extensive are found—perhaps not surprisingly—in the only chapter to deal with a specific disease (as the ancients thought), ch. 5.29 on fever. As elsewhere in the work, the stream of information is enlivened by images and illustrations, such as sexual fantasies in sleep (5.2.3), women falling in love with statues (5.12.2), and a remarkable description of viticultural terroir (5.26.4).

The virtually universal method of organising the micro-structure of the individual chapter is by means of the dialectical techniques of the diaeresis and the diaphonia, which lend themselves as well for the delineation of causes as they do for other kinds of questions. Sometimes opposed views are emphasised, e.g. on whether the embryo is living being or not (ch. 5.15), at other times the diaeresis takes the form of an ordered list (ch. 5.17, though not as well organised as we might wish). Our doxographer loves schematic grids, in which he can fill out the various possibilities, for example on whether semen is bodily (ch. 5.4) or whether plants are living beings or ensouled or neither (ch. 5.26). For each chapter, where relevant, we have outlined the diaeretical structure, often including an evaluative comment. It is evident that our author wishes to

attain informative and didactically useful structures, but it also seems that he has not always mastered his material sufficiently well. Sometimes, of course, factors relating to the poor transmission of his work may be to blame.

In previous books we have observed a creative tension between systematic and historical aspects of doxography. Book 5 stands out in its lack of historiographical material. Very little information is given regarding name-labels. Diocles is introduced as a doctor in 5.9.1, but nothing is said about little-known names such as Hippo (chs. 5.5, 5.8), Polybus and Timaeus (both in 5.18). Only in the case of Leophanes (5.7.5) are we told that Aristotle mentions him. There are no topics for which the 'first discoverer' is cited. The role of Hippocrates as initiator of medical research is ignored (but he is mentioned at A 5.18.4 as having initiated a series of followers). Alcmaeon is prominent with five doxai; as in Book 4 he is usually placed at or close to the beginning of the chapter. If this implies an early date, this is not made explicit. It is not surprising that in Jeremiah's analysis of the relative importance of systematic and historical factors in the ordering of lemmata, Book 5 is second to Book 2 in its prioritising of systematic concerns (M–R 4.315).

In the light of Book 5's dominant emphasis on physiological and biological causation, it is worth noting what is absent. In ch. 5.1 on divination, which as we saw is clearly out of place, the role of the divine can hardly be avoided, and the same can be said for the next ch. 5.2 on dreams. But already there it is limited to a single comment in the doxa of Herophilus (5.2.3). In the rest of the book, there is no reference to theological themes or to the divine, with the exception of a single reference to the cosmic god in ch. 5.20 on the genera of living beings (if our text based on Q is correct). It is hardly surprising, therefore, that in this chapter there is no reference to the theory of reincarnation. There is also very little mention of epistemology, except in the same chapter on ζῶα and a couple of remarks attributed to Diocles in A 5.14.3 and 5.29.2. The chapter on dreams (5.2) concentrates on how they come about, and not on their truth value. In a few chapters A also touches on the role of numbers, particularly the length of pregnancy (ch. 5.18) and the development of the fetus (ch. 5.21). Here it is quite striking how he refrains from using arithmological material, in marked contrast to parallel accounts elsewhere. He does make reference to astrological doctrines in a long and complex doxa explaining the in viability of eight-month old fetuses (5.18.6), but not with reference to the birth of twins (ch. 5.10).

But there is an unexpected presence. Two chapter headings diverge from the norm and contain an aorist verb rather than one in the present tense: ch. 5.19 on how the ζῶα came into being, and ch. 5.26 how plants grew. In addition there are a number of doxai—mostly attributed to Empedocles (5.7.1, 5.18.1, 5.19.4, 5.26.4, 5.27.1), but also one to Anaximander (5.19.3)—, which in their explana-

tions refer to cosmogonic and protological factors, including some quite bizarre doctrines. These doxai, which have parallels in Book 2, appear to be fossils from an early period of Greek scientific explanation which the doxographical tradition has preserved. We shall return to them at the end of the following section.

5 Sources: Proximate Tradition

By far the most important documents for studying doxographical traditions relevant to Book 5 are two quite different works. Censorinus in writing a birthday book for his patron in the year 238 CE (also used in the last chapter of Book 2) includes lengthy and detailed doxographies on a large number of topics relating to human life, starting with conception (ch. 4) and ending with the 'climactic age' of 81, the year of the death of 'the most holy figure of ancient philosophy', Plato (ch. 14.2). For eleven chapters in the sequence chs. 5.3–23 he offers significant and sometimes quite detailed parallels, including name-labels and doxai. Among these are chapters in which he reveals substantially more material than is found in what remains of Book 5, e.g. chs. 5.3, 5.5, 5.18 etc. In contrast the medical compilation falsely attributed to Galen, the *Definitiones medicae*, is not where one would usually look for doxography. But it has a section towards the end of the work, §§439–452, which offers brief outlines on key subjects of spermatology, embryology and gynaecology, including many doxai, though mostly anonymously presented (name-labels are only found in §§439–441 and 445). Parallel material to A is found in every chapter of this text for chs. 5.3 to 5.18 excepting 5.4, 5.12 and 5.14, and there are also four further chapters for which relevant material is found in other definitions (chs. 5.4, 5.24, 5.27, 5.29). Other later authors which provide useful parallels are Aulus Gellius (for Plato chs. 5.18 and 5.21), Tertullian who in the *De anima* ranges beyond psychology proper (see esp. chs. 5.24–25, 28), and Lactantius in the anthropological passages in his *De opificio Dei*.

It is not likely that the Latin authors just mentioned took their material directly from A or similar doxographical works. Aulus Gellius, Censorinus and Lactantius all mention Varro as an important source and it is indeed as good as certain that the parallel doxographical material was drawn from his *Logistorici*, and especially the treatise *Tubero de origine humana* (Cens. 9.1). Diels *DG* 186–198 studied the text of Censorinus in detail and argued that his source Varro drew on the *Vetusta placita*, a postulated earlier and richer version of the *Placita* as we find them in A. But this reduction to a single source is simplistic, inspired by 19th century fondness for the *Einquellentheorie*. Another vital author whom Diels cites is Cicero, but in his writings we find no material parallel to chs. 5.3–23

at all, only to chapters preceding (5.1–2) and following (5.24–25) the main body of the book. Diels also missed two further important witnesses. Philo, in the passage that yielded so much valuable evidence for Book 2 and 4 (see Introduction to Book 2, section 5, Introduction to Book 4, section 8), also unmistakably makes reference to a *doxa* in ch. 5.15, and elsewhere he also refers to a *doxa* in ch. 5.17, both on the subject of embryology. In addition, Diels makes only a ‘cavalier remark’ (M–R 3.149) on ps.Galen *Def.Med.* at DG 258 and did not exploit its rich store of parallels. Both these witnesses writing in Greek will of course not have derived their material via the Latin author Varro. However, in the summaries of the opinions of prominent Greek philosophers compiled by Hippolytus, on three occasions topics from Book 5 are referred to (A 5.7.4 Anaxagoras on male and female conception, Hippo on semen cf. ch. 5.3, Archelaus on animal intelligence cf. 5.20). Only in the first case is the *doxa* also found in A. Nevertheless a shared relationship to a common tradition may be assumed. Noteworthy too is that Clement of Alexandria, in a series of excerpts on logic appended as Book 8 of the *Stromata*, uses two parallel topics from this Book (ch. 5.15 on whether the embryo is a living being, 5.26 on whether the plant is a living being) as illustrations of how to treat *quaestiones* or προβλήματα. In the former case only positions are indicated, in the latter name-labels are added. There is also a short work preserved under the name of Galen which resembles a rhetorical exercise on the first topic arguing a particular position (θέσις) as indicated by its title Εἰ ζῶν τὸ κατὰ γαστρός. The Δικτυακά of Dionysius of Aegae as recorded by Photius contains fifty such θέσεις on medical subjects, of which the first two pairs are exactly parallel to chs. 5.3 and 5.5 (though differently formulated). These two works show that the topics in this book were traditional and could provide material for dialectical exercises.

Another key feature of Book 5, as we have already seen, is the presence of *doxai* attributed to doctors, whether by name or generically (οἱ ἰατροί). These number 26 in all (listed at M–R 3.533, 537–538), almost a quarter of the total. Aristotle had already affirmed that natural scientists and doctors had the topics of the first principles of health and disease in common (see on ch. 5.30). Diels DG 232 argued that originally the medical material in the *Placita* had been derived from a parallel *doxographical* tradition initiated by Aristotle’s pupil Meno which was later updated. However, the medical compendia available to us do not show a great overlap with the contents of Book 5. Prime among these is the *Iatrika* attributed to an unknown author who has received the name Anonymus Londiniensis. Many of the name-labels of both early Greek and Hellenistic doctors are held in common with the Aëtian *Placita*, but more specifically in ch. 5.22 on the elements of the bodily parts, 5.29 on fever and 5.30 on disease there are no exact parallels in content (similarly for the Anonymus

Parisinus, see on ch. 5.29). Another document, attributed to the Anonymus Bruxellensis, is more interesting because its subject is spermatology and there is much similarity in terms of the subjects treated. But name-labels are scarce and in the key passage on the nature of semen the author refers to doctors (as does *Def.Med.*), whereas A only cites philosophers (ch. 5.3). Other works that give access to material on doctors drawn from the proximate tradition are Celsus *De medicina* (on ch. 5.27), ps.Galen *Introductio sive medicus* (5.29), Soranus *Gynaecia* (on 5.3, 5.5 etc.), and ps.Soranus *Quaestiones medicinales* (5.27, 5.29).

How far back can this proximate tradition on topics of physiology and biology be traced? There are faint indications that Epicurus, like in the case of Books 2 and 3, may have drawn on doxographical material, at least in the organisation of his remarks on physiology (see the scholion cited on ch. 5.3 on the nature of semen). His later follower Lucretius too appears to follow well-worn paths in his statements on the subjects of heredity (cf. ch. 5.11) and sterility (cf. ch. 5.9, 5.13). Stoic doctrine, as witnessed by the summary of the φυσικὸς λόγος at Diogenes Laertius *V.P.* 7.133, also appears to be indebted to such organisational schemata (M–R 2.1.107–108). Earlier some fairly tenuous links with the writings of Theophrastus can be identified (5.19 on the eternity of animal species, 5.20 on Diogenes and 5.28 on Empedocles, both as summarised in the *De sensibus*). But there is also indirect evidence that points to early collections of material. Firstly, as noted above in section 3, there is the sheer preponderance of names and doxai from the Presocratic period (14 out of 35 names, 60 out of 114 doxai), with a particular predilection for Empedocles, whose presence in this book, as we have already noted in section 3, is quite dominant. Secondly and more specifically, there is the already noted curious series of ‘fossilised’ doxai which include cosmogonic and protological factors in their explanations. These would seem to indicate that at some stage, on a number of topics included in this book, distillations were made of material originally drawn at greater length from early poems and treatises which gave ‘scientific’ explanations in terms of the origins of the cosmos and the living beings that populated it. The Peripatos is the most logical place for this to have happened. But we also have to take into account other less specifically doxographical sources.

6 Other Source Material

Traditional themes such as the connection between sleep and death (ch. 5.24) and the ages of man (ch. 5.23) go back to the archaic period and poets such as Homer and Solon. But the first writers to express what we might call sci-

entific views on physiological and biological themes were the early Greek philosophers, with a pioneering role played, it seems, by Alcmaeon. Their poems and prose writings are for the most part lost, but with the assistance of later authors such as Aristotle, Plutarch and Galen we gain occasional glimpses into the original formulation of their views. This is particularly the case for Empedocles (chs. 5.7, 5.14, 5.18–19, 5.21–22, 5.26–28), but also for Parmenides (5.7), Anaxagoras (5.29) and Diogenes of Apollonia (5.21). The first relevant collection of writings which are fully preserved is the Hippocratic corpus. On many of the topics in Book 5 it provides interesting parallel information, e.g. on female semen (ch. 5.5), heredity (chs. 5.9–10, 5.12), the embryo (5.15), nutrition (5.27) and so on. In the case of two chapters the connections are more direct. In ch. 5.18 Hippocrates' followers and his son-in-law Polybus are referred to, and pronouncements of the latter on the viability of seven- and eight-month olds are drawn from the treatise *De octimestri partu* which in antiquity was attributed to him. In ch. 5.21 on the formation of embryos in the womb we can see that the author of *De natura pueri* was influenced by Empedocles' views and may himself in turn have exercised influence on the doctor Asclepiades in his differentiation of male and female embryos. But the Hippocratic view is not included in the chapter as it has come down to us.

About a generation later than these two Hippocratic works Plato in the *Timaeus* gives a detailed account of many features of the male human being, to which are appended briefer remarks on women and other living beings. In the main body of the book only views on semen (chs. 5.4–5) and the embryo (5.15) are included, but in the peripheral chapters we also find views on divination (5.1), the genera of ζῷα (5.20) and the relationship between plants and animals. The source for all these views is exclusively the *Timaeus*. Of much greater significance are the biological writings of Aristotle. Above all in the *De generatione animalium*, but also in the *De partibus animalium* and *Historia animalium*, we find discussions of almost all the Book's topics. But in determining the extent of his influence it is necessary to be more precise. Aristotle's biological works are wide-ranging, covering broad areas of the animal world. Book 5 focuses primarily, as we have seen, on human beings. It is above all in the organisation and general outline of biological and physiological topics that Aristotle's influence on the book's contents is most marked. For the majority of the chapter headings there are parallels in his works, as can be seen in the relevant listings in the Further Related Texts, section E(a)&(b). A noteworthy example is the actual title of *De generatione animalium*, Περὶ ζῶων γενέσεως, which is identical to the first part of the chapter heading of ch. 5.20. But for the actual content of the reported doxai the number of specific parallels is quite limited. This is the case for the views of philosophers earlier than Aristotle, but also for the doxai attributed

to the Stagirite himself. Of the ten doxai with Aristotle as name-label only in two cases is it at all likely that they may be traced directly to his own words, in A 5.18.4 to a text in *Historia animalium* 10 (if this book is authentic, see on ch. 5.9), and in 5.17.2 to a text in *Metaphysica* Δ. The *Placita* are thus proof of the continuing influence of Aristotle's biological works in the Hellenistic period, but do not necessarily show that they were being read. An intermediate stage in the process of reception has taken place.

As we have seen in the previous books, the *Placita* underwent substantial development during the Hellenistic period under the influence of new streams of philosophical and scientific thought. A is aware that on some issues Epicurus and his school take a distinct position, e.g. on the validity of divination (5.1.2) and the status of the heavenly beings (5.20.2), but mostly the founder is portrayed as following in the wake of the earlier atomists (in fact the doxa in divination is the only case where he is independent). Apart from Diogenes Laertius and Lucretius (already mentioned above in the previous section) we do not have the sources to trace further Epicurean influence in detail, but there is an unusual case at 5.12.3 where it seems that Epicurean terminology is used to formulate a Stoic doxa on mental *συνπάθεια* which might explain how children can resemble other people rather than their parents. The Stoa is more solidly represented in the book, but here too, in the absence of extant sources beyond doxographical accounts, we can only estimate the influence of Stoic ideas on the formulation of doxai. Certainly the quaestio of the corporeality of semen (ch. 5.4, note the key role of Zeno together with the atomist Leucippus starting off the chapter) and the emphasis on the role of *pneuma* in various physiological processes (chs. 5.15, 5.24) suggest such influence. The latter role is also credited to the Peripatetic Strato (chs. 5.4, 5.8, 5.24) and the doctors (chs. 5.8, 5.15, 5.29) and it is difficult to determine the extent to which these views have been reformulated in terms of Stoic doctrine. Very little is noticeable of the influence of Middle Platonist views which was on the rise in the period just before A put together his compendium, but mention may be made of the listing of the kinds of living beings in ch. 5.20 and the concomitant theology, which is consistent with the heavily Middle Platonist theology at 1.7.22, and also of the inclusion of Pythagoras combined with Plato in that same chapter (A 5.20.4), to which Aristotle is added in 5.4.2.

In the case of the doctors of the post-Aristotelian period too, beginning with Diocles and ending with Asclepiades, all their works have been lost and it is impossible to determine the provenance of the doctrines in the *Placita* or their authenticity. A striking case is on the infertility of women, treated in both chs. 5.9 and 5.13. The same view is credited to both Diocles and the Stoa, and we cannot be certain of the validity of the respective attributions (though Dio-

cles' credentials are superior). At A 5.14.3 on the sterility of mules a passage appears to be cited from Diocles verbatim, presumably a remnant of an earlier stage of the tradition when there had been direct access to his works. Later doctors can also shine light on certain topics. This is particularly the case for the great Galen, most notably in his *De semine* and *De foetuum formatione*. Galen is well acquainted with the dialectical method of the *Placita* (see the overview of Tieleman in M–R 4.453–472 and above, General Introduction section 5.2.1), but he appears to betray no direct knowledge of the doxai as compiled in A's Book. Other medical authors who can shed light on its contents are Soranus (esp. the *Gynaecia*, see on chs. 5.3–6, 5.9, 5.12, 5.16, 5.18), Aëtius medicus and Oribasius.

Finally we should point out that two chapters in Book 5 are of particular interest and value for understanding the tradition of the *Placita*. In ch. 5.7 on the conception of males and females we can see the layered nature of the sources that have come together in A's compendium: first the original works of the philosophers and doctors that provide the reports of original research (or speculation), next the organising talent of Aristotle and his school, and finally the specific conversion of the material into the schematism of the *Placita*, with its combination of name-labels and doctrines, which will have been produced in various iterations before reaching A and the works dependent on him. In ch. 5.18 on the viability of fetuses for differing terms of pregnancy we encounter six longer than usual doxai on a much discussed subject in antiquity, not only giving views of seldom cited thinkers, but perhaps also yielding some insight into earlier and fuller forms of exposition found in the *Placita* prior to the version of A, which in the case of Book 5 in its surviving form has unfortunately been even further reduced than elsewhere.

Commentary

A *Witnesses*

As discussed in the equivalent chapter of Book 1, for the title of the entire work and its individual books we must rely on the evidence of T, the only witness to cite the title of the original work and give the name of its author. The titles in P and those witnesses dependent on its tradition are expanded versions of the original title. The title at the head of this Book in P^B is similar to that of Book 4 in that it omits the preposition Περὶ at the beginning, but it does make a reference to the *epitome* character of the work. In Q's translation, as was the case for Book 2, the title is not translated, but only the number of the book and its author are indicated. There are no other witnesses to the title of this book.

The index is found in most mss. of P^B. In addition, one of the mss. of Q, Zāhi-riya (Damascus) 4871, contains a translation of the list and thus provides valu-

able additional evidence on the manuscript tradition. Daiber did not include it in his edition, but he has kindly provided the editors with a translation (see Appendix in vol. 4). On this translation and its source see further the Commentary on Book 1 titulus et index. Both Eusebius and Symeon Seth did not make use of this book, so unlike for the previous four books, they do not provide any additional evidence.

For the question whether A's text contained the index see Book 1 titulus et index Commentary D. On the practice of prefacing texts with tables of content and chapter headings see Book 1 titulus et index Commentary D(e).

C *Book Title*

See above, section A. On how this title relates to the title of the original work see Book 1 titulus et index Commentary C.

D *Analysis of the Index*

(1) For a discussion giving the reasons why we are convinced that A's original compendium contained these indices at the beginning of each book, see M–R 2.196–204 and Book 1 titulus et index Commentary D(6) and D(e).

(2) For the methodology of the reconstruction of the index see Book 1 titulus et index Commentary D(3). We argue that priority must be given to the chapter headings in the text of the chapters themselves, since A will have based his index on these when he compiled the work. It is thus to be assumed that the list of chapter headings in the index accurately reflects the chapter headings in the text of the Book.

(3) In the present book the chapter headings in the list of P^B correspond closely to those found in the body of the book, as is to be expected. The only case where the intra-textual heading has a reading not found in at least one ms. of the index is at ch. 5.11 where the singular ἡ ὁμοίωσις in the chapter heading corresponds to a plural αἱ ὁμοιώσεις in the pinax as recorded in the mss.

(4) Three of the headings in Q's list differ from their equivalent in P^B (and in the text of the book in Q himself), namely chs. 18, 19 and 24. Each case is different. For ch. 18 Q appears to have lengthened the heading based on the contents of the chapter. This may be another indication that he drew up his list based on the Book's contents rather than translating a list in his original (cf. our Commentary on the Index of Book 2, section D). For ch. 19 it looks like the heading in the index is an abridged version of the title of the chapter in the book itself. For ch. 24 he shares the longer heading with two of the manuscript families, but grammatically the resultant heading is awkward and it is likely that the words τῆς ψυχῆς ἡ σώματος have been copied across from the heading of the next chapter.

D(e) *Other Evidence*

For further discussion on the use of *pinakes* (tables of contents) in ancient works see Book 1 titulus et index Commentary D(e). See also the same chapter Commentary E for an extensive list of parallel texts relating to the compilation and use of *pinakes* (tables of contents) or indices of chapter headings.

In the section E Further related texts below, parallel to our presentation in Book 4 titulus et index, we present a limited number of texts in which subjects relating to the physiology of the body are described in terms more or less reminiscent of the list of headings in A's Book 5. In the case of Celsus, because he is introducing the different theories of medicine, the focus is wholly on questions of health and disease formulated in terms of causation. This concurs well with A's presentation in Book 5, in which—as noted in the Introduction, section 4—the majority of topics are formulated in terms of seeking after the cause. Pliny's list of topics is broader but much less organised (and in his treatment he includes almost no doxography as such). His index is formulated as a list of topics, usually in the nominative, but also using the preposition *de*, i.e. equivalent to the 'umbrella' formulation with Περί in the *Placita*.

indices of Photius and the Laurentianus ms. Because the chapter is lost, we do not know whether it may have contained material from the *Placita*. The addition of the words καὶ ὡς εἴη ἀναγκαία τῷ βίῳ καὶ ἡ τῶν μελλόντων πρόγνωσις (only in L, not in Photius) indicates that the contents of this chapter will most likely have had an ethical rather than a physical emphasis (compare *Ecl.* 2.27 Περὶ ἀνάγκης τῆς κατὰ τὸν βίον (also lost) with the chapters on necessity in A 1.25–26).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The only treatise on the subject that has survived is Cicero's *De divinatione*, written hurriedly as part of the sequence of his philosophical treatises. Its introduction is most valuable, not only because it contains a doxography showing important similarities to our chapter (esp. in §5), but also on account of its overview of literary treatments of the subject by the Stoa and other Hellenistic schools (§6). We give an analysis of the contents of Cicero's introductory section in relation to the present chapter below in section D(e). There can be no doubt that its analysis of philosophical views is indebted to the tradition proximate to the *Placita*, as is the case for his treatment of principles in *Luc.* 117 (cf. A 1.3), of theology in *ND* 1.25–41 (cf. A 1.7), of psychology in *Tusc.* Book 1 (cf. A 4.2–7 and esp. 4.9) etc; see further above at the relevant chapters, all at Commentary B.

Other material on this subject that reveals a link with the wider doxographical tradition is scarce. The Stoic definition given by Arius Didymus in his ethical doxography (text below section E(a)§1), like §1 in our chapter, emphasises the connection with the divine but only mentions the kinds (εἶδη) of divination without specifying them further. Sextus Empiricus at *M.* 9.132 links the subject directly to the question of the existence of the gods (cf. ch. 1.7) and specifies four kinds of divination (though not called as such), which closely resemble the list in §1 (but bird-watching not included). On this text see also Section D(d) below.

(2) *Sources.* The art and practice of divination in its various forms occupied a central place in Greek culture from the archaic period onwards, declining in influence after the fourth century but retaining a presence until in late antiquity it finally wilted under the assault of Christianity. Already in the fifth century its practices were subjected to philosophical critiques, leading to mixed responses as is witnessed by the contents of the present chapter. We know nothing about the content of Xenophanes' critique. Plato's nuanced pronouncements on the subject at *Tim.* 71e–72b, which focuses on the role of dreams and visions, were highly influential. The Stoic contribution to discussions was particularly fecund and influential; see the still always useful

overview of Wachsmuth (1860). On philosophical critiques of divination in general see Burkert (2005) 48–51; broader surveys in Pfeffer (1976), Struck (2009), but without reference to this text.

C Chapter Heading

The umbrella formula Περὶ x is found in all witnesses. It frequently occurs as a book title, e.g. in Cicero's work *Dñv.* and in the treatises cited at D.L. 9.147. Here it covers the question types of existence and substance.

D Analysis

a Context

There is no introductory statement regarding the contents of the book, unlike at the beginning of Books 1–4. So we must presume that it continues the treatment of the τὰ κατὰ μέρος introduced at the beginning of Book 4. The basic division in terms of contents between the two books is not clear-cut, but it can be roughly formulated as comprising psychology (predominantly human) in Book 4 and physiology (human and animal) in Book 5, or in ancient formulation between περὶ ψυχῆς and περὶ ζῴου. From that perspective both 5.1 on divination and 5.2 on dreams might have been better placed in Book 4 (but see the comments at ch. 4.23 Commentary D(a)). We can compare the beginning of Book 4, where the first chapter clearly belongs with the previous book; see ch. 3.16 Commentary D(a), ch. 3.17 Commentary D(a), ch. 4.1 Commentary D(a), and the Introduction to Book 5 section 2.

b Number–Order of Lemmata

The first lemma is of particular interest because of the major divergence of the witnesses at no less than three places.

(1) In the case of the first reason attributed to Plato and the Stoics for accepting divination we read κατὰ τὸ θεόπεμπτον εἶναι based on P^G, in preference to the briefer reading of P^B κατὰ τὸ ἐνθεον. As noted by O. Primavesi (unpublished paper), the strange rendering of Q, *gemäß der göttlichen fünften Substanz*, can be explained through a misconstrual of the Greek by the translator who read κατὰ τὸ θε[ῖ]ο[ν]πεμπτὸν εἶναι instead of κατὰ τὸ θεόπεμπτον εἶναι.

(2) The phrase κατὰ θεϊότητα τῆς ψυχῆς ὅπερ ἐστὶν ἐνθουσιαστικόν was regarded by Diels, followed by Mau and Lachenaud, as a gloss (or doublet) of the previous phrase. But this is certainly incorrect, for these words are attested by the papyrus and are also present in G and Q. All three witnesses add it as a second reason for acceptance of divination, making a distinction between ἐνθεαστικόν and ἐνθουσιαστικόν, the former emphasizing the visionary aspect, the latter the aspect of divine possession. On ἐνθεαστικόν see further below sec-

tion D(e). These two reasons for accepting divination recur by implication in the fourth lemma.

(3) In P^B only the further aspect of the interpretation of dreams (τὸ ὄνειροπολικόν) is added. Here too P^G and Q supply additional material, both including divination of the stars (τὸ ἀστρομαντικόν) and the inspection of birds (τὸ ὀρνεοσκοπικόν). These should both be included in the text. But the small papyrus snippet points to even more material. In an unpublished paper O. Primavesi has suggested the following text for the papyrus, incorporating the material identified by Barns and Zilliaceus (letters in bold type present in the papyrus; see text above under *testes primi*):

Πλάτωνκαί οἱ Στωικοὶ τὴν μαντικὴν εἰσάγου
 σικαὶ γὰρ θεόπεμπτον εἶναι ὁ περὲς τὴν ἐνθεα
 στικὸν καὶ κατὰ θιότητα τῆς ψυχῆς ὁ
 περὲς τὴν ἐνθουσιαστικὸν καὶ τὸ ὄνειροπο
 5 λικὸν καὶ τὸ ἀστρομαντικὸν καὶ τὸ ὀρνεοσκοπι
 κὸν καὶ τὸ ἱεροσκοπικόν. οὐ τοι τὰ
 πλεῖστα μέρη τῆς μαντικῆς ἐγκρίνουσι
 Πυθαγόρας δὲ μόνον τὸ θυτικὸν οὐκ ἐγκρί
 νει Ἀριστοτέλης καὶ Δικαίαρχος τὸ κατ' ἐν
 10 θουσιασμὸν μόνον παρὰ εἰσάγουσικαὶ τοὺς
 ὄνειρους ἀθάνατον μὲν εἶναι οὐ νομίζοντες
 τὴν ψυχὴν θείου δέ τινος μετέχειν αὐτήν.

This reconstruction demonstrates that, contrary to our view in M–R 1.129, the papyrus does not have the term τὸ ἱεροσκοπικόν instead of, but rather *in addition to* τὸ ὀρνεοσκοπικόν, thus revealing four further aspects of divination compared to just the one in P^B and three in P^G and P^Q. Admittedly line 5 with this term is the longest (38 letters), but only marginally so (compare line 1 (37), line 2 (36), line 11 (35) etc.). Primavesi's reconstruction is fully convincing and we have included it in our text above. The reason for the omissions will in both cases have been haplography. Jas (2018a) 322 raises the possibility that in the papyrus τὸ ἱεροσκοπικόν replaces the original τὸ ὀρνεοσκοπικόν and concludes that this is a question the future editor of P will have to decide.

A further reason for accepting the majority readings of P^G, P^Q and P^P against P^B in this lemma is that their evidence coheres well with further doxographical material found in Cicero and other authors. In the case of the fourth lemma on Aristotle and Dicaearchus, however, P^G omits one of two aspects of divination mentioned in P^{BQ}, so here he has followed his frequent practice of reducing the material in P that he had in front of him.

c Rationale–Structure of Chapter

The structure of the chapter as preserved in P is not difficult to divine. The first lemma introduces the subject and outlines a maximum view of what divination covers. As the final words of the lemma indicate, the emphasis comes to lie on the parts of *μαντική*. As emphasized in the Stoic doxography at D.L. 7.149, it is a *τέχνη* (already affirmed at Eur. *Phoen.* 772, Pl. *Plt.* 260e, Arist. *Pol.* 1274a28), and so can be divided into parts.

To start with, two kinds of divination are privileged, through divine messaging (*κατὰ τὸ θεόπεμπτον*) and through divine possession. Implicit in the former is perhaps the special role of dreams, although this is not made explicit (cf. the doxography in Cicero to be discussed below in section D(e)). The recognition of divination in the case of these two elements is attributed to Plato and the Stoics. In the remainder of the lemma the scope is then widened to four kinds of divination, of which the kind through dreams is mentioned first. The second lemma goes to the opposite extreme, with every kind of divination rejected. In the third only one of the kinds introduced at the outset is not included, if we take *τὸ θυτικόν* to refer to *τὸ ἱεροσκοπικόν* in §1. This is further evidence in favour of the reading of the papyrus. The final lemma only admits two of the five (or six) kinds, the same two with which the first lemma commenced.

As often in P, the contours of a diaeresis are thus fairly clear, but we may wonder whether his process of epitomization has obscured a clearer original. The combination of labels in the first lemma—Plato and the Stoics—is awkward. The first part up to *ἐνθουσιαστικόν* is clearly based on the well-known text at *Tim.* 71e, though with some embellishment (and wholly deleting the aspect of Platonic irony). The next part is purely Stoic, as parallels in Cicero and Diogenes Laertius show (see below, section E(a)§1). In the final sentence, as Diels ad loc. noted, *οὗτοι* must refer to the Stoics. It is possible that P combined two separate lemmata in A (the combination of these two name-labels on their own occurs only here in P—in both P 2.17.4 and 5.24.4 one of the two has to be emended away—and never in S or T). Unlike in the parallel text in Cicero, P does not start with the view denying the validity of divination. This is what we might have expected, since the quaestio addressed in the chapter is that of existence and substance, and so it is logical to commence with a view in which the existence of the phenomenon is denied; cf. the chapters 1.7 on the gods, 1.18 on the void, 1.24 on coming to be and passing away etc. The contrasting view of Pythagoras (note the adversative *δέ*) would follow the first lemma better than the second.

It is difficult to determine how exactly the final lemma differs from the view ascribed to Plato and the Stoics in the first. In a text that may have been a source for the doxa, *Div.Somn.* 2 463b12–14, Aristotle claims that, since liv-

ing beings other than humans also dream, dreams are not be sent by a god, but are daemonic since nature is daemonic. The implication is that this happens at a sub-rational psychic level, and not at the rational or supra-rational level of νοῦς (cf. A 4.7a.1). The final part of the lemma similarly qualifies the soul as not fully divine (in contrast to the θεϊότης of the soul in §1). So it seems that divination is introduced at a lower level than Plato and the Stoics are said to affirm, with correspondingly a lower truth value. Could this be implied by the difference in the two verbs εἰσάγουσι and παρεισάγουσι? The latter verb might be paraphrased as ‘they concede the existence of’. See further the discussion by Sharples (2001a) 163–167 on the interpretation of Dicaearchus’ doxa. He focuses mainly on the difficulties of interpreting the texts on him in Cicero.

The diaeresis can thus be summarized as follows: §1 affirmation of existence of divination in many forms; §2 total rejection; §§3–4 affirmation of certain parts, which implies rejection of others. It should be noted that the diaeresis would have allowed for more possibilities if all the different types of divination introduced in the first lemma were discussed. In the absence of S we do not know whether the chapter originally had more lemmata. But it may be suspected that it did.

d Further Comments

Individual Points

§1 For the text in this lemma, see our discussion above in section D(b). It may be noted that ἐνθεαστικὸς is a *vox Platonica*, used by Plato of the poets at *Leg.* 3.682a in describing how Homer and other poets can hit on the truth. The usual translation is ‘inspired’, but given the context of divine messages presumably sent through dreams, it is worth noting that the root verb θεάομαι means ‘to see’, so we translate ‘visionary’. θεόπεμπτος, however, is not found in Plato. In extant sources it is first used by Aristotle in the text cited above when he denies that dreams can have a divine origin (*Div.Somn.* 2 463b13).

The reading τὸ ἀστρομαντικόν in the papyrus (not found in P^B) is supported by Q’s translation *astrologische Wahrsagerei*. G’s reading τὸ ἀστρονομικόν can be regarded as a normalisation or vulgarisation, since the other term is exceedingly rare in extant Greek literature, there being only two independently recorded examples, one in a report at Diodorus Siculus 36.5.1 on the Sicilian revolutionary Athenion (the term very likely to have been drawn from Posidonius), the other in a text at Sextus Empiricus *M.* 9.132 on divination linking its existence to that of the gods. The latter text refers to four aspects of divination: θεοληπτική, ἀστρομαντική, λογική and ἡ δι’ ὀνείρων πρόρρησις. The parallelism with A’s text is strong and a Stoic source is likely, as Von Arnim saw (*SVF* 2.1018).

Given this parallelism it is tempting to follow Fabricius (followed by Bury in the LCL, but not by Von Arnim or Mutschmann) and read *θυτική* instead of *λογική* (*τὸ θυτικόν* in §3 picks up *τὸ ὀρνεοσκοπικόν καὶ τὸ ἱεροσκοπικόν* in §1).

e Other Evidence

The doxography at the beginning of Book 1 of Cicero's *De divinatione*, the only work specifically dedicated to the subject that has survived, reveals important correspondences with A's chapter. Its contents can be summarized as follows:

- §1 subject and terminology introduced—etymologies of *divinatio* and *μαντική*
- §§2–3 its existence shown by evidence of the nations
- §4 Romans are convinced the mind is divinely inspired in two ways, through *furor* and through dreams
- §5a the ancients put forward arguments to prove the truth of divination
- §5b only Xenophanes and Epicurus dismissed it
- §5c list of philosophers who accepted it—Socrates and his school; Zeno and his school; Pythagoras (who wished to be an augur himself); Democritus; Dicaearchus (who accepted only divination through dreams and *furor*)
- §6 Stoics defend nearly every kind of divination, but Panaetius remained sceptical
- §7 Cicero himself, esp. in the light of the many arguments against the Stoics by Carneades, will follow Academic practice and compare the arguments on both sides.

We note the following. (1) The view denying divination is attributed to the same two philosophers Xenophanes and Epicurus in both doxographies, but as we already noted above Cicero, following the practice also found in the *Placita*, places it first, not second as in P. (2) The main representative of the positive view are the Stoics, linked to the Old Academy and the Peripatetics, but Plato is not mentioned except for the etymology of *μαντική* in 1.1 (*Resp.* 571c–572b is cited later at 1.60). Various members of the school and their writings are mentioned, including a deviant view (Panaetius). As noted by Diels *DG* 225, this listing deviates from the method of the *Placita* (it is closer to what we find in Diogenes Laertius). (3) Cicero observes the two main sources of divine inspiration, but does not give a clear outline of the various kinds of divination. (4) Cicero's mention of Pythagoras contradicts what we find in P. (5) Dicaearchus is mentioned and the two kinds of divination he accepts agree with P (they are

further explained at 2.100). Aristotle is not named here but the mention later in 1.81 is consistent with P. (6) The explicit mention of the New Academy for the method that Cicero will apply finds no parallel in P.

As already noted by Diels *DG* 224 and Pease (1920–1923) 1.19–20, the two doxographies show sufficient correspondences, both in name-labels and doxai, to justify the conclusion that they are indebted to the same tradition. Importantly, the same method of diaphonia and diaeresis can be discerned in both texts. Though older, the tradition will have been significantly developed in the period following Carneades and Panaetius. A more recent philosopher mentioned by Cicero is Posidonius, but he might have added this name himself (Cicero calls him *noster*). A does not contain any names later than Epicurus, but the parallel texts in Diodorus and Sextus that were noted above in section D(d) suggest his sources may have contained such material. It must again be emphasized that P's text may well have been abridged from a fuller original, but of course this was most likely the case for A himself as well. Pease loc. cit. downplays the similarity. It is true that the listing of Stoics §6 'differs from the custom of the *Placita*,' showing a greater resemblance to the clustering of references that we find in Diogenes and AD (cf. the *Περὶ αἰρέσεων* genre) or Philodemus (*Successions* literature). But this all can be regarded as belonging to the proximate tradition, and there is no need to assume that Cicero simply took over a single source for most of this section, as Pease does. The most recent commentary on Book 1, Schultz (2014), does not analyse the passage in any detail and makes no reference to our text.

E Further Related Texts

a Proximate Tradition

General texts: Cicero *Div.* 1.4–7 *et cum duobus modis animi sine ratione et scientia motu ipsi suo soluto et libero incitarentur, uno furente, altero somniantem ...* (5) *atque haec ... veteres rerum magis eventis moniti quam ratione docti probaverunt. philosophorum vero exquisita quaedam argumenta, cur esset vera divinatio, conlecta sunt. e quibus, ut de antiquissimis loquar, Colophonius Xenophanes unus (21A52 DK), qui deos esse diceret, divinationem funditus sustulit; reliqui vero omnes praeter Epicurum (Usener fr. 395) balbutientem de natura deorum divinationem probaverunt, sed non uno modo. nam cum Socrates omnesque Socratici Zenoque (FDS 462) et ei qui ab eo essent profecti, manerent in antiquorum philosophorum sententia vetere Academia et Peripateticis consentientibus; cumque huic reo magnam auctoritatem Pythagoras iam ante tribuisset, qui etiam ipse augur vellet esse, plurimisque locis gravis auctor Democritus (68A138 DK) praesensionem rerum futurarum comprobaret, Dicearchus Peripateticus (fr. 14 Wehrli, 31A Mirhardy) cetera divinationis genera sustulit, somniorum et furoris reliquit. Cratippusque, familiaris noster, quem ego parem*

summis Peripateticis iudico, isdem rebus fidem tribuit, reliqua divinationis genera reiecit. (6) sed cum Stoici omnia fere illa defenderent, quod et Zeno (SVF 1.172) in suis commentariis quasi semina quaedam sparsisset et ea Cleanthes (SVF 1.550) paulo uberiora fecisset, accessit acerrimo vir ingenio, Chrysippus (SVF 2.1187), qui totam de divinatione duobus libris explicavit sententiam, uno praeterea de oraculis (cf. SVF 3 p. 205 lxv), uno de somniis (cf. SVF 3 p. 196 xi); quem subsequens unum librum Babylonius Diogenes edidit (SVF 3. Diog. Bab. 35), eius aditor, duo Antipater (SVF 3. Antip. 37), quinque noster Posidonius (F 26 E.-K., F371b Theiler). sed a Stoicis vel princeps eius disciplinae, Posidonii doctor, discipulus Antipatri, degeneravit Panaetius (test. 137 Alesse); nec tamen ausus est negare vim esse divinandi, sed dubitare se dixit. quod illi in aliqua re invitissimis Stoicis Stoico facere licuit, nos ut in reliquis rebus faciamus, a Stoicis non concedetur? praesertim cum id, de quo Panaetio non liquet, reliquis eiusdem disciplinae solis luce videatur clarius. (7) sed haec quidem laus Academiae praestantissimi philosophi iudicio et testimonio comprobata est. etenim nobismet ipsis quaerentibus quid sit de divinatione iudicandum, quod a Carneade (F9 Mette) multa acute et copiose contra Stoicos disputata sint, verentibusque, ne temere vel falsae rei vel non satis cognitae adsentiamur, faciendum videtur, ut diligenter etiam atque etiam argumenta cum argumentis comparemus, ut fecimus in iis tribus libris, quos De natura deorum scripsimus. nam cum omnibus in rebus temeritas in adsentiendo errorque turpis est, tum in eo loco maxime, in quo iudicandum est, quantum auspiciis rebusque divinis religionique tribuamus; est enim periculum, ne aut neglectis iis inopia fraude aut suspectis anili superstitione obligemur. Sextus Empiricus M. 9.132 (SVF 2.1018) εἰ μὴ εἰσὶ θεοί, οὐδὲ μαντική ὑπάρχει, ἐπιστήμη οὖσα θεωρητική καὶ ἐξηγητική τῶν ὑπὸ θεῶν ἀνθρώποις διδομένων σημείων, οὐδὲ μὴν θεοληπτική καὶ ἀστρομαντική, οὐ λογική [θυτική conj. Fabricius and others], οὐχ ἡ δι' ὀνείρων πρόρρησις. Nemesius NH 12 68.9–11 Morani τοῦτο (sc. τὸ διανοητικόν) δὲ ἐστὶ τὸ καὶ διὰ τῶν ὀνείρων θεσπίζον ἡμῖν τὸ μέλλον, ἥνπερ μόνην ἀληθὴ μαντείαν οἱ Πυθαγόρειοι λέγουσιν εἶναι τοῖς Ἑβραίοις ἀκολουθήσαντες.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

In addition to the three usual witnesses for Book 5, P^B, Q and G, the chapter was also partially utilized by L and Ps, giving us some helpful readings. Previous editors, with the exception of Von Staden, seem ignorant of this additional evidence.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The most interesting text that can shed light on the doxographical treatment of the subject is found in an unusual place, in the *Scholia* to Lucan's *Bellum civile* edited by Usener in 1869 and included by Diels in his *Prolegomena* at *DG* 198; see text below in section E(a) General texts. The passage records three views on the origin of dreams attributed to Varro, Epicurus (cf. §1) and Plato. The name of the Roman polymath seems odd in this list. Usener ad loc. rightly points out that one of his works may have been the source of the doxography and that his name may have replaced that of a Greek philosopher (he suggests Empedocles). The parallel to A is so apposite because it focuses completely on the physical causes of dreams. The Epicurean doxa recalls that of Democritus in A's chapter. It does not appear that the views are organised by means of a diaeresis. If a diaeresis between internal and external causes is intended, it is not made at all clearly.

Other texts to focus on the sources of dreams are found in Cicero *Div.* 2.120, 139, which give a clear diaeresis between internal and external sources for dreams, with Democritus again representing the latter. At 2.126 he allows for 'another cause', with the implication that God might be the source. This approach is taken up by Tertullian, who in *de An.* 47 states that dreams emanate from demons, from God, from nature acting on the soul, or from a peculiar ecstatic state. In the previous chapter he is more concerned with the truth value of dreams and refers to a large number of ancient authorities, including Strato. But the details of A's doxai are not included.

(2) *Sources.* There are brief references to the subject of dreams in Plato *Tim.* 45e–46a, 71e–72a, *Resp.* 571c–572b, but the first extant treatise on the subject is Aristotle's *Περὶ ἐνυπνίων* (*Parv.Nat.* 458a–462b). It contains no references to the views of other thinkers. In the next brief treatise *De divinatione per somnum* (*Parv.Nat.* 462b–464b) there is a discussion of the atomist explanation of Democritus (464a5–12, puzzlingly absent in DK) in terms of εἴδωλα and ἀπόρροιαί, cf. §1.

A further much discussed subject is the classification of the various kinds of dreams. The classification attributed to Herophilus in §3 is the earliest example.

Von Staden claims (1989, 308) that ‘with his tripartite classification of dreams Herophilus seems to have launched a remarkably rich Hellenistic and patristic tradition of dream theory’ and that his ‘attempt to provide a systematic classification of dreams by origin seems to represent something novel and unusually influential.’ This may in general terms be correct, but does not mention that in later traditions the various classifications have differing points of emphasis. Posidonius (cited by Cicero) and Philo (who adapts for exegetical purposes) both offer a typology of the various kinds of dreams, but differ from Herophilus in focusing on divine-sent dreams only (his first category). The tradition of dream classification continues through to late antiquity (Calcidius, Macrobius). On the whole it dwells on the truth-value of dreams rather than their physical and physiological causes. For this reason we have not included the relevant texts in the Proximate tradition below but among other parallel texts; see section E(b) General texts. See further the discussion in D(e) below.

C Chapter Heading

All the witnesses are in agreement. This chapter is the first in the book to have a heading starting with $\pi\acute{\omega}\varsigma$, dealing with the sub-question *unde* and the question type of cause $\delta\iota\alpha\ \tau\acute{\iota}$, which is the dominant type in Book 5 with 11 examples (also chs. 6–8, 10, 12, 13, 16, 24, 26, 29; also in second part of heading chs. 19, 23). See further Introduction to Book 5, section 4. Here we have the combination with the verb $\gamma\acute{\iota}\gamma\upsilon\omicron\mu\alpha\iota$, which occurs no less than 7 times, at chs. 8, 10, 12, 13, 24, 29 (and in 5.7 with $\gamma\epsilon\upsilon\upsilon\acute{\nu}\alpha\tau\alpha\iota$). Elsewhere it occurs only at chs. 1.4, 2.19, 3.17 and 4.11; see further above, ch. 1.4, Commentary C. Aristotle uses the formula for the subject of the dream at *Insomn.* 2 459a23.

D Analysis

a Context

The subject of the chapter follows on quite naturally from ch. 1, where dreams are mentioned by implication in §1 and explicitly in §3, there being in Greek thought a close connection between the interpretation of dreams and the art of divination. Like ch. 1, this chapter too might have better been placed among the psychological subjects of Book 4. See further our comments at ch. 4.23 Commentary D(a). It is intriguing that the scholion on Epicurus *Ep.Hdt.* preserved at D.L. 10.66 gives a kind of summary of psychological and physiological subjects (text below under section E(a) General texts). The occurrence of sleep is mentioned after the discussion of the soul and preceding the mention of semen. The sequence is reminiscent of the *Placita*, something like an early version of which Epicurus may have utilised; cf. Runia (2018), on this text 411–412. In A, however, the subject of sleep is not taken up until ch. 5.24.

b Number–Order of Lemmata

There are just three lemmata, each with a single name-label. In the absence of further evidence the order in P must be retained. As we shall in the next subsection, it is likely that A's original chapter would have included further doxai.

c Rationale–Structure of Chapter

The diaeresis with which the chapter as it has come down to us begins is between external and internal causes of dreams, as indicated in the first two lemmata. It can be paralleled in an introductory passage in Artemidorus *Onirocrit.* 1.6 on the cause of dreams (πότερον ἔξωθεν ἡμῖν ἐστὶ τοῦ δνειρώσσειν ἢ αἰτία ὑπὸ θεοῦ γινομένη ἢ ἑνδον αἰτιόν τι, ὃ ἡμῖν διατίθῃσι τὴν ψυχὴν καὶ ποιεῖ φύσει συμβεβηκὸς αὐτῇ), which he sets aside as not relevant to his concerns. The first lemma attributed to Democritus explains dreams through the manifestations of *eidola*, presumably from an external source (see also the reports in Cicero and Plutarch cited below in section E(a) & (b)). The difficult second lemma attributed to Strato focuses on an internal source, i.e. the altered activity of the mind during sleep.

The third lemma recording the view of the Alexandrian physician Herophilus takes a different approach and gives a classification of three different kinds of dreams. This doxa may have at least partly the notion of dream interpretation as a τέχνη in mind, thus linking up with the previous ch. 5.1 on divination. Certainly the 'divinely inspired' (θεόπνευστοι) kind recalls §1 and §4 in ch. 5.1. These dreams occur 'by necessity', i.e. without a human contribution, and are distinguished from the 'natural' kind (φυσικοί) which are formed in the soul (cf. the doxa attributed to Strato). As Kessels notes (1969, 416), the usual sense of φυσικός as 'arising from natural (or physical) causes' suits the context well. The third kind is called 'mixed' (συγκραματικοί) and they occur spontaneously through the impact of *eidola*, but not necessarily external ones as in the Democritus lemma. What is mixed is presumably the activity of the soul, which subconsciously determines what it wishes to see, and the presence of available *eidola* from past experiences. There is also an implicit division in the Herophilean doxa between external, internal/natural, and mixed internal/semi-external (*eidola*), but this introduces the further complication of two different kinds of external sources for the dreams.

It is surely surprising that, in contrast to the previous chapter, no doxai are included which refer to the views of Plato and Aristotle included in various doxographical accounts. We may contrast Artemidorus in the passage cited above, who says he does not inquire into whether the cause of dreams is external or internal, 'as Aristotle does', referring to his view that dreams are not directly God-sent (texts below section E(a) General texts). Such lemmata may

well have been epitomized away by P, though he usually shows a preference for such important names, as noted at M–R 1.190.

It is important to note that A, to judge by P's evidence, focuses on the physical aspects of dream theory and shows only a very limited interest in the epistemological aspect, i.e. the truth value of dreams, which is the chief concern of writers such as Cicero and Tertullian (see further section D(e) below). The contrasts between 'by necessity', by psychic activity and 'spontaneously' in §3 may have epistemological consequences, but these are not spelled out. This is consistent with the approach taken in the psychology of Book 4, where the emphasis also falls on the physical and mechanistic aspects of cognition (with some exceptions e.g. chs. 4.9, 4.12). It must constantly be borne in mind that A's treatise is a *physikos logos*, which determines its basic approach. This means that the specifically epistemological aspects of its subjects will be underplayed. We note too that there is only a single reference to divine inspiration in A (§3 dreams that are θεόπνευστοι), in contrast to other texts in which the theological aspect is dominant; see further below section D(e). It is also basic to the *physikos logos*, as A understands it, that theology is part of physics, but approached in what we might call a secularizing spirit; see above, ch. 1.6 Commentary D(d)§1[38–54], 2.6 Commentary D(e) and further Mansfeld (2013a).

d Further Comments

Individual Points

§2 In the absence of further information relating to Strato's views, it is impossible to determine the exact text of his doxa with any certainty. We note the following:

(1) One might expect ἀλογῶ κινήσει rather than ἀλογῶ φύσει in the light of quotations from Strato's Περὶ κινήσεως preserved in fr. 41 Sharples (= Simp. in *Phys.* 964.29–965.19). It is possible, however, that A wished to emphasize the 'natural' origin in contrast to a higher noetic or divine source (admitted by Strato in the same fragment).

(2) In P^{BQ} τῆς διανοίας is the subject of the two participles that follow, whereas G adds τῆς ψυχῆς as their subject. Fr. 41 Sharples demonstrates that the mind's activity is regarded as psychic activity, so G's reading is best seen as a paraphrasing clarification of the text in P.

(3) Primavesi in his unpublished edition of the text of this chapter largely followed the version of G, which differs at various points from the other witnesses. He thus follows G in placing the doxa in *oratio recta*, placing a colon after the name-label, i.e. Στράτων· ἄλλη τις φύσις ... Such a practice occurs comparatively rarely elsewhere, e.g. for definitions at A 1.23.1–3, 1.25.1, 5.3.1, but not also for an argument at 2.5.1. However, the meaning differs little compared to the text in P

and Q which we have retained. For the final phrase he modified G's transmitted text and offers the conjecture γνωστικῶς for τῷ γνωστικῷ (perhaps supported by Q and cf. G γνωστικῆς). This is attractive, since it is difficult to see what τὸ γνωστικόν can be in this context and the adverb indicates how the mind can have seemingly rational thoughts which in fact are not rational. Sharples' rendering 'is affected by the cognitive [power]' is not convincing. Wehrli adduces a reference to the judging faculty (τὸ ἐπικρίνον), which is restrained or has its own movement at Arist. *Insomn.* 3 461b5–7, but that leads the soul to be deceived in thinking that the image it sees is real, which differs from what Strato appears to affirm. We have incorporated Primavesi's conjecture in our text.

§3 This doxa too gives rise to a number of textual problems.

(1) The witnesses are sharply divided on whether we should read θεοπνεύσους or θεοπέμπτους in the first line. Lydus' evidence shows that the latter was already present at an early date. The former is the *lectio difficilior* because the latter reading could easily have been introduced under the influence of 5.1.1 (where we have preferred G's reading κατὰ τὸ θεόπεμπτον εἶναι to P^B κατὰ τὸ ἐνθεον). The term is admittedly rare in non-Christian texts, but is found e.g. at Herodian at *Gramm. Graec.* 3.2 655.2.

(2) The two readings συγγραμματούς in P^B and συγκριματούς in G are both *hapax legomena*. Both Kessels (1969) 422 and Schrijvers (1977) 17 prefer G's reading, the former interpreting it as 'physiological' or 'somatic', the latter as 'composite'. But in the latter case it is hardly different to the reading of P^B, which can be retained.

(3) Diels' conjecture ὁρώντων in the final phrase is perhaps a little weak compared with P^B ἐχόντων (taken over by Von Staden), but it is supported by Q and by G's reading ἐρώντων.

e Other Evidence

As discussed above in section B, there is a substantial body of texts setting out classifications of dreams, thus continuing the early attempt of Herophilus recorded in §1. Posidonius (in Cicero) and Philo discuss the kinds of divine-sent dreams only, both mentioning the role of the soul or the mind in some of the alternatives (texts below section E(a) General texts). Both might be thought to be adapting the basic division between dreams that come from outside (i.e. God or demons) and those that appear internally via the soul (whether or not it is inspired). But their approach differs from that of A (and also Tertullian) because their starting-point is divine-sent dreams only, not dreams in general. Von Staden's discussion (1989, 307–310) on the Herophilean doxa is flawed because he does not allow for the differences between Herophilus' and Posidonius' classification, namely that the latter focuses on dreams involving

divine impulse only. The double diaeresis in Artemidorus *Oneir.* 1.1 (between premonitory *ὕνιοι* and non-premonitory *ἐνύπνια*, the latter being divided into psychic, somatic and psychosomatic kinds) also differs, in spite of superficial resemblances (and a very similar erotic example). As the examples show, the tripartition is simply based on the subjects dreamt about, and not the source of the dreams. Extended later texts are found in Calcidius and Macrobius. The former presents a veritable mini-treatise on dreams and starts with a doxography giving the views of Aristotle and Heraclitus/Stoics, before moving on to his main subject Plato. Here too the emphasis is primarily on divinely sent dreams, and much less on the physiological and psychological processes outlined however briefly by our author. Calcidius postulates a connection between Plato's views and the *philosophia Hebraica* (which may be a reference to Philo). Waszink (1941) and (1975) lxviii argues that the intermediary source of this particular reference may have been Numenius. The section chs. 250–256 as a whole he (1975, 260) derives from Porphyry. A text in Augustine *Ep.* 162 also distinguishes between dreams that are sent by God or by angels and those that arise in the soul.

There has been much scholarly discussion on ancient dream classification. In addition to the studies of Waszink and Von Staden mentioned above, see also Kessels (1969); Schrijvers (1977); Dodson (2003); Torallas Tovar (2014). In these studies the main focus of interest is the source and truth-value of dreams rather than their physical and psychological mechanism as analysed in Aëtius. For this reason the Herophilean doxa receives considerable attention, but not Aëtius' chapter as a whole.

Commentary

A *Witnesses*

P^B and Q transmit six doxai, which perhaps because of their relative brevity are all quite faithfully retained in G. A papyrus fragment contains snippets of the last two doxai joined with the first lines of the next chapter. The remaining letters are of no value for determining the text of the final phrase of §6.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* There are three doxographical passages in the proximate tradition which show resemblances to A's chapter. Censorinus, in moving from the question of human origins (ch. 4), to that of human birth (ch. 5), first notes that the 'professors of wisdom' disagree on where semen comes from and gives three views: (a) from both left and right parts of the body (Parmenides); (b) from the marrow (Hippo); (c) from the whole body (Anaxagoras Democritus Alcmaeon). We note that the question of 'where it comes from' is basic to A's approach, although only explicitly expressed in §6. The second, a very brief doxography in ps.Galen's *Definitiones medicae*, is valuable because it gives a clear diaeresis of two (or rather three) of the positions taken in A's chapter and also replicates two name-labels, one for each position (Plato, Democritus). A similar diaeresis is found in Lactantius, with the views attributed anonymously.

As already noted in our Introduction to Book 5, these three documents are key witnesses to the tradition of the *Placita* on the subjects of spermatology, embryology, heredity and related issues. For Censorinus, who dated his little treatise to 238 CE, it may be considered virtually certain that his chief source for the passages with material similar to A was Varro. The evidence was set out in considerable detail by Diels at *DG* 186–198, who argued that the likely source was his book *Tubero de origine humana* cited at §9.1. The other work that Censorinus refers to is *Atticus de numeris* at §2.2. These works both derive from the so-called *Logistorici*, treatises of a philosophical character which honour a recently departed person and treat a subject with which that person was connected (Rocca-Serra 1980, xi n. 24). In a brief examination of Censorinus' sources Rocca-Serra (1980) viii–ix agrees with Diels that chs. 4–8 ultimately represent extracts from the *Vetusta placita*, and that much is owed to Varro. Whether or not one accepts Diels' hypothesis, there can be no doubt the material in these chapters goes back to a late Hellenistic doxographical tradition which has been transmitted through to A. See further the Introduction to Book 5, section 5 above. We note too a quaestio related to the subject of this chapter in the *Δικτυαχά* of Dionysius of Aegae preserved by Photius. It is dialectically formulated in terms of a diaphonia between two θέσεις, does the semen derive from the whole body or from the testicles only. On this work see Von Staden (1999) 177–187; Runia (1999a) 242–243; and the Introduction to Book 5, section 5 above.

The important parallel text in ps.Galen *Def.Med.* §439 is the first in a long series of sections on spermatology, embryology and gynaecology (§§439–461) which depart from this work's usual method of presenting brief definitions. The first 14 sections (§§439–452) contain much material relevant to Book 5 of the *Placita*. On this work see Kollesch (1973), who dates it (pp. 60–66) to the last decades of the first cent. CE, i.e. very close in time to A; Runia (1999a) 230, 242–243; and the Introduction to Book 5 above. This passage is excerpted in a set of notes in Codex Marcianus 521 f. 100^r, first published by Diels at *DG* 233. It is not an independent witness but is wholly derived from the ps.Galenic text §§439–452, including the list of what appear to be headings but are in fact drawn from the beginnings of the various sub-sections of this text. Diels later realised (1893, 102 n. 2 = Burkert ed. 1969, 240 n. 2) that it was derived from ps.Galen. This textual fragment is valuable because it proves the authenticity of this section of ps.Galen's compendium.

Mention should also be made of the valuable treatise on spermatology of the so-called Anonymus Bruxellensis (previously attributed by its early editors to Vindicianus, but this is no longer accepted; see Debru 1999, 453–454). It gives as its subject in the opening sentence both the nature of semen (*quid sit*) and

where it comes from (*unde*), i.e. deals with two question types. It outlines the positions of various philosophers and physicians and gives much more detail on their arguments than we find in A. There is, however, as Van der Eijk rightly notes (2000–2001, 2.80), little correspondence with the contents of A's presentation.

(2) *Sources*. Aristotle devotes a long section of *GA* to the examination of semen, introduced at 1.16 721a28 as one of the ὁμοιομερῆ (uniform parts). At 1.18 724a14 he commences his investigation into what semen is (i.e. the same quaestio as in our chapter) with a dialectical passage in which he takes issue with the pan-genesis theory found at A §6. But no name-labels are mentioned. The content of his treatment had only a limited influence on the later doxographical tradition. Epicurus does not mention the subject of the nature of semen in his *Letters*, but it is briefly listed in the doxography contained in a scholion inserted at *Ep.Pyth.* 66; on this text see above on ch. 5.2 Commentary D(a). The subject is included in the summary of the Stoic φυσικός λόγος at D.L. 7.133, being part of the study of causes (τὸ αἰτιολογικόν) in which common ground is sought with 'the doctors'. An all too brief summary follows at D.L. 7.158–159. Galen's work *Περὶ σπέρματος* takes as its starting-point the *χρεία* and *δύναμις* of semen and betrays no interest in a doxographical tradition such as that of A.

The pre-Aristotelian sources for the doxographical tradition on the nature of semen will have been rich, since the question was much discussed from about 500 BCE onwards. Most of these original documents are lost, but in addition to Plato's discussion in the *Timaeus* (see below on §4), there is preserved a treatise *Περὶ γονῆς* in the Hippocratic corpus (no. 21 in the listing of Jouanna and Magdelaine in *DPhA* 3.776). The title is usually translated 'On generation', but as the opening words of the work indicate, *γονή* is also the word for semen.

On the early tradition of spermatology in Greek medicine see Lesky (1951), (1952); Lonie (1981); Longrigg (1985); (1993) *passim*; Althoff (1999) 85–89 (on Aristotle). Lesky's monograph (presented to the Mainz academy in 1950, but not published until the following year) is the classic work on the entire subject of reproduction and heredity in the ancient world and has not been superseded. Her work is systematically organised in terms of physiological theories, so discussion of sources must be sought via the *index locorum*. Useful overviews of individual philosophers and doctors in Longrigg (1993).

C Chapter Heading

This is the only chapter in Book 5 with a heading that indicates that its subject is the οὐσία (substance, nature, essence) of something. It is the last in a long line of chapters inquiring after the substance of the major components of the physical world (2.11, 13, 20, 25, 3.9 in P^B, 4.3). The usage in the present chapter clearly goes

back to Aristotle and is also found in the Anon. Bruxellensis (see texts below section E(a) Chapter heading, (b) General texts). It differs from the approach used by Galen noted above in section B. For the distinction and connection between *Περὶ τοῦ δεῖναι* and *Περὶ οὐσίας τοῦ δεῖναι* see above, ch. 1.3, Commentary C ad init., and for similar problems at chs. 1.21–22, 1.25–26 and 1.27–28 see the Commentary on those chapters, all at Commentary C.

D Analysis

a Context

After the first two psychological chapters 5.1 and 5.2, which might better have been placed in Book 4 (see on chs. 5.1 and 5.2. Commentary D(a)), this chapter is the first to focus on physiology proper, i.e. those phenomena in which the role of the body is predominant. It commences the long section chs. 5.3–23, which amounts to a doxographical treatment of subjects belonging to spermatology, embryology and what we would now call genetics. See our remarks in the Introduction to Book 5, section 5. A starts with the subject of semen, since it is the starting-point of animal and human life.

b Number–Order of Lemmata

We cannot go beyond the evidence of the tradition of P and the six doxai it records. As we shall see in the following sub-section, these cover the main positions on the subject. Nevertheless the wealth of material in the wider doxographical tradition not used by P suggests that the coverage in A may have been fuller. The name-labels recorded in the three documents in the proximate tradition which are missing here are: Parmenides, Hippo, Anaxagoras (Censorinus); Diocles, Praxagoras, Hippocrates (*Def.Med.*); and Alexander and Diogenes of Apollonia (Anon. Bruxellensis). So it is highly likely that A's chapter originally contained more name-labels and also quite possibly more doxai.

c Rationale–Structure of Chapter

The opening doxa unusually eschews indirect speech and gives what looks like a verbatim quote; cf. the similar practice at A 2.5.1. But it is not likely to be an actual quotation from an Aristotelian work. Although the language and the contents are basically Aristotelian, nothing resembling this sentence is found in GA, where Aristotle deals with the subject of semen at great length, or elsewhere in the extant works (it is not impossible that it derives from a lost exoteric work, but not very likely). But we should note that the practice of commencing a chapter with its subject as first word followed by *ἐστὶ* occurs frequently elsewhere in order to introduce a preliminary definition (chs. 1.9–12, 14–15, 23, 2.30, 3.1, cf. 1.25.1, 4.8.1–2, 5.29). Of these passages only 1.23 follows the same

practice as here, i.e. first giving the name-label of the purported source of the definition followed by the definition itself, in that case Pythagoras Plato (in two cases we find an explicit indication that it is a definition, A 4.8.1 οἱ Στωϊκοὶ ὀρίζονται οὕτως τὴν αἴσθησιν· αἴσθησις ἐστὶν ...; 5.29.1 Ἐρασίστρατος ὀρίζεται τὸν πυρετὸν οὕτως· πυρετός ἐστι ...). The rest are all without name-label. G and Q give a text that is more in line with P's usual practice (φησί/'glaubte' + infinitive). It is far from impossible that this was P's original text, but we retain the text of P^B as the *lectio difficilior*. The doxa is intended as an introductory definition and as such stands apart from the rest of the chapter. Its metaphysical content differs from the remaining five doxai which all report various physical substances. It is best regarded as a nominal definition which sets the scene as it were for the descriptions that follow in the remainder of the chapter. See the discussion of such definitions and their role in the *Placita* above ch. 1.9 Commentary D(d) under General points. Unusually the definition is not anonymous, as in 1.9–15, but is attributed to Aristotle. It should also be noted that, through its metaphysical content, it forms an implicit diaeresis with the remainder of the doxai in the chapter.

The remaining doxai all indicate the physical nature of semen and/or its source in a highly compact fashion. The first, §2, presents the view that semen is 'foam from the most useful (kind of) blood', which is equated with 'residue from food'. This doxa represents what Lesky has called the 'hematogenic' theory of the nature of semen (1951, 120 ff.). The doxa combines two views, that of Diogenes of Apollonia (attributed to him by the Anon. Brux. 1, 3, but to Hippo by Censorinus), and of Aristotle. For the latter he uses the exact Aristotelian formula περίττωμα τῆς τροφῆς but without the additional qualifications χρησίμου and ἐσχάτης (GA 1.18 725a11, 1.19 726a26; see texts below section E(b) General texts). The whole is then puzzlingly attributed to Pythagoras (elsewhere a quite different view linked to that of Alcmaeon is attributed to anonymous Pythagoreans by Alexander Polyhistor as recorded at D.L. 8.28). Pythagoras is perhaps invoked as a distinguished *auctor* of an established view (as often elsewhere in A). The two parts of the doxa, foam and residue, are most likely drawn from Aristotle (where they are separate) and conflated. The indication for this is the qualification that in Aristotle applies to the residue, i.e. that it is 'useful', is transferred to the other view of semen as foam (in Aristotle blood is the ἐσχάτη τροφή (GA 1.19 726b2), but it is not connected with foam as explanation of semen's whiteness). The question may be asked whether this combination is the result of A having conflated the two parts or whether it is due to P's epitomization. The former is perhaps more likely.

In the next two lemmata A presents what Lesky has called the 'encephalomyelogenic' theory of semen (1951, 9 ff., cf. Lonie 1981, 101–102). It is divided

into two separate views: Alcmaeon, the originator of the theory (Lesky *ibid.*), regards semen as a 'part of the brain', Plato as 'an effluence from the marrow in the backbone' (clearly derived from the *Timaeus*). A thus not unintelligently divides what ps.Galen nevertheless keeps together. Censorinus, on the other hand, appears to contradict this view by lumping Alcmaeon together with the atomist view—which A presents last (§6)—in opposing the view that semen comes from the bone marrow. The contradiction can be rescued, as suggested by Lesky (1952), by interpreting Alcmaeon's opposition as regarding only the view that it is from the marrow and not the brain. But this is perhaps being too kind to Censorinus. It is worth noting that Galen describes this theory, taken over by Plato, as the *παλαιὰ δόξα*, and also attributes it to Hippocrates (text below under section E(b)§4). The great doctor, however, is almost entirely absent in the *Placita* (only at A 4.5.2, 5.18.4).

The final two lemmata are perhaps best taken together as representing the pan-genesis view. The second of these, §6, attributes the view to Democritus, who according to Lesky (1951, 72) must be seen as the originator of the doctrine, though it may have been inspired by Anaxagoras (as implicitly suggested by the doxography in Censorinus). Ps.Galen also attributes this view to Democritus (accompanied by Hippocrates, in opposition to Galen above; in fact both theories are found in the Hippocratic corpus). We are left with §5, which attributes a reduced version of this view—semen as a fragment of soul and body—to Epicurus. This must be a mistake, for elsewhere Epicurus is recorded as faithfully following the atomist view and this is taken over by his disciple Lucretius. His view is clearly summarised in the scholion to *Ep.Hdt.* 66 which we discussed in ch. 5.2 Commentary D(a). (See the texts cited below under section E(a)§5.) As will emerge in two following chapters (A 5.4.1, 5.11.3) the doxa in fact represents the Stoic position, but does so clumsily: semen is a part of soul (cf. A 4.4.4, 4.21.4) but as such is also corporeal (see the text from AD cited below under section E(a)§5). It also takes *σπέρματα* or *σπερματικοὶ λόγοι* from all the body's parts (implicit in A 5.11.3). The lemma may in fact be a doublet of the lemma in the next chapter, from which it is separated only by the final Democritean doxa and which repeats the atomist connection by coupling Zeno with Leucippus. But its reappearance at 5.11.3 militates against this possibility. It is more likely that A, or even more likely P, has garbled an original Stoic doxa and given it a wrong name-label (compare what has happened with P in A 1.20.1).

Despite the mishap towards the end, however, this chapter is one of A's better efforts. After the initial definition he manages to set out the main views on the subject in a compact fashion, using a clear diaeresis, which in fact anticipates the tripartition of ancient theories delineated by Lesky in her monograph. This is in contrast to the other three doxographies in the proximate tradition, which

all relate only two of the main positions (the Parmenidean doxa in Censorinus is not relevant; see below on chs. 5.7 and 5.11). The sequence of the doxai also follows a logical order, beginning at the micro-level with an explanation in terms of the blood, moving from there to the larger bodily parts brain and spine, and ending with the view that semen is taken from all the parts of the body. The name-labels are not all accurate, as we have seen, but four of the main theorists are identified. Following the usual doxographical method the order is systematic rather than chronological.

Comparison with the other doxographies in the proximate tradition reveals that the three texts in the proximate tradition all adopt the same approach as A, setting out distinct positions in a diaeresis. A's list with its five doxai (excluding the opening definition) is in fact the most extensive, though lacking some of the colourful detail of Censorinus. This convergence of method shows that A's basic method, of which the diaeresis is a key technique, goes back to anterior traditions. A difference, however, is that his name-labels are all drawn from the philosophical tradition (including Alcmaeon as a *φυσικός*) with Epicurus as the youngest representative. The Hellenistic physicians, who will be very prominent in Book 5, are not included. This is in contrast to Diocles, Praxagoras, Hippocrates and Asclepiades in ps.Galen, Diocles and Alexander the pupil of Asclepiades in the Anon. Bruxellensis.

d Further Comments

Individual Points

§3 Alcmaeon is prominent in the remains of Book 5, with five doxai (also at 5.14.1, 5.17.3, 5.24.1, 5.30.1). This is in addition to his contribution to psychology in Book 4 (see 4.16.2, 4.17.1, 4.18.1). The fact that he is so often placed at or close to the beginning of the chapter might imply that he is an early contributor to the discussions (cf. the role of the Milesians in Book 2). But this is not made explicit. The *πρῶτος εὐρετής* motif is in fact absent in what we have of Book 5, occurring for the last time at A 4.2.1. The claim that Alcmaeon was a pioneer in human psychology and physiology is a modern invention, encouraged by Diels' early placement of his fragments in VS ahead of Parmenides. The role of pioneer in these areas of enquiry should be credited to the Eleatic; see further Mansfeld (2015e).

§6 For the final phrase *οἷον ὁσῶν σαρκῶν ἰνῶν* the textual corruption in P^{BQ} is exposed by P^G, as already seen by Diels; cf. DG 15. Other difficulties are whether to read *σαρκῶν* or *σαρκικῶν* and whether the final two nouns are connected by *καί*. See the detailed discussion at Jas (2018a) 331–322. They do not of course affect the sense. The three examples given in fact go back to Aristotle who in the context of questions about the inheritance by children of traits from

their parents (cf. ch. 5.11) at GA 1.18 722a17 asks whether the semen is drawn only from the *ὁμοιομερή*, such as flesh and bone and nerve, or from the *ἀνομοιομερή* such as face and hand (text below section E(b)§6). The same distinction with the same triad is found in a statement attributed to Hippocrates on male semen at the Anon. Bruxellensis 25.

Commentary

A *Witnesses*

The usual witnesses for this book, P^B, P^Q and P^G, are complemented by a small snippet of the papyrus, which contains remnants of the last four lines of ch. 5.3 and the first seven lines of ch. 5.4. G retains all three lemmata. On the heading in S^L see below, section C. On the apparent presence of §1 in T see below, section D(e).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* There are no exact parallels for this chapter in the proximate tradition. It is, of course, closely related to the more general topic of the substance of semen already discussed in ch. 5.3, where we saw that the nominal definition was cast in Aristotelian terms and emphasised the potential nature of the seed, but the remaining five focused on its material component. This implied diaeresis is further developed in the present chapter. The origin of the problem posed in the chapter can clearly be seen in Aristotle's discussion of the nature and working of semen in *GA* 1.18–22, where he concludes that its δύναμις is derived from the male and its ὕλη from the female. The distinction between the two kinds of semen is not present in this chapter, but will be introduced in the chapter that follows, ch. 5.5. The question is reformulated in the materialistic philosophy of the Stoa, since semen is corporeal but also has psychic powers (τὸ σπερματικόν being a part of the soul). There are some good parallel texts for the Zenonian doctrine in AD and in ps.Galen *Definitiones medicae*, as well as in the Stoic doxography in Diogenes Laertius (texts below at section E(a)§1 & (b)§1). Most likely these texts ultimately reflect a similar doxographical tradition to that used by A. On the parallel text in T see below, section D(e).

It is worth noting that the explicit distinction and antithesis between the incorporeal and the corporeal belongs to the conceptual apparatus of the *Placita*: see M–R 2.1.14, 57–58, 147 and also in the next sub-section on the chapter heading. It derives from the philosophy of Plato, Aristotle and the early Academy, via the Stoa to the later phase when it is influenced by the rise of Middle Platonism.

(2) *Sources*. There is no extant evidence for the approach taken to this question in pre-Aristotelian texts. Of discussions in the atomists our text is the only surviving trace. Similarly we have no further evidence relating to Strato or other Peripatetic treatment.

C Chapter Heading

There is no variation in the formulation of the chapter heading in the main witnesses. In the list contained in the Laurentianus ms. of S, however, we find the heading in P prefaced with the phrase Περὶ τοῦ, i.e. Περὶ τοῦ εἰ σῶμα τὸ σπέρμα. Since this phrase in combination with an interrogative heading is found elsewhere only at 2.8 (Περὶ τοῦ τίς ἢ αἰτία τὸν κόσμον ἐγκλιθῆναι) and there is no parallel with a heading involving a topic introduced with εἰ, it is probable that the addition does not go back to A.

For the complicated situation regarding the index of chapter headings from S's *Eclogae* see the General Introduction section 4.3.2, and below on ch. 5.19 Commentary C. In the pinax for the entire *Anthology* partly preserved in S^L at Γ 10 under the heading Περὶ τῆς γενέσεως τῶν ζῴων (i.e. ch. 5.19) we find a list of no less than 18 further headings introduced by the words ἐν ᾧ καὶ ταῦτα. See the text printed in Wachsmuth (1882) 17 (originally published in 1871). The list was analysed by Elter (1880) 73–74, who demonstrated that at least four of these headings were demonstrably interpolated from P, namely the headings of 5.4, 5.5, 5.17 and the second mention of 5.19. This interpretation was taken over by Wachsmuth in his edition; see the note at (1884) 1.294. The remaining headings most likely refer to sub-headings taken from A and used by S in a manner similar to his practice in *Ecl.* 1.26 on the moon. This hypothesis is at least partly confirmed by Photius' list of chapters, in which he summarizes the contents of *Ecl.* 1.42 as Περὶ τῆς γενέσεως τῶν ζῴων καὶ τὰ ἐξῆς. For the most part we follow Elter's analysis in our edition, although it contains speculative elements and cannot be considered wholly certain. In the case of the present chapter, given the unparalleled form of the heading in the pinax of S^L as noted above, interpolation from P seems probable. It should be noted that, if Elter and Wachsmuth are correct, S will not have included the text of this chapter—together with the previous two and the next one—in his anthology. He must have thus regarded the subject of spermatology (narrowly conceived) as not relevant to his aims in the *Anthology*.

Chapter headings beginning with εἰ are uncommon in the first three books (only at chs. 1.5, 2.3–4), but occur with increasing frequency the last two books (chs. 4.3, 4.9, 4.15, 4.20, 5.4–5, 5.15, in the latter part of the heading in 5.19, 5.20, 5.26, 5.29; on this kind of heading see ch. 1.1, Commentary C). They include the three chapters in which the topic under discussion focuses on whether something is a body or not: 4.3 εἰ σῶμα; 4.20 εἰ ἀσώματος; 5.4 εἰ σῶμα. The distinction between corporeal and incorporeal is made further explicit in the body of each chapter. It should be noted that the εἰ x formula encourages a yes or no answer, so is highly suitable for dialectical discussion.

Most lines of the chapter are partially preserved in the papyrus except the heading. Most puzzlingly, instead of the chapter heading, it is headed by what seems to be a chapter number 42. For a possible explanation see M–R 1.127–128, where it is suggested that it could be the result of a numbering in which Books 3–5 were taken together (but it should then be 45, not 44 as we stated there). This may imply an earlier version of the Aëtian *Placita* in two books, but there is not a scrap of further evidence to support this hypothesis. Another possibility is that through inadvertence a sheet or column number has found its way into the text and has supplanted the chapter heading.

D Analysis

a Context

The chapter continues the treatment of the subject of semen. Formally there might seem an analogy between the two chapters 4.2–3, entitled Περὶ ψυχῆς and Εἰ σῶμα ἢ ψυχὴ καὶ τίς ἢ οὐσία αὐτῆς respectively. But the approach differs substantially, since there in the first chapter all the incorporeal views on the soul are listed and in the second all the corporeal views, whereas here the two views are contrasted within the single chapter. A closer parallel is 4.20 Εἰ ἀσώματος ἢ φωνῇ (on whether sound is incorporeal), to be further discussed below.

b Number–Order of Lemmata

The tradition of P only yields 3 doxai. As we shall see, the neatness of the diaeresis suggests that these were the main views which A listed, but this can be no more than a supposition.

c Rationale–Structure of Chapter

Although the chapter heading highlights the question whether semen is a body, the doxai in the chapter itself examine its metaphysical aspects and so link up not only with chs. 4.2–3 and 4.20 mentioned above (as well as the definition at the beginning of ch. 5.3), but also to a limited degree with Book 1 and esp. 1.9–12 (note the diaeresis between incorporeal and corporeal causes at 1.11.3–4).

The first view is primarily Stoic: semen as a fragment of soul (τὸ σπερματικόν is one of the soul's seven irrational parts, cf. ch. 4.4.4) is itself wholly corporeal (since according to the Stoa soul is corporeal). In opposition to this view is the Aristotelian position that it is incorporeal as far as its δύναμις (functionality or capacity to act) is concerned, but corporeal with regard to its material composition. On the triple-barrel name-label in §2 see section D(d) below. The third doxa responds directly to the second in arguing that its δύναμις too is a body, i.e. corporeal, since that functionality is identical to the πνεῦμα of which it consists.

The chapter thus exhibits a fairly straightforward diaeresis. It cannot be the same as the simple diaphonia between incorporeal and corporeal in 4.2–3 and 4.20, since it is inconceivable that semen can be wholly incorporeal. The basic diaeresis is between the view that there is no distinction between its functionality and its material basis (doxa 1) and that the view that there is such a distinction (doxai 2–3). But for the second half of the opposition there is the further distinction between the view that its functionality is incorporeal (doxa 2) or corporeal (doxa 3).

Because of the neatness and completeness of the diaeresis, it is eminently likely that we have the chapter in its original form. But it always remains possible that P omitted doxai with further systematic distinctions or cut short some of the detail of the explanations.

d Further Comments *Individual Points*

§1 In our commentary on ch. 5.3 we argued that the similar doxa at 5.3.5 is wrongly attributed to Epicurus and that A (or P) may have garbled an originally Stoic name-label. But since there are similarities between the pan-genesis view held by Democritus (5.3.6) and the view of the Stoa (cf. the view of Sphaerus at D.L. 7.158 cited at ch. 5.3 section E(b) General texts), it is not entirely unreasonable to associate Leucippus with this view. His name reappears at A 5.7.6, where it is noted that he pronounced on an issue related to procreation.

§2 The doxa is basically Aristotelian in tenor. It may well ultimately (but not directly) be based on his statement about the σῶμα of seed at GA 2.3 737a7–12, where he also speaks about the νοῦς (but uses his own terminology of ἀρχή, χωριστόν and ἀχώριστον). The triple-barrel name-label group Pythagoras–Plato–Aristotle occurs elsewhere three times in A, at 2.10.1, 2.23.8, and—interestingly—4.20.1 (on the incorporeality of sound). Plato in fact does not dwell on the metaphysical aspects of semen in his discussions in the *Timaeus*, but the association is warranted because as Aristotle's teacher he introduced him to the distinction between the incorporeal and the corporeal. In true first cent. CE fashion Pythagoras is promoted as the great progenitor of non-physicalism;

cf. A 1.3.7 (going back ultimately to Aristotle and the Old Academy; see ch. 1.3 Commentary D(d)§7). Also see A 1.9.2 with Commentary D(d)(2), and A 1.16.1.

§3 *Pneuma* does not play an extensive role in Strato's fragments (though he did write a work *Περὶ τοῦ πνεύματος*, D.L. 5.59). But at A 5.8.2 the ἐμπνευμάτωσις of the womb is one of the causes of the birth of monstrosities and at 5.24.4 he (with the Stoics) is credited with the view that sleep is caused by the relaxation of the αἰσθητικὸν πνεῦμα. Aristotle mentions that semen contains *pneuma* at GA 2.3 736b37 just before the passage cited above on §2. Wehrli in his commentary on Strato's fragments (1969, 70) suspects that the combination with Democritus is erroneous and that the doxa has suffered from abridgement.

Diels' text for the final lemma as recorded in G reads Στράτων καὶ Δημόκριτος κατὰ δύνανμιν εἶναι σωματικήν (DG 641). This seems to make little sense if the adjective is taken to qualify the noun, and if not, then the noun understood with σωματικήν is unclear. In an unpublished communication to the authors Jas argues that the correct reading is καὶ τὴν (instead of κατὰ) δύνανμιν εἶναι σωματικήν, which restores the credibility of the text at the expense of somewhat simplifying the doxa. Jas also points out that the ms. Baroccianus 131 not utilised by Diels also adds the name-label of Epicurus to that of Democritus. It is not translated by Nicolaus and she believes that it should not be included in G's text. It is not confirmed by the papyrus of P, and can safely be ignored for the text of A.

e Other Evidence

As was noted in the Introduction to Book 5, section 1 above, T does not make any use of A's Book 5 in his work. This may seem to be contradicted by the fact that at CAG 5.25 he reports the same doctrine attributed to Zeno that we find in §1 of this chapter (text below in section E(a)§1). The explanation is that, as we noted earlier in section B, there is a common tradition between A and AD on this point and that T has cited the latter (which gives more detail than A) via its citation in Eusebius *PE*. On a further parallel between Book 5 and T, this time via Clement, see A 5.26.1–3 and our Commentary at D(e).

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

P appears to transmit three doxai, of which G regrettably preserves only the first two (but see below, Commentary D(a–c) on a possible fourth doxa). Psellus uses some material from this chapter in his chapter Πῶς αἱ συλλήψεις γίνονται, the heading of which is taken from A 5.6. On the heading in S^L see below, section C.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* Important comparative material is furnished by the proximate tradition as represented by Censorinus and Nemesius. Both authors

give a clear diaphonia, but the question they pose is not wholly the same as that which A addresses in our chapter (although he touches on it in the final doxa). A asks whether females release semen just as males do (even if in a different way). Censorinus and Nemesius ask whether only males have seed and contribute to the birth of offspring or whether females contribute too, i.e. with the semen that they possess. It can easily be seen that the former question is more limited than the latter, but that the second and broader approach relates better to the origin of the problem, namely how to explain that, if the male semen appears to be the instigator of conception, it nevertheless often happens that children resemble their mothers, and so the female must also contribute to the process not only from a material but also from a formal or (to use modern parlance) genetic point of view. The treatment of the topic at ps.Galen *Def.Med.* 440 is also of interest. It asks the same question as A, i.e. whether females have seed, but uses different terminology (εἰ σπερμαίνει). It gives two of the same reasons for a positive answer as in A (female desire, same organs), but adds others, including the resemblance of children to mothers (cf. ch. 5.11). Hippocrates is then cited in favour of this view. The resemblance question returns in 5.11 and is clearly the dominant topic in relation to which the issue of female semen is raised. See for example the texts of Lucretius and Lactantius cited below (on the latter text with its conjoined name-labels Varro and Aristotle see below, section D(e)).

(2) *Sources.* The various questions are well formulated by Aristotle in *GA* 1.17 721a35 and 1.19 726a31–b1, and also discussed at some length (texts below section E(b) General texts). From there the topic was picked up by the Hellenistic schools. But, as the name-labels indicate, reflection on them goes back to the Presocratic period. It was also discussed in the Hippocratic school, as witnessed by the treatise *Περὶ γυνῆς* which is dated to the end of the fifth cent. BCE or a little later (Jouanna 1999, 392). For further discussions on this subject see Gerlach (1937–1938); Lesky (1951) 24ff. and passim; Van der Horst (1990a), (2012), who in both articles gives a useful overview of Greek and Latin texts and copious references to secondary literature (for Jewish knowledge based on Greek medicine see also 2018, 111–112). See also the references given at ch. 5.3 Commentary B.

C Chapter Heading

This is another of the limited number of chapter headings commencing with εἰ, on which see our comments at ch. 5.4 Commentary C. The chapter heading in the index of S^L is probably interpolated from the list in P. On both these topics see our remarks on ch. 5.4, Commentary C. Elter's reason for concluding that it is interpolated is based on the absence of the name 'Ιππων in Photius' name-

lists. As noted above in ch. 5.4 Commentary C, S appears not to have included the subject of spermatology in his collection of excerpts.

The καὶ preceding αἱ θήλεια in the heading is clearly necessary, since the topic of the chapter is whether females *also* have semen that contributes to the conception and genetic make-up of the offspring. The apparent heading in Codex Marcianus 521 f. 100^r (Diels *DG* 233) is in fact excerpted from ps.Galen *Def.Med.* §440 with the words ἐζήτῃται εἰ abbreviated to εἴ. The chapter heading itself has excellent antecedents in Aristotle *GA*, esp. at 1.19 726a30 where we find the same phrase προίεται σπέρμα (singular because the subject is τὸ θῆλυ).

D *Analysis*

a Context

The chapter is the third and last dedicated to questions related to semen. In the previous two the question of which sex produces semen has not yet been broached. The subject returns in ch. 5.11 when the question of the similarity of children to their parents and grandparents is discussed.

b Number–Order of Lemmata

The witnesses record three lemmata. But see the next sub-section on whether P may have originally contained at least four doxai. The fact that the parallel text in Censorinus has five name-labels that do not occur in P's version of the chapter suggests that he will have epitomised away some of the material originally present in A.

c Rationale–Structure of Chapter

The three doxai form a quite straightforward diaeresis. The first, affirming the females also release semen, is opposed to the second, where it is denied that they do this: they emit moisture that resembles perspiration, but it is not to be regarded as productive semen (it was the view of Aristotle, followed by the Stoics, that only concocted semen is fertile). The third view, predictably, represents a compromise position: the female does release semen, but it does not contribute to the process of birth because it falls outside the womb (i.e. it is not linked to the act of sexual intercourse).

The final sentence of the lemma attributed to Hippo is problematic. First it is said that females do emit semen but that it does not contribute to the process of birth since it falls outside the womb. But in the final sentence we read that bones come from the male, flesh from the female, the second part of which contradicts the earlier part of the doxa. It should also be noted that in ch. 5.7 on how males and females are conceived there are two doxai attributed to 'Hipponax' which also appear to refer to the same philosopher (on the name-label

see ch. 5.7 Commentary D(d)§3). In A 5.7.3 it is unclear whether the two kinds of semen (thick/strong, fluid/weaker) refer to male semen only or also female. In 5.7.8 males result if the semen prevails, females if the nourishment prevails. Lesky (1951, 28) interprets this statement as being consistent with the view that the female does not contribute to the birth, but disregards the final sentence of 5.5.3.

The decision of Kranz to bracket the final sentence is in our view commendable. However, a different mode of treatment should be considered. It is possible that the final sentence is a remnant of a fourth doxa, which follows on from the first lemma. If the position in the first doxa is accepted, i.e. that both male and female emit semen and (by implication) that both contribute to conception, then the question can be asked, what does the male contribute and what the female. This is a different question from that which will be asked in ch. 5.7. The answer is not that the male contributes the form, the female the matter or the food, but rather that each contribute different bodily elements (cf. 5.7.7 and the solution of Galen, *De semine* 2.4, noted by Nemesius ch. 25 cited below). We have not found any direct parallels for this position in the sources (it is expanded by Psellus §110, presumably on the basis of what he found in P). We consider this possibility very likely and have adjusted the text accordingly. It would mean that there is a lacuna in the text. Because of the contradiction noted above, it is unlikely that the final view should be attributed to Hippo and thus there must be a missing name-label. For this reason we postulate a fourth doxa for the chapter. If this is accepted, then the words καὶ εἶναι will also be suspect, since they link the final part of the doxa to what precedes. It is the kind of doxa that could easily have been attributed to Parmenides or Empedocles. Both name-labels are present in Censorinus 5.4 but are conspicuously absent in A.

d Further Comments

Individual Points

§1 As noted in the Introduction to Book 5, multiple name-labels are prominent in this Book. It should be noted that there is considerable variation throughout A (and P) in whether groups of name-labels are juxtaposed or connected with καί, with the former predominating. Here the three names are linked in P^G and this reading is supported by the papyrus. We have retained the reading in our text, despite the absence of the connectives in P^B. It suggests that instances of καί may have been stripped out in the course of transmission and adaptation. But it must be noted that the order of the name-labels Democritus and Epicurus differs between the four witnesses. G is the only one which retains the chronological order. In all other 13 instances of the two names in the *Placita*

the chronological order is adhered to, so there is a case for following G. Nevertheless the evidence of three witnesses, including one that is very early, weighs heavily and we have retained this reading. It should also be noted that in the *Placita* chronological order is often not adhered to in multiple name-labels; see for example A 2.23.8 Plato–Pythagoras–Aristotle.

‘Concealed testicles’ refers to the female ovaries. The role of the female ovum in mammalian conception was wholly unknown to the ancients and was discovered by K.A. von Baer as late as 1827.

§2 A uses the technical term πεπτικός, which in fact Aristotle only uses in the summary of his view on male and female semen at *GA* 4.1 766a32. This relatively rare term has caused confusion in the mss. of P^B. For some interesting notes on the (primitive theory) that the female is merely as it were a nurse who temporarily houses the child see Groeneboom (1952) 191 on Aeschylus *Eum.* 657–666.

§3 Diels’ conjecture ἐνίας instead of the ὀλίγους of the mss. of P^B is justified, not only because it is supported by P^Q, but also because ὀλίγοι referring to persons does not appear to belong to A’s vocabulary, whereas there are parallels for ἐνίας close by, at 5.9.1, 5.13.2.

e Other Evidence

In addition to the slightly different formulation of the topic at issue (noted above in section B), there is also only a limited correspondence between the labels in A and in the proximate tradition. Epicurus represents the positive view in both A and Censorinus, but Democritus is (erroneously, cf. 5.7.7) associated with the opposite point of view in Nemesius (unlike in A). Aristotle (in Nemesius) and the Stoics (in Censorinus) represent the negative view, as they do in A, but Hippo is associated with this view as well (Censorinus), instead of the more subtle position recorded by A. For Pythagoras and Alcmaeon, see the note on §1 above in section D(d). It is likely that a doxa of Empedocles (who is recorded on the subject by Aristotle, *GA* 4.1 764a2) was epitomized away by P (he occurs 17 times in Book 5, far ahead of the next most popular, the Stoics who occur 13 times). All in all, the proximate tradition and A are less close to each other than one might have expected. As we see so often, the doxographical traditions are fluid and subject to modification at different stages of transmission.

Of special interest is the report in Lactantius *Op.D.* 12.6, where a doxa on conception is introduced by the name labels *Varro et Aristoteles* followed by a report in which it is first stated that females do have semen and that this is the reason that progeny can look like their mothers. This of course differs from the view attributed to the Stagirite in A’s chapter (cf. 5.11.3 where it is attributed

to the Stoics). In a learned note Perrin (1974) 358–362 argues persuasively that it is unlikely that Lactantius will have had direct access to Aristotle and that Varro will have been his source, most likely via his treatise *Tubero de origine humana* (also cited by Censorinus 9.1; see our remarks at ch. 5.3 Commentary B). The differing view on Aristotle can be explained if the report is based on a (most likely ps.Aristotelian) text such as GA 4.1 766b11–26 which can be read as speaking of female semen as a material residue. Another possibility is the influence of a text such as HA 10.2 634b29–39 which also assumes female semen.

Commentary

A *Witnesses*

The chapter with its heading and single lemma is preserved in P^B, G and Q. Ps takes over the chapter heading and partly utilizes the contents. S^L records an abridged ‘umbrella’ type chapter heading with Περί, but without any doxai. In Wachsmuth’s judgment the heading was introduced by S as a sub-heading in the chapter Περί τῆς τῶν ζώων γενέσεως, presumably because it falls under καὶ τὰ ἐξῆς included in the heading in Photius’ index. It remains possible that the heading was interpolated from P, as was probably the case for the heading of chs. 5.4 and 5.5; see further on 5.4 Commentary C. But see further under section C.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The only quasi-doxographical text that has a separate section on the subject of conception is ps.Galen *Def.Med.* 451 (text cited below, section E(a) General texts), which like A, focuses on the cause but gives a wholly different explanation. There is also a section on the subject in Lactantius’ work on God’s work in creation which is dependent on earlier sources (as noted in Commentary D(e) on ch. 5.5, the combination of the name-labels Varro and Aristotle almost certainly indicates the former as the source).

(2) *Sources.* In general it can be said that the topic of conception and the impediments thereto do not appear to have aroused much specific discussion or controversy in ancient medical literature. We record below in section E(b) passages in the *Corpus Hippocraticum*, Aristotle and some later authors, but none make reference to earlier thinkers with specific views which A could have used for his purpose.

C *Chapter Heading*

As noted above on ch. 5.2, chapter headings beginning with πῶς are common in Book 5, but rare elsewhere in the *Placita*. The question type involved is that of cause (διὰ τῆς). For headings beginning with, or containing, words that signalize *questions* see above, ch. 1.1 Commentary C. The present chapter is the first of a whole sequence of chapters using this formula, which testifies to Book 5’s focus on causation; see 5.7–8, 10, 12–13, 16. The aspect of cause is made explicit in the text on the subject ps.Galen *Def.Med.*

On the presence of the heading in the pinax in S^L see above, chs. 5.4 and ch. 5.5 Commentary C. The divergence of the text of the heading in S, Περί συλλήψεως, supports the view that this heading is *not* interpolated from P, unlike

the next two in the list, but is derived from A. We prefer, however, to retain the wording of the heading as it is found in the tradition of P.

D *Analysis*

a Context

The topic of conception follows on quite naturally from the two chapters on semen.

b Number–Order of Lemmata

Monolemmatic chapters are extremely infrequent in A, as is hardly surprising, since a single lemma rules out a diaeresis or a diaphonia, which is the most common structuring and didactic technique in the *Placita*. Most of the chapters that only have a single lemma are either exceptional (e.g. 1.4, 3.6, 18—all without name-labels; 4.11, 21—single very long doxai) or very likely incomplete (because S is silent, e.g. 3.14, 5.22–23, 28). In this chapter it is very likely that further lemmata have been lost because P has epitomised them away. It is possible, however, given (as noted above) that there seems to have been little controversy on the subject, that a single lemma was thought sufficient to give a summary of the subject. Apart from this, one could say that there is an internal diaeresis or diaphonia in this lemma, because it first shows how conception comes about and then tells us how it is prevented or impeded.

c Rationale–Structure of Chapter

The single lemma with the name-label Aristotle gives a description which is compatible with Aristotelian doctrine, e.g. as presented in *De generatione animalium*, but is not based on any extant passage in his works, as noted by Rose (1863) 382. For ἀπὸ τοῦ παντὸς ὄγκου μέρος τι τοῦ καθαροῦ αἵματος compare τὸ ὑπολειφθέν at GA 1.19 727b17. The explanation is couched in physiological terms with an emphasis on the role of the female. But neither is the role of heat mentioned (cf. GA 2.4 739b4, Galen *Def.Med.* 451) nor the pneumatic composition of the semen (GA 2.3 736b30–737a1). On the hematogenic theory of conception see further Lesky (1951) 134–145.

The second half of the lemma, which gives reasons why conception does not occur, anticipates and partly doubles up on ch. 5.9, where the subject is mentioned in the heading (οὐ συλλάμβανει).

d Further Comments

Individual Points

§1[1] προανελκομένης. In antiquity the womb is regarded as an independent organ which can move of its own accord and cover quite a distance within the female body.

§1[6] We follow Mau and Lachenaud against Diels in preferring δι' ἀσθένειαν (τῶν γυναικῶν) as recorded in the majority of the mss. of P^B against ἀσθένειαν as found in the oldest ms. M. It felicitously preserves the symmetry with the final phrase δι' ἀτονίαν (τῶν ἀνδρῶν).

§1[7] The unusual phrase δι' ἀτονίαν τῶν ἀνδρῶν, here in both P^{BQ} and G, is paralleled in G's version of the Diocles lemma 5.13.2 (fr. 43c Van der Eijk), where it is not found in P. The word ἀτονία meaning 'poor condition' does not occur in the Aristotelian corpus. For use of the term for the womb cf. the chapter heading of Soranus *Gyn.* 3.47 Περί ἀτονούσης μήτρας. It is possible that the Aristotelian doxa has been contaminated with Diocles' views on the subject, or that two original doxai have been coalesced. See further at ch. 5.13 Commentary D(d)§2.

Commentary

A *Witnesses*

P records eight mainly brief lemmata, the most in number (though not in length) of any chapter in Book 5. G epitomises radically, taking over only the first two and the last. Ps takes over the chapter heading and makes light use of §4, but the remainder of his chapter contains material that does not appear to derive from the *Placita*. The rare name-label Leophanes, found only here in what remains of A, occurs in Photius' index of Stobaeus (*Bibl.* 167, 156.8 Henry). Diels rightly deduced that the Anthology in all likelihood originally included this doxa, *DG* 420b1; see also Elter (1880) 46.

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. The most important parallel text in the proximate tradition is found in Censorinus, who clearly states the quaestio involved at §6.4, *ut mares feminaeve nascantur, quid causae esset*, indicating very explicitly that the question is one of cause (cf. πῶς in A's chapter heading). There is a good but not complete overlap with A and, as we shall below in sub-section (2), with Aristotle. Five of the seven separate name-labels in A are found in Censorinus (excluding Leophanes and Leucippus), but his Alcmaeon does not appear in A. Two other documents, ps.Galen *Definitiones medicae* and Lactantius contain anonymised parallels for A's doxai (texts below section E(a) General texts). Lactantius' source is likely to have been Varro (see our discussion on Lactantius' evidence in chs. 5.5–6). Most intriguingly mention is made of the doxa of Anaxagoras in Hippolytus' summary of his doctrine (1.18.12, text below), another example of the links between A and the *traditio proxima* that are so frequent in the earlier books of A's compendium. It remains puzzling that he does not refer to Alcmaeon despite his appearance six times in this book, so we may have a case of P's abridgement here.

(2) *Sources*. Going further back, it is clear that the general inspiration for this and some following chapters in A is Aristotle's treatment of these questions in Book 4 of *De generatione animalium*. The questions posed in chs. 5.7–8 and 5.11 are discussed in *GA* 4.1–4; see for example the summary at 4.3 769b3–

10 which emphasises the aspect of cause (αἰτία) and outlines the subjects of all three chapters (text below section E(b) General texts). The specific subject of sex differentiation is discussed in *GA* 4.1. Of A's seven name-labels no less than four (Anaxagoras, Empedocles, Democritus, Leophanes) occur in this passage. Indeed A explicitly draws attention to this source when he says that Leophanes 'was mentioned by Aristotle' (765a25), adding this comment because perhaps the man was known from no other source; see below section E(b)§5. It is to be noted that three of the name-labels in A are not found in Aristotle (Parmenides, Hippo and Leucippus, and also not Alcmaeon who only appears in Censorinus), and that only philosophers are cited, without any reference to physicians.

Another striking feature of our chapter—in contrast to those that follow—that all the doxai in the chapter give views of the Presocratics. Thanks to Galen (text below E(b)§1) we actually have brief quotations from the poems of Parmenides and Empedocles which give a glimpse of the original material on which the doxai are based (and which will have been known to Aristotle). Moreover, the latter's discussion of Democritus' view at *GA* 4.1 764a6–11 (text below section E(b)§7) in which the causality of heat and cold is rejected, may indicate that the atomist responded to these earlier views (but it could also be an editorial comment by Aristotle himself).

All in all, this chapter provides a fascinating insight into the layered nature of the sources that underlie A's treatment of a question in biology. For further analysis see further below at section D(e). For literature on conception and birth in ancient sources see above, ch. 5.3 Commentary B.

C Chapter Heading

Another chapter heading with πῶς indicating 'cause' (see on 5.6 Commentary C). The verb γεννᾶται, which deviates from the usual γίνεται (cf. chs. 5.2, 6, 8, 10 etc.), is well enough attested (P^{BQ} S^L) to be retained (G and Ps revert to the more common verb).

On the chapter headings in S^L see above, ch. 5.4 Commentary C. The heading for this chapter is identical to that found in the tradition of P, but there are no grounds for concluding that it must be interpolated from there.

D Analysis

a Context

As the chapter's contents reveal, sex determination could be related to semen (i.e. prior to conception) or factors relating to reproduction (i.e. after conception). A has chosen to place it after his treatment of both subjects, i.e. semen in ch. 5.3–5, conception in ch. 5.6. The result is an admirably logical sequence of topics.

b Number–Order of Lemmata

As noted above, this chapter as preserved by P is the one with the most doxai in Book 5. It may well have been one of those chapters in which he chose to retain most or all of the doxai in his source, as he did for example in chs. 3.1–2, but we cannot be sure (and see below on the absence of Alcmaeon). Since P seldom interferes with the order of the doxai, the sequence of lemmata is also most likely to derive from A, but here too certainty is not attainable.

c Rationale–Structure of Chapter

Analysis of the doxai's contents and comparison with the proximate tradition reveal that the eight lemmata of chapter are organised in a number of different ways.

A first diaeresis separates the first two doxai from the remaining six. In §§1–2 the generation of males and females is explained through the factors of heat and cold, but these are immediately related to their origin from the earth. The remaining doxai §§3–8 describe their occurrence through the normal process of intercourse between the sexes. The difference can be explained in terms of two kinds of explanation: the first is *protological*, i.e. the present-day situation results from what happened during the original cosmogony; the second is *actual* or *contemporary*, i.e. describing what happens now without reference to origins. Protological explanations are invoked in Empedoclean doxai earlier at A 4.22.1[2], where *πρώτου* should not be excised, see our Commentary ad loc. and also later at A 5.18.1 and explicitly at 5.19.4. A parallel can be drawn in the connection between cosmogony and cosmology in ch. 2.8 on the tilting of the cosmos. In the present chapter the distinction helps to explain the fact that there is a double reference to doxai of Parmenides in the same chapter.

It is apparent that the first two doxai form an antithetical pair. This is very deliberately emphasised through the term *ἀντιστρόφως*, used only here in the surviving *Placita*. The explanation of sex differentiation through the factors of heat and cold is confirmed by evidence in Aristotle's biological works *De partibus animalium* and *De generatione animalium*; see the texts cited below section E(b) §§1–2. Both philosophers are named in the former work, only Empedocles in the latter. Indeed, the antithetical pair of doxai surely has its origin in the text at *PA* 2.2 648a25–31 in which it is stated that according to Parmenides women are hotter than men (also anonymously stated at *GA* 4.1 765b19–22), whereas Empedocles holds the opposite view. Here the chronological order has been preserved, whereas in our chapter it has been reversed, with Parmenides presented as unhistorically responding in opposition to Empedocles. Remarkably Aristotle himself presents as factual (or endoxic) an association between

male births and the (cold) north winds and female births and the (hot) warm winds; see *HA* 6.19 574a1–2, *GA* 4.2 766b34–35, 767a8–13.

A text in Galen also opposes the two philosophers and cites a line of poetry for each point of view (text below section E(b)§§1, 4). There is no trace of this opposition in Censorinus, but heat and cold form the third of the positions in ps.Galen *Def.Med.* This latter text differs, however, in attributing the sex differentiation to the semen rather than to the womb (this is not clear in A either). On Empedocles' theory see further Lesky (1951) 33–36. On the coupling of Parmenides and Empedocles in §§1–2 (also Parmenides in §4) see further Mansfeld (2015e) = (2018d) 192–193.

At §3 there is a silent transition to the remaining doxai, which explain the generation of males and females with reference to the normal processes of sexual intercourse alone. The first doxa ascribed to Hippo (on the name-label see below, section D(d)) stands on its own in giving an explanation of sex differentiation in terms of the nature of the semen involved in the conception (it must be male if the doxa is to be consistent with ch. 5.5.3). Comparison with Censorinus is instructive. He mentions Hippo together with Alcmaeon, the latter explaining the difference with reference to quantity, the former quality of seed. An Alcmaeon doxa may well have been originally present in A. On his prominence in Book 5 see Commentary on 5.3, D(d)§3. On this explanation see further Lesky (1951) 23–29.

The next two doxai ascribed to Anaxagoras–Parmenides and Leophanes (§§4–5) should be taken together. The explanation for this group is given in terms of differentiation between right and left, both with regard to the testicles and locations in the womb. For Anaxagoras the source is Aristotle *GA* 4.1 763b30–764a1, for Parmenides (ultimately) the line of his poem cited by Galen (fr. 28B17 DK). The theory allows for four possibilities: semen from right testicle in right part of womb = males, semen from left testicle in left part of womb = females, semen from right testicle in left part of womb = effeminate males, semen from left testicle in right part of womb = manly females. The doxa in A, which only allows for two possibilities, is not consistent with this more refined scheme. Tarán (1965) 264, building on Diels *DG* 194, proposes that the final two words be emended to γίνεσθαι (τὰ μὲν) θήλεα (ἀρρενικώτερα, τὰ δὲ ἄρρενα θηλυτέρα). Another possibility is Diels' simpler suggestion γίνεσθαι ἀρρενοθήλεα. But the mistake may well have lain with A and it would be unwise to introduce the emendation into the text. Both Censorinus and ps.Galen *Def.Med.* cite the view correctly as one of the possible explanations (but the former differs in attributing it also to Empedocles). The full four possibilities are given by Lactantius *Op.D.* 12.12–13, but without a name-label. On this explanation see further Lesky (1951) 39–56.

The name-label Leophanes is unique in the *Placita*. We may surmise that A (or his tradition) mentions the reference to him in Aristotle, i.e. at *GA* 4.1 765a25 because that is his only source of information about him. In this passage he is mentioned only for the specific detail of trying to determine the sex by tying up the left or the right testicle during intercourse. In A his doxa is generalized to a simple system where semen from the right testicle produces males, from the left females. Since this differs from the previous doxa if that is interpreted as a binary scheme (right right and left left as males, right left and left right as females), it is possible that A intended a diaphonia between these views, as in the case of §§1–2. But if so, it is not formulated at all clearly.

The final three doxai §§6–8 can be taken together. The doxai of the two atomists take as their starting-point the pan-genesis doctrine (see A 5.3.6). As A's slightly disparaging comment makes clear, Leucippus' explanation amounts to no more than a statement of the difference. The details in the original treatise (not transmitted via Aristotle) must have been scanty. At 1.25.4 A gives a rare quotation from Leucippus' Περὶ νοῦ. The present information may allude to the same work, which may have contained not only epistemology and psychology, but also physiological theories. It is rather unusual for the doxographer to include a critical remark; it may well have been taken over from his source. For example there are complaints about lack of precision and appropriate information at Theophrastus *Sens.* 4, 9, 33, 49, 92. Similarly Diogenes Laertius (or his source) will from time to time include criticism in his doxographical accounts, e.g. at 2.1 (on Anaximander), 9.9 on Heraclitus. On rare occasions A himself records critical remarks (ἐνστάσεις) of Peripatetic descent, notably at ch. 1.3.2 & 1.3.3.

Democritus, as Leucippus' pupil, is placed after him and by implication gives a more satisfactory explanation. The distinction is made between parts held in common by the two sexes and parts that they have individually as males or as females, i.e. the sexual parts. Their nature is determined by 'dominance', presumably of the male or the female semen (the existence of the latter is acknowledged for Democritus in A 5.5.1). This report could have its origin in Aristotle's mention of Democritus' theory in *GA* 4.1 765b6–11, where dominance is explicitly attributed to the role of the semen. Censorinus, however, appears to add further details involving the speed of semen, i.e. sex is determined by whichever semen gets to the vital place in the womb first. The anonymous reference to the ἰδιοσυγκρασία of the semen in ps.Galen would appear to be a reference to Democritus' theory. On this theory and the role of 'dominance' see Lesky (1951) 73–74.

The final doxa again has the name-label Hippo. It appears to have been added because it too involves the notion of 'dominance'. The two factors

involved are the male semen and the nutrition in the womb offered by the woman. On this view see further Lesky (1951) 27–28.

All in all, this chapter is another excellent example of the diaeretic method that A uses so frequently in his compendium. The chapter divides firstly, as noted above, into two separate temporal dimensions, (protologically) at the beginning of zoological life (§§1–2) and now (§§3–8). There are also four kinds of explanation in terms of (1) temperature of the womb, (2) nature of the semen, (3) right and left location (of testicles and womb), and (4) dominance. Within the four explanations there are further diaereses, certainly in (1), less clearly in (3) and (4). In (2) there is only one doxa, but here an Alcmaeon doxa may have been epitomised away by P. As we shall see below in section D(e), these diaereses correspond at least in part to what we find in the proximate witnesses.

In this chapter two name-labels are repeated. In the case of Parmenides there are explanations in terms of heat and cold (§1) and right and left (§4). These could be reconciled (parallelism of geographical and physiological characteristics), but this is no concern of A. Similarly the two doxai attributed to Hippo are compatible but have different roles to play within the chapter. As often doxai and the doctrinal positions they represent are more important for A than name-labels.

d Further Comments

Individual Points

§1 The mss. of G add to Empedocles the name-label Asclepiades. Diels *ad loc.* suggested it might have been imported from ch. 5.10 where the two name-labels follow each other (5.10.1–2). But he did not notice that in A 5.21.2 Asclepiades is also associated with a doxa that differentiates between male and female embryos in terms of heat (cf. also heat and cold in 5.30.7). This doxa is retained by G in his §125. Jas (2018a) 334 argues the name-label is likely to result from a marginal note referring to this other doxa that found its way into the text. This argument is not conclusive. The additional name-label might have referred only to the first part of the doxa. A can be quite careless in such matters. It should be noted, however, that G's reading is not supported by the papyrus snippet. Since G is opposed by all three other witnesses ^{PBQ}, it is perhaps safer to follow Jas' lead and not include the additional name in P, and so not in A as well.

§§1–2 We have cited below in section E(b)§§1, 4 the text of Galen's comment on Parmenides and Empedocles, which includes brief quotes from their poems, as it is found in the manuscripts. In determining the best text a distinction needs to be made between what the reading in Galen should be and what

the original text in the poems might have been. The doxographical contents of Galen's remark may have involved alteration of the original text at some stage in the tradition. It is certainly suggestive that the Empedoclean text as transmitted contains a reference to the earth (γᾶίης). This line could thus have been among the sources for A's doxa. We might translate 'for in the warmer part of the earth the male was found'. There is thus a link between physiological and geographical location (but this is not found in Aristotle's reference to Empedocles' view). See also the comment by Deichgräber (1930a) 375–376 in his review of Wenkebach's studies on Galen's text.

§3 The name-label Hipponax, here and in §8, is confirmed for the tradition of P by both Q and in G (§8 only). As Censorinus proves, it must refer to the philosopher Hippo, already cited in A 5.5.3 (and elsewhere only at A 4.3.9 on the nature of the soul). The alternative form of the name is only found with certainty here. Does the name go back to A, or is it a mistake introduced in the tradition of P? It would be most helpful to know what stood in S, but the name preserved by Photius in his listing of names (114b3) is the solecism Ἰππώνου, which might be the result of a misunderstood abbreviation on the part of a scribe (cf. Diels 1881, 346, note at DK 1.386). It should be noted that this name would be based on A 5.5.3, the first occurrence of the name in the work (ch. 4.3 was copied out later in *Ecl.* 1.49). It is difficult to believe that A would have not realised that the name-label in ch. 5.7 was the same as that in ch. 5.5. The reference to the philosopher at Anon.Lond. 11.23 unfortunately cannot help, since *pace* Jas it appears that both versions of the name can be read there; cf. Diels VS 233, Manetti (2011) 21. We apply the principle of charity and opt for the reading consistent with ch. 5.5.

§§6–7 μόρια in §6 must mean the constituent or vital parts, i.e. the sexual organs, whereas μέρη in §7 is used more generally and refers to all the parts of the body. It is difficult to be precise in what noun is understood with ἐξ ὁποτέρου, but the phrase refers to either parent or their semen. Remarkably the same word ὁποτέρου occurs at Aristotle *GA* 4.1 764a10, in the passage which is surely the ultimate source of the doxa.

§7 The theory of sex determination through 'dominance' is also attributed to the Peripatetic Strato at Galen *Sem.* 2.5.12, whose view as noted by De Lacy (1992) 242 resembles that of Democritus. Strato is cited together with the atomist in A 5.4.2 and on his own at A 5.8.2. It is not unlikely that his name-label was originally present in this chapter and excised by P.

e Other Evidence

As noted above in section B, the commonalities between A and the proximate witnesses are such that all documents must belong to a shared tradition. Cen-

sorinus has three of A's four main kinds of explanation: (1) nature of semen (Alcmaeon, Hippo); (2) dominance (Democritus, Parmenides); (3) right and left location (Anaxagoras, Empedocles). Surprisingly the explanation involving heat and cold is missing (and his linking of Empedocles with the right/left view must be wrong). Ps.Galen also has three of the main kinds of explanation, all without name-labels: (1) right and left location; (2) dominance (see above, section D(c) on how κατὰ τὴν τοῦ σπέρματος ἰδιοσυγκρασίαν should be interpreted); (3) heat and cold. Galen's comment on Parmenides and Empedocles may also have some kind of link to a doxographical tradition.

This chapter thus gives us a valuable glimpse of how the doxographical tradition derived its material. Five of the eight doxai can be traced back to works of Aristotle (esp. *GA*, but also *PA*), with even the occasional verbal reminiscence (see above, section D(d) on §7). As noted above, A himself refers to Aristotle for the mention of the rare name-label Leophanes (but in this doxa he uses the term δίδυμος and not ὄρχις as in Aristotle). However, the diaeresis that structures A's chapter cannot be clearly discerned in Aristotle's treatment. The diaphonia between the first two views is briefly noted in *PA* 2.2, but not in *GA* 4.1. Three of A's doxai cannot be paralleled in Aristotle (Hippo twice and Leucippus) and, as we saw, A does not mention the key figure Alcmaeon, to whom Censorinus does refer in his report. The doxographical tradition must therefore at some stage not only have absorbed additional views of Presocratic philosophers but also structured the collected material in ways that built upon but (as usual) went beyond the Stagirite's presentation in his biological works. Diels saw in this convergence evidence for the existence of the *Vetusta placita*; see *DG* 188–201, but we prefer to speak of 'intermediate doxographical traditions'.

For an intriguing Jewish rabbinic solution to the problem based on whether the seed of the woman or the man is emitted first, see Van der Horst (2018) 111–112.

Commentary

A *Witnesses*

There are four witnesses to this chapter, P^B, Q and G, three of whom record the three same lemmata (with some abbreviation in G), and L who offers a paraphrase, first a full one of the second lemma, followed by a partial one of the first. Ps does not refer to the chapter in his *Omn.Doctr.*, but there may be a reminiscence of the heading in *Opusc.* 16.7 (a possible reference to the first doxa in one of his minor works, Συλλογαὶ διάφοροι καὶ ποικίλαι, is taken from Philoponus; see text below section E(b)§1). On the inclusion of the heading in S^L see the Commentary on chs. 5.5 and 5.6.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The only closely related text is found in ps.Galen *Def.Med.* 449, which gives significant parallels to the material in all three doxai, though without name-labels.

(2) *Sources.* Aristotle raises the quaestio of the occurrence of *monstra* in *GA* 4.3–4. It is introduced at 4.3 767b7, where the term τέρας is used, as part of the subject of resemblance to parents. It is treated at considerable length, but there are no direct links with A's chapter. This is illustrated by the fact that his doxographical report on Democritus (4.3 769b30–34 = 68A146 DK, cited below—the text is partly corrupt) appears to correspond to the first explanation in the list that A attributes to Empedocles.

C Chapter Heading

There is agreement on the heading in all the witnesses that we have (the heading in Ps is an expansion). Its formulation follows on from that of the previous two chapters, with πῶς indicating that the chapter deals with the cause of the phenomena (note the term αἰτιολογία in the first doxa and Ps' interpretation διὰ τίνα αἰτίαν). It is thus yet another example of the question type of διὰ τί. On this question type see ch. 1.4 Commentary C.

On the chapter headings in S^L see above, ch. 5.4 Commentary C. The heading for this chapter is identical to that found in the tradition of P, but as in the case of the previous chapter 5.7, there are no grounds for concluding that it must be interpolated from there.

D Analysis

a Context

The subject follows on logically from the previous chapters: from chs. 5.3–5 because of the crucial role of male and female semen; from 5.6 because the causes relate primarily to the process of conception; from 5.7 because of the aspect of differentiation; and from both 5.6–7 through the role of the womb. All these factors here result in defective births.

b Number–Order of Lemmata

It can be considered almost certain that the chapter is incomplete as transmitted by P. For example, as noted above, Aristotle has a section on Democritus' treatment of the question which gives a different cause (mixing of semen leading to disorder of parts, cf. also the text in ps.Arist. *Probl.* 10.61) that has not been included. One might have expected some illustrations of the kind of deformation involved (as in the *Def.Med.* text). Also lacking is any reference to theories involving damage at the moment of birth, e.g. Parmenides fr. 28B18 DK (on which see Bien 1997, 85–95).

c Rationale–Structure of Chapter

The three doxai are so compactly formulated as to be quite cryptic. There are ten causes listed, all using the παρά plus noun or infinitive construction: five in the first doxa (Empedocles), four in the second (Strato), and one in the third (doctors). Taking our cue from the parallel at *Def.Med.* 449 (on which see below, section D(e)), we can discern two main clusters of causes, the one involving the nature or interaction of both male and female semen, the other movements of or occurrences in the womb. Thus in the case of the second doxa attributed to Strato, the first two relate to semen, the last two to the womb, but in the absence of the relevant possessive genetives, the doxai are unclear. We note

that there is also overlap between the various causes presented. Thus Strato's first and second cause are parallel to Empedocles' first and second, his third to Empedocles' third, while the fourth is no doubt linked to that of the doctors in the final lemma.

The focus on the womb that we find in all three doxai recurs in A 5.9.3 with the name-label of the doctor Erasistratus, which suggests that the name of the Alexandrian may lie behind the anonymised τῶν ἱατρῶν τινες here. The same may be the case in A 5.13.1, where the name-label is simply οἱ ἱατροί.

A thorough analysis of the doxographical material in A, supplemented by ps.Galen and Aristotle, has been given by Bien in his monograph on defective births (1997). He argues (67–84) for the following categories of causes:

- (a) excess or deficiency of semen (Empedocles, Strato, ps.Galen *Def.Med.* without name-label, Democritus in Aristotle);
- (b) disturbed movement of semen (Empedocles, Strato);
- (c) pneumatic causes (Strato, cf. doctors);
- (d) anomalies of formation in the womb (Empedocles, doctors, anonymi in ps.Galen *Def.Med.*).

Because of the cryptic nature of the text, this taxonomy of causes cannot be considered certain. The category (b) is more likely to refer to the womb. In addition *pneuma* plays some kind of role in both (c) and (d). What all these texts have in common, as well noted by Bien (1997) 77, is that they focus on physical causes of misformation, most involving the role of semen. There is no use made of the concept of 'powers', as in Parmenides fr. 28B18 DK, or of the concepts of form and matter, as in Aristotle's treatment (cf. *GA* 4.3–4).

Because of the various overlaps noted above, A's three doxai do not form as clear a diaeresis as we find in ps.Galen. At most it can be said that the second doxa attributed to Strato seems to have a bridging role, since its first three causes link up with the first doxa, whereas its fourth involving *pneuma* makes a link to the third doxa of the doctors. But our doxographer does little more than list the causes and gives no clear guidance on how they can be systematically analysed. In particular it is noteworthy that no correlations are made with the chapters on semen presented earlier in ch. 5.3–5. The role of semen is stated in the case of the first cause (παρὰ πλεονασμὸν σπέρματος) and after that is not referred to or explained in any way. This is quite disappointing.

In this context A's unparalleled remark that Empedocles 'plainly anticipates almost all the causes that can be given' is of interest because it expresses his conviction that he is presenting a reasonably exhaustive list. The claim is rather overblown, however, because in fact other causes can be given. For example, the questions of flawed development during pregnancy and physical or mental impairment resulting from occurrences during the process of birth are not

mentioned. In addition A does not mention the special case of hermaphroditism, which attracts a great deal of comment and attempted explanation in ancient texts (and has its own section in the doxography at ps.Galen *Def.Med.* 448 just preceding that on *monstra*).

d Further Comments

Individual Points

§1 The phrases *παρὰ πλεονασμὸν* and *παρ' ἑλλειψιν* are exactly paralleled in ps.Galen *Def.Med.* (although the order is reversed, as in Lydus who uses the different term *ὑπερβολή*) and are illuminated by the examples he gives, e.g. excessively large or small heads, or an excessive (or, we might add, deficient) number of fingers or toes. For *παρὰ τὴν εἰς πλείω διαίρεσιν* one might think of multiple heads (cf. Arist. *GA* 4.3 769b27). But for twins see the next chapter, 5.10. It is unclear, however, what kind of cause 'inclining away' (*παρὰ τὸ ἀπονεύειν*) might be. It could refer to the semen which 'inclines' away from realizing all its contents (Empedocles is following the pan-genesis doctrine of conception) and so results in a lack of vital parts, such as a limb or even a head. But the verb is used of the womb elsewhere, e.g. in the *Corpus Hippocraticum* at *Mul.* 47 ἦν αἱ μήτραι κατὰ τὰ ἀριστερὰ νεύωσι, so it may refer to the wrong position of the womb, which can interfere with the proper reception of the semen; cf. the emphasis on the role of the womb in ch. 5.6.

Empedocles famously described the birth of strange creatures with double faces etc. in his cosmological poem (cf. fr. 31B57–61 and A 5.19.6 DK). Unlike in A 5.7.1 and elsewhere, the cosmogonic aspect of the topic does not occur here, but may have been excised by P in the process of epitomisation. Lucretius *DRN* 5.837–855 describes the birth of various kinds of monsters, including hermaphrodites, when the earth was young.

§2 Lydus' mistake in reading Πλάτων instead of Στράτων also occurs in P and his tradition at 5.24.4 if Corsinus' emendation is accepted (as we do). It is a commonly occurring error. In this case (unlike in ch. 5.24), it has had the consequence that the collections of Strato's fragments by Wehrli (fr. 99) and Sharples (fr. 74) overlook Lydus' text. It is cited at M–R 1.169.

The reading in G *ἐμπνευμάτωσιν* is to be preferred above *πνευμάτωσιν* in P^B and L because it is a much more common physiological and medical term and is also used, in a different context, in ch. 5.6.1. When discussing the pathology of the womb, Soranus *Gyn.* 3.47 mentions the *ἑκκρισις πνεύματων*, but not that these lead to the womb's twisting.

For *μετάθεις* one might note Aristotle's listing of kinds of deformations observed in animals at *GA* 4.3 770b37–771a2 (text below section E(b)§2). He gives the example of animals having organs switched around, e.g. the liver on

the right and the spleen on the left. This supports the interpretation that the phenomenon relates to the womb.

§3 Soranus *Gyn.* 3.47 devotes a chapter to the inflation of the womb, but does not describe the phenomenon of ‘twisting’ or relate it to the occurrence of *monstra*.

e Other Evidence

As noted above in D(c), the brief report in ps.Galen *Def.Med.* 449 has a clearer structure with its diaeresis between (a) the twisting of the womb (cf. A §3) and (b) deficiency or excess of semen (cf. A §1), which reverses the order given to the causes in §§1–2. However, the parallelism of the two texts is sufficient to indicate a common tradition (cf. ch. 5.7), in which Empedocles will have played a prominent role. It is very likely that A based his material, and no doubt also his additional comment, on what he found there. This tradition will have taken its lead from Aristotle’s treatment of the subject in *De generatione animalium*, but as we observed in section B above, does not appear to have been strongly dependent on it.

Commentary

A *Witnesses*

The three chief witnesses for Book 5 all furnish three doxai. Ps retains the heading and completely rephrases much of the contents. In S only the chapter heading remains; see below, section C. The papyrus fragment only shows a few letters but does appear to confirm a reading of G (see below, section D(d) on §3).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The main relevant text is a brief section on the multiple causes of infertility in both men and women in ps.Galen *Def.Med.* 442,

i.e. strictly speaking parallel to ch. 5.13 rather than this chapter. The two causes mentioned for women are only vaguely similar to what is found in A here. Censorinus, because he is celebrating a birthday, is not interested in why births do *not* take place. At Lucretius *DRN* 4.1233–1262 there is also a passage on female infertility, but the main causes it puts forward is the unsuitability of the male semen, unlike in the present chapter which highlights factors relating to the womb and female semen. On this passage see further on ch. 5.13.

(2) *Sources*. The question of infertility or sterility (ἄγονία, ἀτεκνία) is raised and briefly discussed by Aristotle in *GA* 2.7 and in more detail in *HA* 10.1–5 (if indeed this book is genuine—recently its authenticity has found defenders in Balme and Van der Eijk, the latter arguing that it is a medical rather than a physiological work; see Van der Eijk 1999). The aetiologies found in these texts (and the *Epitome* of Aristophanes of Byzantium), which do not mention any predecessors, do not appear to have exercised a strong influence on the current chapter, although they may have encouraged the doxographical tradition to include the topic. Hippocratic texts discuss the subject, e.g. *Mul.* 213, *Aph.* 5.62, but it is plain that their terminology bears little resemblance to A. Nevertheless such material could well have been a distant source. It is striking that, in contrast to all the chapters in Book 5 so far (except the monolemmatic 5.6), the chapter does not refer to any pre-Aristotelian thinkers.

C Chapter Heading

The chapter heading uses the formula διὰ τί with a verb to inquire after the question type of the cause. This way of signalling and starting a question is well known as a feature of the *Problemata* literature, cf. M–R 2.1.169, and above ch. 1.1 Commentary C. In A it has so far been used only as the second part of the heading of 2.30 (Περὶ ἐμφάσεως αὐτῆς [sc. σελήνης] καὶ διὰ τί γεώδης φαίνεται). In Book 5 we note use of the same formula in chs. 5.14 and 5.18, but the parallel chapter 5.13 has Πῶς στεῖραι γίνονται αἱ γυναῖκες καὶ ἄγονοι οἱ ἄνδρες. The formulation of the chapter's topic recalls some phrases in Aristophanes of Byzantium (ταῖς πυκνὰ συνουσιαζομέναις, οὐ συλλήψεται; see texts below), but is otherwise difficult to parallel.

The chapter heading is included in the list in Laurentianus ms. of S. There is no particular reason to suggest that it is interpolated from P. Wachsmuth did not include it in his edition as a sub-heading following *Ecl.* 1.42.8, but this was most likely due to an oversight. On the chapter headings in S^L see further above ch. 5.4 Commentary C.

D *Analysis*

a Context

This chapter on female infertility would appear to be misplaced, since it interrupts the sequence on types of conception (chs. 5.7 males and females, 5.8 monstrous births, 5.10 twins and triplets). It would have been better placed after ch. 5.6 on conception (note the same terminology in the chapter headings). Another difficulty is that its theme is treated again in ch. 5.13, with the difference that the latter chapter deals with the infertility of both women and men. If it had been placed closer to that chapter, the reduplication would have been more apparent.

b Number–Order of Lemmata

The lack of parallel material makes it quite impossible to gauge whether the original chapter in A had more than the three lemmata preserved in P.

c Rationale–Structure of Chapter

The first doxa is introduced with the name-label ‘Diocles the doctor’. The addition of the epithet can be explained by the fact that this is his first occurrence in the work (as far as we know). He is also the first doctor to be named in the chapters on the physiology of conception and birth which commence at ch. 5.3 (Herophilus was mentioned on dreams in 5.2). The doxa follows the same method that we saw in the previous chapter, a piling up of causes without any further explanation, all of which are introduced by causal prepositions (παρά ... παρά ... διά ... διά ... κατά). The first three reasons invoke deficiencies of female semen. The fourth involves four kinds of lack, but it is not made clear who or what suffers such lacks. One would expect for the first three at least that it is the womb. There is no mention of the organ in this doxa but the parallel doxa at A 5.13.1, which lists only conditions of the womb, confirms this interpretation. The last cause to be mentioned involves paralysis to the bodily parts in the plural, and given the context it is most likely that these too belong to the female, i.e. both semen and womb.

The next doxa attributed to the Stoics focuses on problems associated with the male member and its relation to the female womb. It is highly problematic, not for its contents, which are comprehensible enough, but because it is word for word identical to the second half of a doxa attributed to Diocles in the parallel chapter 5.13. Indeed the first two doxai in 5.9, taken together, show a strong parallelism with the Diocles doxa 5.13.2, except that the latter refers to male, and not female sterility. The parallelism emerges clearly when the texts are placed side by side:

5.9.1–2: Διοκλῆς ὁ ἰατρὸς ἢ παρὰ τὸ μηδ' ὅλως ἐνίας σπέρμα προῖσθαι ἢ παρὰ τὸ ἔλαττον τοῦ δέοντος ἢ διὰ τὸ τοιοῦτον, ἐν ᾧ τὸ ζωοποιητικὸν οὐκ ἔστιν· ἢ διὰ θερμασίας ἢ ψύξεως ἢ ὑγρασίας ἢ ξηρότητος ἔνδειαν ἢ κατὰ παραλυσιν τῶν μορίων. οἱ δὲ Στωικοὶ κατὰ λοξότητα τοῦ καυλοῦ, μὴ δυναμένου τὸν γόνον εὐθυβολεῖν· ἢ παρὰ τὸ ἀσύμμετρον τῶν μορίων ὡς πρὸς τὴν ἀπόστασιν τῆς μήτρας.

5.13.2: Διοκλῆς ἀγόνους τοὺς ἄνδρας ἢ παρὰ τὸ μηδ' ὅλως ἐνίους σπέρμα προῖσθαι ἢ παρὰ τὸ ἔλαττον τοῦ δέοντος· ἢ παρὰ τὸ ἄγονον εἶναι τὸ σπέρμα ἢ κατὰ παραλυσιν τῶν μορίων ἢ κατὰ λοξότητα τοῦ καυλοῦ, μὴ δυναμένου τὸν γόνον εὐθυβολεῖν, ἢ παρὰ τὸ ἀσύμμετρον τῶν μορίων πρὸς τὴν ἀπόστασιν τῆς μήτρας.

There is no comparative evidence among the fragments of both Diocles and the Stoics enabling us to judge the validity of the attributions. For example, it cannot be confirmed that Diocles agreed with the existence of female semen (cf. ch. 5.5, where he is not mentioned). In A 5.13.3 a quite different reason is attributed to the Stoa for the failure of couples to conceive. Van der Eijk in his discussion of this passage (2000–2001, 2.93–96) rightly notes that ‘it is not unusual in Aëtius (and in doxographical literature in general) for certain doctrines or elements of explanations to be sometimes attributed to one authority, sometimes to another’ (p. 95). He concludes (ibid.): ‘Whether these attributions are correct and have any basis in the writings of the authorities or are just fabricated by the doxographer is difficult to ascertain.’ Given the discrepancies with ch. 5.13 noted above and the surprisingly detailed medical knowledge ascribed to the Stoics in this chapter, Diels *DG* was quite right to be suspicious of this lemma; see his note ad loc. It seems most likely that 5.9.2 involves a misattribution that occurred by splitting up a single doxa recording Diocles’ views. We agree with Diels, however, that there should be no intervention in the received text.

This decision is reinforced by another feature of the chapter that must be taken into account. The final doxa attributed to Erasistratus,—who appears here for the first time in Book 5 but was already cited on the ruling part of the soul at A 4.5.3—ascribes to the female womb the cause of the failure to conceive. This means that the three doxai in this chapter form the kind of neat diaeresis so much loved by A (and also by P): §1 explanation with reference to female semen; §2 male member; §3 female womb. When we take into account that a diaeresis, though of a different kind, is also present in ch. 5.13 (see discussion there), it must make us suspect that the present text has been manipulated in order to provide an easily understood (and remembered) spectrum of aetiologies. The name-label of the Stoics may have been misplaced in the process. In chapters such as this one the setting out of the causes is patently more important than the identification of the philosophers or doctors who may have put forward these views.

On the relationship between this chapter and ch. 5.13 on the same topic and for a comparison of the doxai in them see further the discussion (with parallel columns) at Runia (1999a) 222–224.

d Further Comments

Individual Points

§3 For the final words G's reading τυγχανῇ οὔσα is supported by the papyrus, and so should be preferred. P^{B(I,11)} are lacking a verb for the final clause, which suggests it may have fallen away. The placement of ἦ in P^{B(111)} is awkward, which also points to a later addition. According to the comment on the papyrus fragment (Barns-Zilliaceus 1960, 83), 'the superlineations [in lines 1–3] presumably represent final ν, but it seems impossible to restore from the texts of [Plut.] or G as they stand.'

In HA 10.4 Aristotle notes that growths or sores on the mouth of the womb can be an obstacle to conception (text below section E(b)§3). As Garofalo (1997) 79 in his discussion of the lemma notes, the expected reference to distension of the womb (cf. A 5.8.3, 5.13.1, Arist. HA 10.4 636a28) is not given here.

e Other Evidence

The very brief treatment in ps.Galen *Def.Med.* 442 focuses on the role of the womb with only two alternatives, that infertility is caused by the womb being chilled or that it is excessively 'fat' or fleshy (for the meaning of καταπίμελος cf. Soranus *Gyn.* 4.5.1). Even though there are only two reasons, this is more a listing than a diaeresis, similar to the piling up of causes in A. For chilling cf. §1, but as noted above A does not make explicit whether the lack is related to semen or to the womb.

Commentary

A *Witnesses*

The three witnesses to A in the P tradition, P^B, Q and G, all record four lemmata. Ps also makes use of all four doxai, and contrary to his usual practice, includes a name-label, i.e. Erasistratus. In the remains of S's ch. 1.42, however, only the heading is preserved.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* Both Censorinus and ps.Galen *Def.Med.* record discussions on the topic of twins as part of their treatment of the topics relating to birth. Censorinus' two name-labels are both Presocratics, Hippo (cf. 5.5, 5.8)

and Empedocles. For the latter he records the cause as division, the same as in A. The connection of the sex of the twins to the heat of the womb would appear to be the theory criticized by Aristotle in *GA* 4.1, but it has been revised to accommodate different sexes (cf. Lesky 1951, 36 f.). The first of the views put forward by ps.Galen may also refer to the Empedoclean doxa. His second, the theory of superfetation, is the same as A's third view. The third view, introduced by ἡμεῖς δὲ φάμεν, is the writer's own. But what does he mean by εἰς ἄμφω ταῦτα? Rathmayr's view that it refers to places in the womb is persuasive. It would then be the same view as found in the final doxa in A. The text may be defective.

(2) *Sources*. Although Aristotle mentions the topic of multiple births several times, he does not present a systematic discussion of the phenomenon and its causes in either *De generatione animalium* or *Historia animalium*. In Aristophanes of Byzantium's *Epitome* the Stagirite is attributed with two views, division and superfetation. The material in the passage (including two quotes) cannot be found in the Aristotelian corpus and is so included in the fragment collections of Rose and Gigon. Aristotle's views exerted much influence on later writers, e.g. Pliny at *Nat.* 7.48–49. The theory of multiple locations in the womb is also found in the Hippocratic corpus (*Nat.Puer.* 31) and Anon. Bruxellensis 26 (texts below section E(b)§4). On the subject of the views on twins in antiquity see the book-length study by Rathmayr (2000), with examination of texts at 53–69.

C Chapter Heading

The chapter heading again asks the cause, using πῶς as in the parallel chapters 5.7–8. G abbreviates his heading to twins only, but refers to the phenomenon of triplets in §§2 and 4. The combination of twins and triplets in the heading or quaestio is also found in ps.Galen *Def.Med.* and Erotianus (texts below).

On the chapter headings in S^L see above, ch. 5.4 Commentary C. As in previous chapters, there are no grounds for concluding that it must be interpolated from P. The word order in S^L differs slightly from that in the Byzantine mss. of P, but interestingly it is the same as is found in the papyrus snippet.

D Analysis

a Context

After the interruption of the misplaced ch. 5.9 on female infertility, the present chapter completes the sequence of various kinds of conceptions: male–female, monstrous births, twins–triplets. A slightly different and more logical sequence is found in ps.Galen *Def.Med.* 446–449: male–female, twins–triplets, hermaphrodite, monstrous births.

b Number–Order of Lemmata

The mention of Hippo in Censorinus and the reference to Democritus' view in Aelian suggest that A may have originally had more doxai. However, as we shall see, the four preserved in P do well in covering the various positions.

c Rationale–Structure of Chapter

In marked contrast to the previous chapters the doxography presents a streamlined array of causes. Each doxa basically has a single cause introduced by a prepositional phrase (κατά ... παρά ... διὰ ... παρά), with only the first undergoing a further division (πλεονασμὸν καὶ περισχισμὸν).

(1) Multiple births are caused by an excess or a division of semen. Attributed to Empedocles, this is also basically the Aristotelian view (and see above, section B on Aristophanes of Byzantium).

(2) The cause attributed to the late Hellenistic doctor Asclepiades (cf. A 4.2.8, 4.22.2) is variation in the semen. Particularly prolific semen, like barley with double and triple stalks, produce multiple births. Perhaps there is a link to his corpuscular theory, but if there is, it is not made clear (the *Placita* never refer to it).

(3) The Hellenistic doctor Erasistratus represents the cause through superfetation, i.e. resulting from multiple acts of sexual intercourse. Aristotle too draws attention to this phenomenon for the biological world, including humans (cf. *GA* 4.4 773a34ff.). The doctor insists that a purification of the womb, i.e. a menstrual period, must intervene, which corresponds to modern theories (and in fact makes the phenomenon very rare indeed).

(4) The Stoic doxa makes use of the view that the womb has multiple locations, so that when the semen enters them, multiple births can result. The theory is attributed to Democritus and is also found in the Hippocratic corpus (see texts below). No other text confirms this view for the Stoics. The term ἐπισύλληψις is used here in a less strict sense than in §3 and means no more than 'additional conceptions'.

The diaeresis of the four doxai thus covers three main theories, with the unusual (and unparalleled) view of Asclepiades perhaps meant as a variation on the first view of seminal excess and division. The same three main views are found without name-labels in the parallel text in ps.Galen *Def.Med.*

Of considerable interest is a text in Seneca, citing his friend Demetrius the Cynic, who problematizes the subject of twins as an example of the kind of theoretical knowledge which is not necessary for practical purposes. Two main options are very compactly given for the cause, division or superfetation. He also adds the problem of the different fates of twins born almost at

the same time. But this key problem in astrological theory, discussed in depth by Augustine in *C.D.* 5.1–6, our doxographer sets aside (in contrast to what he will do at ch. 5.18.6).

d Further Comments

Individual Points

§1 It is most intriguing to observe that the reconstructed papyrus supports G's reading that the verb of thinking οἶται follows the name-label. This formulation is much more common in G (16 times, 4 in the plural) than in P (3 times) or S (only once in an excerpt from A). It suggests that these slightly otiose verbs may have been omitted as the tradition developed. Because of the agreement of G and the papyrus (Q cannot help us) we should include the verb here. We note too that the papyrus inverts the order of twins and triplets in this doxa (but not in the chapter heading). This must be a scribal error.

§2 Rathmayr (2000) 61 goes astray in claiming that Asclepiades presents exactly the same theory as Empedocles. διαφορά cannot mean 'Aufspaltung' (division). The difference is that Asclepiades attributes twins to inherent differences in semen, not what happens to the semen in the womb.

§3 The Arabic translation perhaps supports P^B's reading ἔρχεται (or ἔρχεσθαι), but Diels is right to conjecture δέχεσθαι, following the suggestion of the corrector of the Vossianus ms. δέχεται, because the phrase can then have the womb as subject.

§4 As also occurs elsewhere in the *Placita* (cf. for example chs. 4.3.13, 4.18.2), the καὶ in the final phrase καὶ τὰ δίδυμα καὶ τὰ τρίδυμα is very likely epexegetic, i.e. explaining the result of the conceptions. We indicate this as an alternative in our translation.

e Other Evidence

A's method corresponds *grosso modo* with what we find in the two proximate sources Censorinus and ps.Galen, and less clearly in Seneca. A diaeresis of main explanations is given. If the third view in ps.Galen is taken to refer to multiple places in the womb, then there is a close correspondence between his three and what we find in A, with the doxa of Asclepiades added as an additional view closely related to that of twins caused by the division of semen.

Commentary

A Witnesses

As is the case in many other chapters in Book 5 (ten cases out of thirty) our direct witnesses in the tradition of P furnish three doxai. In G the first two are conflated, no doubt through a scribal mistake, so that he appears to have only two. Ps takes over material from this chapter which he reshapes (see below, sec-

tion D(e)§3). For both the heading and in the final lines of his chapter he combines material from the next chapter 5.12. S preserves only the heading in the Laurentianus ms.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The most important parallel in the proximate tradition is again found in Censorinus, who records doxai of Empedocles, Anaxagoras and Parmenides, i.e. including two of A's three. The view of Parmenides is the same as in A, but the Empedoclean theory based on heat and cold differs. In ps.Galen *Def.Med.* there is only a brief reference to the subject in §440 as the most important evidence for the existence of female semen. The long account in Lactantius taken over from Varro may also come from this tradition. It has no name-labels and most resembles A's final doxa, though various details differ. The discussion in Lucretius *DRN* 4.1209–1232 is also similar to the doxographical texts with its use of the theory of dominance and explicit mention of the question of resemblance to grandparents and more distant ancestors. Bailey (1947) 3.1313 suggests that his source will have been Democritus as passed on by Epicurus (cf. Arist. *GA* 4.1 764a6–11 cited on ch. 5.7).

(2) *Sources.* Aristotle clearly defines the problem in *GA* 4.3, distinguishing its various sub-topics, and devotes quite a long discussion to it. He first gives his own view involving the 'mastery' (κρατεῖν) or not of the male form on the female material, but this theory has not found its way into the extant doxographical tradition. Thereafter he criticizes earlier theories which are divided into two kinds of causes, the one based on the amount or dominance of male or female semen, the other through the concept of a semen aggregate. These thinkers are called *τινες τῶν φυσιολόγων* and he clearly has various Presocratics in mind (Empedocles and Democritus are subsequently cited by name). As we shall see below, there are connections between Aristotle's two kinds of theory and A's presentation, but his text is certainly not a direct source. The author of the treatise *Περὶ γονῆς* (*Genit.*) in the *Corpus Hippocraticum* gives a full discussion of similarity to both parents as a subject that follows on from the fact that both men and women have semen. Similarly (but much later) Galen discusses similarity and dissimilarity to parents and ancestors in *Sem.* 2.1 as part of an argument in favour of both male and female semen, arguing that Aristotle's form-matter approach cannot solve the problem. He does not refer to any doxographical material.

For further analysis and discussion of the subject of heredity in ancient sources see Lesky (1951) 36–38, 44–45, 171–173.

C Chapter Heading

The formulation with the preposition *πόθεν* and the abstract noun *ὁμοίωσις* differs from what we find in Aristotle (the noun is not part of his vocabulary). For chapter headings with *πόθεν* cf. chs. 1.6, 2.3, 2.17, 4.21, 5.28. It does not ask directly for the cause (contrast Aristotle *GA* 4.3 769a1 διὰ τίνα ... αἰτίαν, also a7), but rather asks what is the determining causal factor. The mention of the *πρόγονοι* (ancestors) in the heading can be traced back to Aristotle, who mentions them in relation to this question at *GA* 4.3 767b2, 4.3 769a5. This is a notable *Leitfossil* in respect of the origin of the material taken up in the *Placita* tradition. As noted above, the subject is specifically treated in Lucretius *DRN* 4.1218–1226. These ancestors play no further role in A's chapter, which could be due to the process of P's abridgement.

On the chapter headings in *S*¹ see above, ch. 5.4 Commentary C. The heading for this chapter differs somewhat in wording from what is found in the tradition of P.

D Analysis

a Context

The question follows on from ch. 5.7 on the division of conceived fetuses into male and female. But it is not posed until the other special kinds of conception (chs. 5.8 monstrous births, 5.10 multiple births) have been treated (including the misplaced ch. 5.9). The present chapter is the first part of a diptych on similarity and dissimilarity, chs. 5.11–12.

b Number–Order of Lemmata

Given the significant parallels in Censorinus, it is quite likely that there were originally more doxai in the chapter, e.g. with the name-labels Democritus and Anaxagoras. We may have also expected the views of Aristotle and some physicians (cf. 5.12) to have been included.

c Rationale–Structure of Chapter

The three doxai each present significant positions on the chapter's subject.

(1) Empedocles invokes predominance of semen and its (internal) heat, the former to explain similarities, the latter to explain dissimilarities. The doxa seems poorly formulated, even if we take heat also to be the determining factor for the similarities. See the discussion at Lesky (1951) 37–38. The doxa is not inconsistent with A 5.7.1, but that doxa too was very loosely formulated, not indicating whether it was the heat of the semen or of the womb that was the determinative factor (according to Aristotle it is the latter; see on A 5.7.1). Empedocles is one of the theorists criticized by Aristotle in *GA* 4.3, who argues

that his theory on sex-differentiation, involving heat and cold, cannot solve the problem of how daughters resemble their fathers and sons their mothers (text below section E(b) General texts).

(2) Parmenides' explanation is based on his well-known right-left (parts of the womb) theory (see A 5.7.4) and is supported by the similar formulation in Censorinus (note that both he in 6.8 and A use a pair of temporal clauses: ὅταν ... ὅταν, *cum ... cum*). On the possibly lacunose text see further below section D(d)§2.

(3) The third doxa, attributed to the Stoics, returns to the pan-genesis theory already introduced in ch. 5.3. If both male and female semen take characteristics from all the various parts of the body, then it is not hard to explain how through the prevalence of a mother's seed a son can resemble her. Diels divides the doxa into two parts, unusually numbering the second half separately. This is misleading, since the doxa as a whole forms a single argument: first the general theory of inheritance is set out, then it is observed that females also produce semen; on that basis the theory can explain the similarities to parents. The latter question on female semen had already been treated at ch. 5.5 (its repetition here shows that the pedantic A generally divides up what was originally kept together). The problem pointed out by Diels is that there is no evidence that the Stoa supported the view that females produce semen and that is contradicted not only at A 5.5.2, but also by other texts (D.L. 7.159, Cens. 5.4, cf. Diels *DG* 423; see also Lesky 1951, 171). The name-label must have been incorrectly attached (unless there was a minority viewpoint of which we are ignorant). Given the mention of *homoiomereiai* (on which see below, section D(d)§3), it is possible that the theory was intended to represent that of Anaxagoras. This is consistent with Censorinus' report, but not with A 5.7.4 and Aristotle in *GA* 4.1. However, it should also be noted that the theory bears some resemblance to the second of theories that Aristotle criticizes, at 4.3 769a28. Admittedly, the key term *πανσπερμία* is not found in A. But the general thrust of the theory is similar and the image of the artist in A seems like a developed version of Aristotle's 'juice-mixer'. The Stoic name-label may have been attached because someone recognized an affinity with the theory of *spermatikoi logoi* (see below, section D(d)§3 on Psellus' adaptation).

The three doxai thus represent a diaeresis of three distinctive views: predominance of seminal heat, right and left parts of the womb, predominance of pan-genetic spermatic characteristics. But there is little attempt, it would seem, to achieve consistency with the earlier question of the origin of sex differentiation treated in ch. 5.7.

In addition, the composition of the chapter is rather uneven. The first doxa explains both similarity and dissimilarity (thus anticipating the next chap-

ter 5.12), but in general terms. The next doxa and the second half of the final doxa explain resemblance to the father and the mother as distinct from the parents in general. This aspect of the topic is not announced in the chapter's heading.

d Further Comments

Individual Points

§2 Mansfeld (2015e) = (2018a) 193–194 argues that the text on Parmenides may be lacunose. The description of the role played by the womb requires further explanation (194): 'I take it that, analogous to what is at issue in 5.7.4, what is produced by the right parts must be deposited in the right side of the womb to result in resemblance to male ancestors, and what is produced by the left parts must be deposited in the left side of the womb to result in resemblance to female ancestors.' He also rightly points out that G's term σπέρμα is more accurate than γόνος in P^B, and G's plural τῶν δεξιῶν μερῶν coheres better with A 5.7.4 and indeed with Parmenides' own words in fr. 28B17 DK (cited in A 5.7 section E(b)§1). But G retains the singular for the left part and we hesitate to emend the text so drastically.

§3 The reading τὰς ὁμοιομερείας in G is supported by Q. As a quite unexpected reading, not directly provoked by the context, it is almost certainly genuine. The term is also used in an Empedoclean doxa on the flavours of fruits in 5.26.4. In contrast the reading of P^B, τὰς ὁμοιότητας, is problematic. Mau and Lachenaud take over Von Arnim's emendation τῆς ὁμοιότητας, but it is clear that a subject is needed for the verb ἀναπλάττεσθαι.

Lesky (1951) 173 in her comment on Psellus is unaware that he is directly dependent on P for his information. She suspects that the Stoicizing tenor of the opening words of his chapter, and particularly the phrase λόγους ... τῶν ἐν αὐτῷ ἡθῶν καὶ τρόπων καὶ τῆς μορφῆς referring to the inherited characteristics of the offspring, come from A or his source. In fact they are more likely due to the intervention of Psellus himself, who, taking his cue from the name-label, introduces the terminology from his own knowledge of Greek philosophy.

Of considerable interest is the passage in a Viennese papyrus that most likely goes back to Origen's *Commentary on Genesis*. The text is best accessible at Metzler (2010) 184–186; see below, section E(b)§3. The theory of ἐπικράτεια, utilised in both §1 and §3 is here applied without any further details and no name-label. *Pace* Metzler (2010) 184 n. 255 it cannot be regarded as Stoic for the reasons stated above. Its use in this context suggests that this simplified view had become generally accepted by the third century CE.

e Other Evidence

It is clear that the diaeresis of three views in A resembles the parallel passage in Censorinus, although the Latin author is more fluent in linking up the doxai. The two texts share two out of three views. The doxa of Empedocles in Censorinus is the same as in P's §1, but he develops the various permutations much more elaborately and specifies that the resemblance relates to the face. The Parmenidean doxa is the same in both sources. Censorinus also includes a doxa of Anaxagoras which is missing in P, while the Stoic view is absent in the Latin author. The Anaxagorean doxa does show some resemblance to the second part of the Stoic view, but here too the important detail of the face is lacking in P. It is likely that both authors are likely to be incomplete in relation to their source. If we leave Aristotle aside, no other ancient texts give multiple views on this subject.

Commentary

A *Witnesses*

All three main witnesses record three doxai. Despite the doubts of scholars, to be discussed below, the three lemmata should be retained and the third doxa should not be broken into two. See further the discussion below at D(c). Ps appends a brief reference to the second lemma to his chapter combining the questions of chs. 5.11 and 5.12.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The chapter's subject, which continues from the previous chapter, is not separately treated in any of the witnesses to the proximate tradition, including Censorinus and Lucretius.

(2) *Sources.* The subject of the dissimilarity of children in relation to their parents and other ancestors is separately noted by Aristotle as part of his discussion in *GA* 4.3. He mentions it three times as part of a continuum of similarity/dissimilarity, first to father and mother, then to other progenitors, then to human beings in general, and ending with the case of monstrous births that involve non-human features (texts below section E(b) General texts). In the doxographical section at 769a7–b3 the question of dissimilarity is also briefly mentioned in the report on the first kind of explanation (attributed to 'some of the physiologi') with the additional comment that the reason given is uncon-

vincing (769a13 οὐδετέρῳ γίγνεσθαι ὅμοιον). However, none of the doxai found in A can be linked back to Aristotle's discussion. The author of the Hippocratic treatise *Genit.* in the passage cited on ch. 5.11 on similarities to parents argues that it is not possible for a child not to look like either of its parents in all its features.

C Chapter Heading

In contrast to the chapter heading of the twin chapter 5.11, A reverts to the formulation with πῶς + the verb γίγνομαι, which he also used in chs. 5.6–8 & 10. For the sake of brevity the heading also omits the reference to 'the ancestors'.

On the chapter headings in S^L see above, ch. 5.4 Commentary C. The heading for this chapter is almost identical to that found in the tradition of P, but there are no positive grounds for thinking it is interpolated from there.

D Analysis

a Context

The chapter forms a pair with ch. 5.11, with the present chapter focusing on dissimilarity from rather than similarity to parents. As noted above, Aristotle studies both aspects within the single chapter (as does Psellus). In the opening doxa of ch. 5.11 (Empedocles) too, both similarities and dissimilarities are explained. But A has decided to split the subject up into two twin chapters, which at least as far as their chapter headings are concerned, form a neat contrasting pair.

b Number–Order of Lemmata

Given the lack of parallels in the doxographical literature, it is perhaps unlikely that the chapter had more than the three doxai preserved in the tradition of P. On the other hand, Aristotle's doxographical section at *GA* 4.3 769a7–b3 hints at earlier discussions which might have provided additional material that has gone lost.

c Rationale–Structure of Chapter

The chapter falls into two sections, which form a kind of diaeresis.

(1) The first doxa, attributed to 'the majority of the doctors', gives a general physiological explanation involving the cooling of both the male and female semen, so that (we presume) the offspring resemble neither of the parents. The theory of the causality of heat and cold in sex determination is attributed to Empedocles and Parmenides in A 5.7.1–2, but this is in a protological context (cf. Aristotle *GA* 4.1 764a1–7). In addition heat is invoked to explain Empedocles' views on similarity *and* dissimilarity to forebears in 5.11.1. The attribution here most likely refers to the Hellenistic doctors, starting with Diocles (who is labelled ὁ ἱατρὸς in 5.9.1).

The introduction of the name-label with the particle μέν would appear to introduce a contrast with other views. But no δέ follows (none of the witnesses record it). The remaining doxai adopt a quite different approach.

(2) The remaining two doxai give as explanation various psychological factors involving thought processes. The view attributed to Empedocles (§2) differs *tout court* from the explanation given in A 5.11.1. It invokes the role of the φαντασία on the part of the woman when she conceived, as illustrated by popular tales such as the story of the Cyprian king mentioned by Soranus in his *Gynaecia*; see Gourevich (1987) and other references in the learned note at Lachenaud ad loc. (texts cited below section E(b)§2).

The final part of the chapter is difficult. Diels determined that the third lemma as found in the witnesses could not be accepted as it stands. For the Stoics an explanation in terms of a ‘fellow-feeling of the mind’ is not totally implausible, though it cannot be confirmed by any other texts (and the term συμπάθεια is usually used in a cosmological context). But the remainder of the lemma uses a wholly different atomistic terminology, which can hardly be attributed to the Stoics. He suggested ad loc. that this last section is better attributed to ‘Empedocles or the Democriteans’ and pointed out terminological resemblances with A 4.13.1 and 4.14.1. Von Arnim includes only the doxa up to the word διανοίας in his collection of Stoic fragments (*SVF* 2.753).

What Diels and his followers failed to observe is that the terminology of the entire passage so closely resembles what we find in Epicurus’ account of the process of vision in the *Epistula ad Herodotum* that it must be suspected that this is what the doxa is at least partly based upon (for further use of material from his letters see chs. 1.20.2, 2.7.3, Commentary ad loc. and the discussion at Runia 2018, 395). In the following extract, D.L. 10.48–50, the parallel terms are printed in bold (for reasons that will become clear we have added a term from the previous doxa as well):

πρός τε τούτοις ὅτι ἡ γένεσις τῶν εἰδώλων ἅμα νοήματι συμβαίνει· καὶ γὰρ
 ῥεῦσις ἀπὸ τῶν σωμάτων τοῦ ἐπιπολῆς συνεχῆς ... οὐθὲν γὰρ τούτων ἀντιμαρ-
 τυρεῖται ταῖς αἰσθήσεσιν, ἃν βλέπη τις τίνα τρόπον τὰς ἐναργείας, τίνα καὶ τὰς
 συμπαθείας ἀπὸ τῶν ἔξωθεν πρὸς ἡμᾶς ἀνοίσει. (49) δεῖ δὲ καὶ νομίζειν ἐπει-
 σιόντος τινὸς ἀπὸ τῶν ἔξωθεν τὰς μορφὰς ὁρᾶν ἡμᾶς καὶ διανοεῖσθαι· οὐ γὰρ
 ἂν ἐναποσφραγίσαιτο τὰ ἔξω τὴν ἐαυτῶν φύσιν τοῦ τε χρώματος καὶ τῆς μορ-
 φῆς διὰ τοῦ ἀέρος τοῦ μεταξὺ ἡμῶν τε καὶ κείνων, οὐδὲ διὰ τῶν ἀκτίνων ἢ ὧν
 δῆποτε ῥευμάτων ἀφ’ ἡμῶν πρὸς ἐκεῖνα παραγινομένων, οὕτως ὡς τύπων τινῶν
 ἐπεισιόντων ἡμῖν ἀπὸ τῶν πραγμάτων ὁμοχρόων τε καὶ ὁμοιομόρφων κατὰ τὸ
 ἐναρμόττον μέγεθος εἰς τὴν ὄψιν ἢ τὴν διάνοιαν, ὡκέως ταῖς φοραῖς χρωμένων,
 (50) εἶτα διὰ ταύτην τὴν αἰτίαν τοῦ ἐνὸς καὶ συνεχοῦς τὴν φαντασίαν ἀποδι-

δόντων καὶ τὴν συμπάθειαν ἀπὸ τοῦ ὑποκειμένου σφζόντων κατὰ τὸν ἐκεῖθεν σύμμετρον ἐπερειασμὸν ἐκ τῆς κατὰ βάθος ἐν τῷ στερεμνίῳ τῶν ἀτόμων πάλλσεως. καὶ ἦν ἂν λάβωμεν φαντασίαν ἐπιβλητικῶς τῇ διανοίᾳ ἢ τοῖς αἰσθητηρίοις εἴτε μορφῆς εἴτε συμβεβηκότων, μορφὴ ἐστὶν αὕτη τοῦ στερεμνίου, γινομένη κατὰ τὸ ἐξῆς πύκνωμα ἢ ἐγκατάλειμμα τοῦ εἰδώλου ...

The only term that is not found is *εἴσκρισις*, a terminological innovation first recorded in Philo and also found in the doxa on vision at A 4.13.1. Admittedly two of the terms—*ἄκτινες* and *ρεύματα*—are used negatively to refer to other theories, but that will not have stopped the doxographer from amplifying the epistemological breadth of his account (there was nothing to gain from limiting the kinds of particle stream; for *ρεύμα* see D.L. 10.53 on hearing). Especially interesting is the use of *συμπάθεια* in this context, indicating the co-affection between the object and the perceiving mind. The epistemology, with its ‘physical’ connection between the object of contemplation and the perceiver suits the context perfectly (note that in the example in Soranus the woman is actually compelled to look at the beautiful images). Note also that the concept of the ‘impression’ (*φαντασία*), which is the only philosophical term in the Empedoclean doxa, also occurs in the Epicurean passage above.

There can be little doubt, therefore, that the terminology of all but the first doxa has atomist antecedents. Moreover there is no need to divide the final doxa into two parts. The name-label *οἱ Στωικοί* is likely to be a mistake, perhaps because it was thought that the term *συμπαθεία* was specifically Stoic (it occurs elsewhere in A only ch. 1.18 in a problematic text from Aristotle on the Pythagoreans that most likely derives from AD). The mistake is more likely to have been made by A than P. This means that we should preserve the name-label in the text. There is also no need to postulate a lacuna, as done by all the editors since Diels. As for the original name-label(s), with the parallels at A 4.13.1, 5.5.1, 5.16.2 and 5.20.2 in mind, we consider *Δημόκριτος Ἐπίκουρος* the most likely candidates.

The final two doxai thus form a pair, with the second introducing a philosophical doctrine which explains as it were the possibility envisaged in the Empedocles doctrine. The diaeresis thus covers the two views of a chance result with a physiological basis and one that has an epistemological background. The parallels with the doxa at A 4.13.1 are instructive (but see the Commentary ad loc. on the difficulties of the text), revealing an interesting alignment between the account of vision in Book 4 and an instance in Book 5 where an account of vision must be presumed.

d Further Comments

Individual Points

§1 The formula οἱ πλείστοι plus genitive for a name-label is found elsewhere only at A 2.25.4 (Posidonius and the majority of the Stoics).

§3 There seems no reason why A should distinguish between streams and rays on the one hand and *eidola* on the other, especially when the latter term is the key one for atomist epistemology. We therefore follow Diels in emending the passage. His conjecture ἡ καὶ is very suitable, because it implies that the second alternative is climactic (cf. Denniston 1954, 306).

e Other Evidence

As noted above in section B, there seem to be no parallels for a separate treatment of the dissimilarity of progeny to their parents, in contrast to the way that Aristotle and also the author of the Hippocratic *Genit.* (followed by Galen) integrate this possibility into the full discussion of the topic. Given the general interest of the theme, it is not so surprising that the doxographer includes a more ‘folksy’ element.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A Witnesses

The tradition of P preserves three quite substantial doxai, which are considerably altered and reduced by G. The papyrus has only a snippet, which does

include the name-label of the first doxa. S preserves only the chapter heading, on which see section C below. Ps utilized the parallel chapter 5.9 and passes this chapter by.

B Proximate Tradition and Sources

(1) *Proximate tradition.* In contrast to the parallel chapter 5.9 this chapter specifically addresses the infertility of both women and men. As noted at Commentary B on that chapter, various sources, both proximate and more distant, address this topic. The main one belonging to the proximate tradition, ps.Galen *Def.Med.* 442, divides the subject into two, dealing (unusually) first with the causes of women's sterility, followed by those in the case of the men. Lucretius in a poetically rich passage at *DRN* 4.1233–1262 selects only a single reason, namely that the man's semen is either too thin or too thick (cf. Hippo's theory on semen at 5.7.3, *Cens.* 6.4).

(2) *Sources.* In two cases, Aristotle in *HA* 10 and the late sixth cent. author Aëtius of Amida, the topic is divided into three, with also the interaction between male and female being proffered as a cause. As we shall see below, this is relevant for the structure of the present chapter. For the various texts see section E(a)&(b) below.

Ch. 26 of Aëtius of Amida's Book 16 on gynaecology gives a long account of the causes of ἀσυλληψία (for the term cf. the heading of ch. 5.6). The method of presentation shows some similarities with A, esp. in the lengthy listing of causes using either infinitival or prepositional phrases. But the passage does not possess any doxographical aspects at all, as is also the case for the text in ps.Galen *Def.Med.* Indeed, remarkably, the text in A is the only doxography with named proponents on the subject that we have been able to locate.

C Chapter Heading

The chapter heading beginning with πῶς continues the sequence of chapters seeking the cause. See our Commentary above on chs. 5.2 and 5.6. In the index of the Laurentianus ms. of S, however, we find the alternative heading Περί στειρῶν γυναικῶν καὶ ἀνδρῶν, i.e. using the umbrella type Περί x which is the most common in A. The change of the heading is certainly the work of S, who uses chapter headings with Περί almost exclusively in Book 1 of the *Eclogae*. It is thus not interpolated from P and it was a mistake on the part of Wachsmuth to leave this chapter heading out in ch. 1.42 of his edition of that book (as he also did in the case of ch. 5.9).

D *Analysis*

a Context

The chapter follows on from chs. 6–8, 10–12, which have discussed various themes related to conception. It and the following chapter on the sterility of mules now discuss the problem of when conception does not take place. The exception in this logical sequence is ch. 9, which virtually doubles up on the present chapter and seems misplaced. See the discussion further below under section D(c).

b Number–Order of Lemmata

The three lemmata with their ordered sequence give an impression of completeness. But in the absence of doxographical parallels, and taking into account that many other causes are given in other sources (e.g. Aëtius of Amida), we cannot be certain that there were not further doxai.

c Rationale–Structure of Chapter

The three doxai are presented in an ordered sequence.

(1) First the causes of female sterility are given. These concentrate on the role of the womb. As in A 5.9.1 a long sequence of possible causes are given, nine in total, but all related one way or another to the condition of the womb. (On the conjecture μικροφυῖαν, to be preferred to the mss. μικροθυμίαν see section D(d)§1.) The doxa is thus parallel to A 5.9.3, but there only four causes are given (tumors, fleshy growths, being lighter or smaller than usual). All of these four more or less recur in this chapter (tumors are not wholly the same as caluses). The fact that A 5.9.3 is attributed to Erasistratus makes it likely that the name-label here, οἱ ἱατροί, at the very least includes the eminent Alexandrian doctor. The same must also be concluded for A 5.8.3, where the aetiology of a twisted womb recalls the final two causes in the present doxa. See further Runia (1999a) 223 = M–R 3.548.

It is surprising that among the plethora of causes the heat or cold of the womb is not listed. This is one of the chief causes in other texts (ps.Galen, *Corpus Hippocraticum*, Aëtius of Amida), though not in Aristotle. It is, however, mentioned in the parallel doxa at A 5.9.1 if our interpretation of that passage is correct; see Commentary D(c).

(2) Next a list of six causes of male infertility is linked to the name-label of Diocles. These focus on the role of seed and the male member, but also on a mismatch of the male parts in relation to the womb. As discussed in our Commentary on ch. 5.9, the parallelism of this doxa with 5.9.1 & 2 taken together is unmistakable; see the parallel columns with the two texts presented there. The key difference is that in ch. 5.9 the report is split in two and assigned two

name-labels (Diocles, the Stoics). The first half enumerates female factors causing conception to be impeded, the second half male factors doing the same. In A 5.13.2 these are brought together and assigned to Diocles. Because this doxa assumes that females also have semen (cf. ch. 5.5), it is possible to convert the female factors in A 5.9.2 into male factors in 5.13.2 with very little change. Either A (or more likely his source) made the two reports deliberately parallel, or he (or the source) adapted the report for one sex so that it would work for the other.

(3) The third doxa, assigned to the Stoics, now brings the female and male factors together and denotes their *incompatibility* as the cause. The factors themselves are described in vague terms ('powers and qualities'). A look at parallel texts tells us why. Both Aristotle and Aëtius of Amida in the opening lines of their discussion mention that the cause can be due to *both* the partners (HA 633b12, *Iatr.* 16.29; texts below section E(b) General texts). One does not have to investigate the causes in detail: if there is a lack of *συμμετρία* or *συμφωνία*, the men should take a different partner and if a child is conceived, the problem is solved! The thought is the same in A, although the terminology is a little different (on *ἀσυμφύλους* see further below section D(d) on §3).

The chapter thus exhibits the simplest of diaereses: sterility through female causes, through male causes, and through the incompatibility of male and female together. The scheme is an obvious one. It goes back to Aristotle, and it is also found as late at Aëtius of Amida in the sixth century. Because there is such a widely recognized multiplicity of causes (noted already by Aristotle at 746b21), it makes little sense to attribute their discovery or outline to a particular philosopher or physician. This is no doubt why no parallel doxographies with name-labels (even anonymi) can be found. But A does assign name-labels. The comparison with ch. 5.9, and particularly the different doxai attributed to the Stoics in A 5.9.2 and 5.13.3, demonstrates that these are quite likely arbitrary and certainly cannot be regarded as trustworthy. See further our discussion above on ch. 5.13 and Runia (1999a) 222–224 = M–R 3.547–549.

d Further Comments

Individual Points

§1 In the long list of causes the one named *παρὰ μικροθυμίαν* in the mss. rouses suspicion. It appears to introduce a psychological component, which in itself is perfectly reasonable for the subject of the chapter but does not unlike the others relate well to the womb. Amazingly, the term *μικροθυμία* is a *hapax legomenon* in the whole of Greek literature. In light of Q's translation *infolge der Kleinheit ihres Umfang* Daiber ad loc. plausibly suggested *σμικροτήτα*, adducing the use of the same term for the womb of mules in A 5.14.2. However, paleo-

graphically this is not so likely. The brilliant conjecture of Kronenberg (1941) 41, μικροφυῖαν, appears to solve the problem. This word is also rare, but at least it occurs elsewhere, e.g. at Strabo 17.2.1 on pygmies, and is paleographically much more convincing. We have accordingly introduced it in into our text.

§2 For G's δι' ἀτονίαν τῶν ἀνδρῶν we might compare exactly the same phrase in the final words of A 5.6.1, on which see the note ad loc. at Commentary D(d) §1[6]. It should be noted that P's ἀγόνους τοὺς ἀνδρας, which occupies the same place as G's δι' ἀτονίαν τῶν ἀνδρῶν, echoes the ἄγονοι οἱ ἄνδρες of the chapter heading. It is possible that in G is these words have been epitomized away and that his δι' ἀτονίαν τῶν ἀνδρῶν may have reflect a richer version of P, and so go back to A (and to the Diocles fragment, *pace* Van der Eijk 2000–2001, 2.97, who suggests that G may have originally read δι' ἀγονίαν).

As noted by Van der Eijk (2000–2001) 2.97, the concept of ἀσυμμετρία (disproportion) as a cause of infertility is already found in Aristotle *HA* 10.4 636b9, *GA* 1.18 723a30, 4.2 767a23, 4.4 772a17.

§3 The infinitives postulated by Diels for the final sentence are unnecessary. A quite often changes from *oratio obliqua* to *oratio recta* for no apparent reason.

The term ἀσύμφυλος is quite uncommon and in the light of the parallel at Aëtius of Amida 16.29.38 (ἀσυμφώνως ... διακείμενοι) one might consider changing ἀσυμφύλους to ἀσυμφώνους. But the term is picked up by ὁμοφύλοις a few lines later, and so must be retained.

e Other Evidence

Ps.Galen's treatment in *Def.Med.* 442 is very brief. But we should note the recognition of multiple causes (πλεοναχῶς), which is such an obvious feature of A's treatment (and also in Aëtius of Amida's lengthy and detailed account). Similarly the parallelism which he sees between women and men (περὶ μὲν ... περὶ δέ) recalls to mind the parallelism which occurs in A in ch. 5.9 (even though the chapter is ostensibly about failure to conceive in women only) and ch. 5.13.

Commentary

A *Witnesses*

Three doxai are preserved in all the witnesses to the P tradition. S only preserves the heading, so he must have included it as a (now lost) sub-section of *Ecl.* 1.42.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* There are no texts in the proximate tradition that shed light on this chapter. On the dialectical account in Aristotle *GA* 2.8 see below.

(2) *Sources.* The lack of evidence leaves us guessing as to whence the *Placita* derived the views recorded in this chapter. But it is worth noting that the name-labels represented in the chapter are also common elsewhere in Book 5 (Alcmaeon 6 doxai, Empedocles 17, Diocles 6). It is likely, as we shall see, that the discussion on the infertility of mules was included as a kind of appendix to or illustration of the discussion on human fertility and its problems. In this instance, too, it would appear that Aristotle led the way, even though his discussion has not left any direct trace in this chapter. Of course the coverage of his treatment in the two works *HA* and *GA* is much broader and they contain detailed discussions of a wide range of examples from the animal world. However, it can be seen in the way he introduces his discussion of mules at *GA* 2.7–8 747a22–26 (text below section E(b) General texts), that the relevance to the study of human beings is at the forefront. This account at *GA* 2.8 747a26–b27 has a quite a long dialectical passage criticizing the views of Empedocles and Democritus. The details of this account do not reappear in the passage in A.

The emphasis on *human* physiology has been strengthened in the *Placita* so that it becomes completely dominant, although some traces of an originally broader approach remain. See further our comments at section D(a) and in the Introduction to Book 5, section 4. The problem is also raised in ps.Alexander *Probl.Iatr.* 1.137, but as is usual in that work, there is no doxography.

C Chapter Heading

As in ch. 5.9, but unlike in 5.13, the chapter heading seeks the cause by using the prepositional formula διὰ τῆ, which is comparatively infrequent in A (see comment at 5.9 Commentary C). The same formula is used by ps.Alexander and by Philoponus when commenting on Aristotle's account (texts below). The preposition διὰ also recurs in §2 and §3. The adjective is taken over from the chapter heading of ch. 5.13. It should be noted that the heading speaks of αἱ ἡμίονοι, i.e. female mules. This continues the prioritising of female infertility that is found in both 5.9 and 5.13. But in the first doxa (Alcmaeon) separate answers are given first for males, then for females. The second doxa follows the formulation of chapter heading by giving an answer which only discusses the infertility of female mules and by using a prepositional phrase with διὰ.

The heading in S^L is identical to that found in the tradition of P (cf. Wachsmuth 1882, 17). On the chapter headings in S^L see above, ch. 5.4 Commentary C.

D Analysis

a Context

The chapter follows on from the (misplaced) ch. 5.9 and more directly from ch. 5.13, to which it is appended (and to the subject of which it refers back in its final words). In Book 5 A almost exclusively discusses physiological subjects as they relate to human beings. This chapter is an exception, as are the chapters on living beings in general (chs. 5.19–20). In the rest of the book there are very limited references to living beings other than humans (mention of ἄλογα ζῷα at A 5.10.3; 5.21.2; ζῷα in general at A 5.21 (heading), 5.27.1; plants at A 5.26). See further our comments below at section D(d).

b Number–Order of Lemmata

The three lemmata amount to only two separate answers to the question, since the third lemma attributed to Diocles is merely a further comment on the second view of Empedocles. Given the irregular structure of the present chapter (on which see the following sub-section) and the absence of the views of Democritus, Empedocles (!) and Aristotle recorded elsewhere (and also the cause given by ps.Alexander), the odds are that it originally contained rather more material than what now remains.

c Rationale–Structure of Chapter

As already noted above, Alcmaeon's doxa does not follow on very well from the chapter heading because it commences with the cause of male mule sterility, whereas the heading mentions only female mules. Just as in ch. 5.13 but in reverse order, the cause for the males focuses on the role of semen (on which Alcmaeon has a recorded view in A 5.3.3), while for the females the state of the womb is the key to their sterility. It is clear from other doxai in A (cf. also chs. 5.17.3, 5.24.1, 5.30.1) and reports elsewhere that Alcmaeon showed an interest in biological and embryological questions (which does not necessarily make him a 'doctor' (ἰατρός); in the tradition he is primarily presented as a φυσικός, cf. D.L. 8.83, Lloyd 1975, Mansfeld 1975). The report includes two archaic terms and the explicit attestation of the authenticity of the second gives it an authentic ring (the doxa is promoted to a B fragment in DK); see the comment at M–R 2.1.214. The verb ἀναχάσκειν is used three times of the womb in the *Corpus Hippocraticum* (*Vict.* 1.30 on twins, *Superfet.* 32.1, 8 for turning it, cf. §2). For another text in which A points out the authenticity of unusual terminology see 3.3.11 (Democritus on thunder). As Diels-Kranz point out in a note on 24B3, the lightness and coolness of semen is mentioned by Aristotle *GA* 2.7 747a2 as the cause of infertility in 'effeminate men'.

The second doxa attributed to Empedocles reverts to an exclusive focus on female mules in line with the chapter heading. The cause relating to the size and shape and position of the womb is clear enough, with some overlapping with the causes given for female infertility in A 5.9.1. But because the doxa differs wholly from the (rather obscure) report on Empedocles' view given at *GA* 2.7 747a34 involving the mixture of semen, most scholars have concluded that the name-label is wrong (e.g. Diels *VS* 176; DK 1.301; Guthrie 1962–1981, 1.217), although Bollack (1965–1969) 3.570 sees no problem and Van der Eijk (2000–2001) 2.43–44 cautiously notes that Empedocles may well have offered several alternative views which have been separately recorded in the two authors.

The third doxa is meant primarily to reinforce the previous view by giving what appears to be a verbatim quote from a work by Diocles (note that it is the only text in A where the formula of μαρτυρεῖν ('attest', 'quote') is used; see further the discussion at M–R 2.1.215). It is perhaps not impossible that ἐν ταῖς ἀνατομαῖς refers to the title of a work on dissection, as Wellmann (1901) 127–130 thought, but it is much more likely to indicate the dissections that Diocles himself carried out; see the discussion by Van der Eijk (2000–2001) 45. He himself proposes that Diocles' Γυναικεῖα could also have been the source, as suggested by the final section of the doxa. For this remark A reverts to indirect speech, thereby effectuating the return to normal doxographical language used to summarize views (ἐνδέχεται is the usual term for multiple possible causes; see esp.

A 3.15.11 on the view of multiple explanations of earthquakes attributed to Epicurus). The remark offers a connection to the earlier discussion of female sterility in chs. 5.9 and 5.13. It may hint at the fact that the main interest of the subject of mules' sterility is the light that it might shine on human female infertility (as in Aristotle and Galen). It reinforces the emphasis on human physiology which is a main feature of Book 5.

In the medical author Rufus of Ephesus (a contemporary of A) we find the following statement which explains that there are three synonyms for semen: *Onom.* 225 Daremberg–Ruelle σπέρμα δὲ καὶ θορὴ καὶ γόνος τὸ αὐτὸ, ἢ ἐν παραστάταις γεννητικὴ πέψις ὁμοῦ πνεύματος καὶ τροφῆς.

From the formal point of view the chapter differs from its predecessors chs. 5.9 and 5.13 in two ways. It does not pile up alternative causes connected with ἢ (or), which is such a pronounced feature of the previous chapters. Possible separate causes are presented as working together (thinness and coolness of the semen, smallness and lowliness and narrowness of the womb). It might be thought that this would make it easier to present clear diaereses. But this does not happen. There is no clear contrast between the first and the second doxa. As we have seen, the former is divided into separate views for males and females, the latter gives a cause for females only. The two views on the role of the womb are not very different, but are also not linked. One cannot escape the impression that this chapter was most likely mutilated at some point in its transmission.

d Further Comments

Individual Points

§1 A key feature of the Alcmaeon doxa, as noted above in section D(c), is that it contains two archaic terms that presumably go back to his original treatise. For both terms P^B (but not G and Q) has included explanatory phrases beginning with ὃ ἐστὶ, i.e. ὃ ἐστὶ σπέρματος for θορῆς and ὃ ἐστὶ ἀναστομοῦσθαι for ἀναχάσκειν. Diels regarding these parenthetical remarks as glosses, but this is by no means a necessary conclusion. Explanatory comments belong to A's method; see for example ch. 3.5a(olim 18)[6], where the mss. are divided between ὅτι and ὃ. Other places where the formula ὃ ἐστὶ is used for explanatory additions occur at A 1.11.2 (τὸ ποιοῦν, ὃ ἐστὶ νοῦς), A 1.13.1 (ὁμοιομερῆ, ὃ ἐστὶ στρογγύλα). The phrase here does not occur in S, so could be an addition by P, but given the erudition required, this is not so likely. The phrases should thus be retained in the text; see further ch. 1.11 Commentary D(d) on §2.

§3 Diocles' words preserved in *oratio recta* are rendered in *oratio obliqua* in both G and Q. This might suggest that a conversion to direct speech has occurred at some time in the transmission of P. Van der Eijk (2000–2001) 2.44

entertains this possibility but argues against it, noting the infrequency of direct speech in A. It is indeed the *lectio difficilior* and should be retained.

Commentary

A *Witnesses*

P^B and Q record five doxai, each with a separate name-label. In G all five doxai can be discerned, but there are only four name-labels because the second and third doxai in P have been coalesced into a single lemma as the result of a *saut du même au même*. Ps joins up the chapter heading with that of 5.16. He does not utilize the contents of this chapter, though making interesting comments on its subject matter. S unfortunately records only the chapter heading. Not even the Platonic lemma was preserved by his Byzantine epitomators.

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. Two interesting texts in Clement (*Strom.* 5.1.5 and 8.9.6–9, 13.2–8, cited below) and a further text in the Scholia to a rhetorical work of Hermogenes (476.2–7 Waltz, cited below) show that the nature of the embryo was a standard quaestio for both natural scientists and doctors giving rise to interesting dialectical and philosophical topics. See the discussion at Mansfeld (1990a) 3186–3187 which focuses on the text in Clement *Strom.* Book 8, and Havrda's commentary (2016) ad loc. The latter scholar argues that this book is a series of excerpts on logic that Clement took from a contemporary work, perhaps Galen's treatise *Περὶ ἀποδείξεως* (now lost). The topic was linked to the parallel question regarding the status of plants (cf. ch. 5.26) and illustrated interesting divergences between the Stoa and other schools. The work preserved under the name of Galen, *Εἰ ζῶον τὸ κατὰ γαστρός*, resembles a rhetorical exercise arguing a particular thesis, namely that the fetus is a living being. In addition the treatise *Ad Gaurum*, which though ascribed to Galen in the single surviving manuscript is now universally agreed to have been written by Porphyry, also indicates familiarity with the quaestio and expatiates on it in his *status quaestionis* in §§1–2. This work, however, has as its subject 'On how

embryos are ensouled', which indicates a different approach to the question compared with the chapter in A (this approach is also found in Tertullian *de An.* 25 and in Psellus *Omn. Doctr.* 59, *Phil. Min.* 1 op. 16); texts below section E(a) General texts.

By far the most interesting parallel for our purposes is found at ps.Galen *Def. Med.* 445. After first treating the question of the embryo's nourishment in §444 (the subject of the next chapter in A), it then gives a diaeresis of three opinions, the first two of which are presented anonymously. Firstly there is a diaphonia between those who say it is a ζῷον and those who say it is not. Arguments follow: in favour of the first view is that it moves and perceives; in favour of the second is that it is comparable to a tree or plant. Finally a third compromise view is ascribed to Asclepiades: it is neither a ζῷον nor not a ζῷον, but is to be compared to living beings who are asleep. The method and the content of this section are very similar to what we find in A and are clearly derived from the proximate doxographical tradition. Regrettably Censorinus does not touch on this question in his account of human reproduction. It is to be noted that Philo furnishes a parallel for §4 at *Somn.* 1.31, part of the section with questions on the heaven and the soul/mind that goes back to a version of the *Placita* earlier than A (see ch. 2.11 Commentary B).]

(2) *Sources.* There is little information about early Greek investigations on the subject of embryology apart from the evidence in the *Placita*. Earliest thinkers of whom we know that they developed theories on the subject are Parmenides (cf. A 5.7.2 and the discussion in Mansfeld 2015a, at Mansfeld 2018d, 192) and Alcmaeon (cf. Longrigg 1993, 55–56, 61). For the latter, apart from the references to him at A 5.16.3, 5.17.4, there is a comment at Aristotle *GA* 3.2 752b22–28 (= 24A15 DK) on the formation of the embryo in the eggs of birds. The Hippocratic treatise *De natura pueri* (which is a continuation of the treatise *De semine* and together with *De morbis* IV most likely formed a single work) discusses the early formation of the embryo and famously describes the incident of the singing girl whose induced miscarriage allowed the author to examine a very early fetus (ch. 2). When Aristotle mentions the subject at *GA* 2.3–4 (texts below section E(b) General texts) he makes no reference to previous thinkers. Importantly he links the question of the embryo being a ζῷον to the question of whether the embryo has a soul and concludes, with reference to his own treatment in *de An.*, that it only has the nutritive power of the soul and not yet the others, so that it is in fact only a ζῷον potentially. Additional questions can be discerned here, which will play an important role in the later philosophical tradition. If the embryo is not a ζῷον, when does it actually become so? The obvious answer will be: when it is born and first breathes. This answer plays an important role in A's chapter. But another question that can be asked is: when

does the soul descend into the body? The theme is especially important for Platonists and, as already noted above, gave rise to the treatise *ad Gaur*. But, as its presence in Tertullian indicates, it was also an important question for Christians. Psellus interestingly refers to three books on the subject, of Hippocrates (i.e. *Nat.puer.*), of Galen (i.e. *An.Ut.*) and of Porphyry (i.e. *ad Gaur.*).

It is significant that A does not include a chapter Πῶς ἐμψυχοῦται τὰ ἔμβρυα. The chapters on spermatology and embryology (5.3–18) scarcely contain any references to the soul (only at chs. 5.3.5, 5.4.1, 5.11.3—all on the source of semen). His approach is markedly physiological. Nevertheless the final three doxai might be seen to respond to a similar question, if ψυχή is replaced by πνεῦμα, i.e. Πῶς ἐμπνευματοῦται τὰ ζῶα vel sim.

For a brief history of the topic see Congourdeau (2007) and more general treatment in the collected essays of Brisson & *alii* (2008).

C Chapter Heading

The formula εἰ τὸ δεῖνα ζῶον is parallel to the similar εἰ τὸ δεῖνα σῶμα/ἄσώματος used at 4.3 (soul), 4.20 (voice) and 5.4 (semen). It invites a positive and a negative response, with a compromise view as a third possibility. The same formula is used of plants at ch. 5.26 in the second half of the heading, Πῶς ἡϋξήθη τὰ φυτὰ καὶ εἰ ζῶα; see further our Commentary ad loc., C. The question at the macro-level is implicit in a chapter on the cosmos, 2.3 Εἰ ἔμψυχος ὁ κόσμος καὶ προνοία διοικούμενος, but with the proviso regarding ensoulment that we noted in our remarks above under section B. Ps.Galen's treatise *An animal sit quod est in utero*, whose title uses the same formula, Εἰ ζῶον τὸ κατὰ γαστρός, starts off by drawing an analogy between the question whether the embryo is a ζῶον and the celebrated question of whether the same can be said of the cosmos. The chapter heading recorded in Marc. 521 is derived from ps.Galen *Def.Med.* and is not based on A; see further ch. 5.3 Commentary B.

The heading in S^L is identical to that found in the tradition of P (cf. Wachsmuth 1882, 17). On the chapter headings in S^L see above, ch. 5.4 Commentary C.

D Analysis

a Context

After having treated questions relating to conception, namely the various kinds of living beings produced (chs. 5.7–8, 10), resemblances between parents and progeny (chs. 5.11–12), and why conception sometimes cannot take place (chs. 5.9, 5.13–14), A now turns to the immediate product of conception, the fetus, and devotes the next four chapters to it, chs. 5.15–18, followed—after two chapters which interrupt the sequence—by ch. 5.21.

b Number–Order of Lemmata

With its five lemmata the chapter as preserved in P is reasonably extensive and, as we shall see, has a clear structure. Nevertheless, because as we shall see it does not contain a compromise viewpoint, which ps.Galen *Def.Med.* 445 in the proximate tradition does have, it is quite well possible that it has undergone a process of abridgement by P.

c Rationale–Structure of Chapter

The chapter opens with a direct opposition (diaphonia) between positive and negative responses to the question posed in the chapter heading. As noted above, this is invited by the formulation of the chapter heading in terms of a question starting with εἰ.

(1) Plato is credited with a positive response based on the fact that the embryo moves in the womb and is nourished and grows. The basis for the doxa is found in *Tim.* 91c–d (not 91a as in Mau's and Lachenaud's apparatus), where Plato speaks of ἀδιάπλαστα ζῶα in the womb which are nurtured (ἐκθρέψωνται) until birth. Plato thus explicitly mentions the aspect of nourishment, but not that of movement and growth. It is, however, a reasonable deduction (cf. also the discussion on plants at *Tim.* 77a–c, utilized by A at 5.26.1; see further below section D(d)§1).

(2) The opposite viewpoint is attributed to the Stoics, the only argument being the analogy with plants. The same position and analogy is found in ps.Galen *Def.med.* 445, but is much better argued (τρέφεσθαι and αὔξεσθαι, but no ὀρμή or προαίρεσις). The analogy with plants is standard for this viewpoint and found in many texts (see texts below). For the Stoa ψυχή is what makes something a ζῶον, whereas for a plant it is φύσις; cf. Galen *Hipp.Epid.* VI 5.5 273.2–3 Wenkebach (= *SVF* 2.715) cited by Gourinat (2008) 61. We should note that the Stoa is not cited as saying the embryo is a plant, but rather that it is *part* of the womb, i.e. part of a ζῶον; cf. *ibid.* 68.

The remaining three doxai, as Laks (2008) 186 has pointed out, follow on from the Stoic viewpoint (as is made clear at the beginning of the Empedocles doxa), but deepen it, going further than the plant analogy and attempting to answer how the transition from non-ζῶον to ζῶον takes place. All three focus on the aspect of respiration which has so far not been mentioned.

(3) For Empedocles the embryo does not possess this faculty. In the first part of the doxa the phrase ἄπνουν ὑπάρχειν ἐν τῇ γαστρὶ can be seen as nuancing the unsubtle μέρος τῆς γαστροῦς of the Stoic view. There can be little doubt that Diels was right in reading ἄπνουν with G rather than the ἔπνουν of P^{BQ}, which leads to an unacceptable contradiction with the words immediately following, πρῶτην δ' ἀναπνοὴν κτλ. More interesting is his bracketing of μή in the earlier μή εἶναι μὲν

ζῶον. This would make the doxa a compromise view, as we find in ps.Galen but with a different content. But this view would necessitate making a distinction between Empedocles' doxa and that of Herophilus, who says that embryos do not become ζῶα *until* they take their first breath. Such a distinction is difficult to see. Subsequent editors have rightly rejected Diels' emendation. The remainder of the doxa is almost word for word identical with the first part of A 4.22.1 on respiration, with the difference that the protological viewpoint of the earlier doxa is adapted to the physiological context in Book 5, as noted by Bollack (1965–1969) 3.438. It is difficult to understand why Diels *VS* 174 (repeated in at 31A74 DK) describes the text as 'schlechter' (compared with 4.22.1). It is in fact fuller in relation to the specific subject of the embryo.

(4) The next doxa attributed to Diogenes develops the progression by saying that the embryo is ἄψυχον, i.e. it does not possess ψυχή, but it does possess heat (on the reading see further comment below, section D(d)). This heat is no doubt instrumental for its growth and development. It has long been assumed that the Diogenes in question was Diogenes of Apollonia and the text is discussed at some length by Laks in his monograph on that thinker, (2008, first edn. 1983) 186–188. But Tieleman (1991) demonstrated that there are good grounds for supposing that the name-label refers to Diogenes of Babylonia, a Stoic who is cited as such in A 2.32.9 (this paper was unfortunately overlooked by Laks in the revision of his earlier work). Certainly there are no aspects of the doxa that are specifically reminiscent of Diogenes of Apollonia (e.g. a reference to air). It should be noted, however, that, although his name-label is not otherwise found in Book 5 until ch. 5.20.5, there is a clear reference to him on an embryological subject at Censorinus 9.2. An important part of Tieleman's argument is the collection of parallels on the emergence of ψυχή through the cooling (ψύξις) of air; cf. Philo *Somn.* 1.31, Plutarch *SR* 1052F and other texts at *SVF* 2.804–808 (some cited below section E(a)&(b)); see (1991) 112–114. This aspect of Stoic doctrine is passed over in both §2 and §5. Tieleman did not, however, take into account the passage in the Anonymus Londiniensis 18.15–23 which attributes a very similar doctrine to the Pythagorean Philolaus; on this text see Huffman (1993) 289–292, who regards it as authentic and among 'our most reliable evidence for this thought (292)' (but does not refer to the similar views of Diogenes). This parallel involving a thinker contemporary with Diogenes of Apollonia militates against Tieleman's thesis. Lonie (1981) 152 cites the same parallel in Philolaus, but also argues that 'Aetius might be wrong about Diogenes,' since the purposive and articulatory function of air is what one might expect in (the earlier) Diogenes.

(5) The last doxa attributed to the physician Herophilus returns to the aspect of movement introduced in the first lemma. It deepens the analysis by distinguishing between physical movement, which the fetus clearly possesses (and is

caused by the νεῦρα, tendons), and the movement of an independent ζῶον, for which respiration of the external air is required. It thus amounts to a subtle correction and reformulation of the Platonic position in the first doxa. The opening words of the lemma, 'Ἡρόφιλος κίνησιν ἀπολείπει φυσικὴν τοῖς ἐμβρύοις, οὐ πνευματικὴν, are rather similar to the beginning of the doxa on respiration attributed to the doctor in A 4.22.3, 'Ἡρόφιλος δυνάμεις ἀπολείπει περὶ τὰ σώματα τὰς κινητικὰς ἐν νεύροις ἐν ἀρτηρίαις ἐν μυσί. We recall that there is also a case of reduplication between the two chapters in the case of Empedocles (see above on §3). It is not unlikely that in these two cases A or a predecessor chopped up longer accounts of the psychology and embryology of the two thinkers, adapting the material to the exigencies of the doxographical method.

It may be concluded, therefore, that the chapter has a clear structure, consisting of a diaphonia between the first two doxai, with the remaining three doxai deepening the understanding of the negative answer, but also implicitly answering the question of how the embryo, if it is not a ζῶον, becomes such at the time of birth.

As noted, this structure is introduced by the chapter heading εἰ τὸ ἐμβρυον ζῶον, which invites a positive and a negative answer. But comparison with two similar chapters, 2.3 on whether the cosmos is ensouled and 5.26 on whether plants are ζῶα is revealing, because in both cases A makes very clear that there are compromise answers possible. Such a view is missing in the chapter as we have it, even though it would not be hard to devise and also appears in the proximate tradition (ps.Galen).

d Further Comments *Individual Points*

§1 This viewpoint is not the one defended by the Platonist Porphyry in the treatise *Ad Gaurum*, who argues that for Plato the embryo is not (yet) a ζῶον. He cites the texts *Tim.* 77a–c at §4.4 and 91d at §8.3, but draws different conclusions from them. The argument turns on the meaning of the term ζῶον (4.5): 'For if, on the one hand, someone wishes to call it a ζῶον by reason of its being alive (ζῆν), we shall agree; but we are positive that there is no way that Plato himself agrees that it has the self-moving soul that it has when it is born, rather he thinks it is a ζῶον in the sense that plants are.' (trans. Wilberding)

G adds the words καὶ αὖξεσθαι to the end of the doxa as it appears in P^B and Q. The addition makes perfect sense and may be regarded as one of those cases where G's evidence reveals material originally present in P and thus A. It is confirmed by A 5.27.1 (Empedocles) and esp. ps.Galen *Def.Med.* 445; further support from Arist. *EN* 1.13 1102a.32–b1, Aspasius in *EN* 35.8–9, ps.Gal. *ad Gaur.* 16.3.

§4 In his article on this lemma Tieleman does not consider Diels' emendation ἐνθερμα δέ (probably supported by Q) for ἐν θερμασίᾳ δέ in P^B, which we have taken over in our text. But it in fact strengthens his argument on pp. 119–120, where he argues that to say that children are born 'in heat' is an awkward way of indicating the embryo's characteristic faculty. On p. 109 he does agree with the addition of τὸ ψυχρὸν to P's text based on the reading in G. He cites the evidence of Q to confirm this reading, suggesting that the translation 'air' might be based on the presence of references to air in §3 and §5. However, he is unaware of Nicolaus' translation of G with its reading *aerem*. The reference to cold is important for establishing the Stoic tenor of the doxa, so there is a danger of circularity here.

For the verb in the second half of the doxa P^B has the indicative, P^G the infinitive. Diels and more recent editors opt for the latter. Laks (2008) 188 is right to say that the change is not mandatory. Not only is there much variation between infinitives and indicatives in doxographical texts, as he observes, but more specifically in sentences that follow the conjunction ὅθεν in A about half have the indicative in *oratio recta* and about half the infinitive in *oratio obliqua* (see further on A 5.16.1) Since Q cannot help decide, it is a situation of *non liquet* and we simply have to choose one or the other.

§5 In G's text of this lemma the name-label is followed by a colon and a text in *oratio recta*, a practice which is comparatively rare in A: examples at A 2.5.1 and 5.3.1; see our comments on the latter text at Commentary D(c). However, Nicolaus' translation gives the text in *oratio obliqua* and Jas is justified in emending the text.

e Other Evidence

As we saw above, in the fine parallel text at ps.Galen *Def.Med.* 445 the positive and negative views are presented anonymously. The former goes beyond the Platonic doxa in A in attributing pleasure to the embryo and thus also internal sense-perception. The negative position elaborates on the comparison with plants. The emphasis on ὀρμή and προαίρεσις may indicate a Stoic origin. Von Arnim oddly only includes the first part at *SVF* 2.756 and not the reference to the embryo's lack of προαίρεσις. The compromise view is attributed to Asclepiades, namely that the embryo is neither a ζῶον nor not a ζῶον, but like people who are asleep, i.e. having organs of sense-perception but not using them. This doctor, the latest chronologically to be included in the *Placita*, features on five occasions in Books 4 and 5 (including in the related chapter 4.22), but not here. His name is mentioned in relation to the similar question of the origin of soul in Tertullian, and is also cited on the difference between σπέρμα and γόνον at *Def.Med.* 441 and on the therapeutic powers of music in Censorinus 12.4.

Interestingly this third possibility involving sleep (without name-label) is also mentioned by Clement in his long discussion at *Strom.* 8.11–13 on how the definition of ζῶον must determine the arguments on whether plants and fetuses are ζῶα or not (see 8.13.4, 7). The possibility of sleep is also mentioned by Porphyry in the diaeresis at the beginning of *ad Gaur.*, but he introduces the philosophically more sophisticated notion of potentiality, i.e. that the embryo is a living being δυνάμει μόνον, οὐκ ἐνεργείᾳ (1.2).

a Proximate Tradition

General texts: *ps.Galen Def.Med.* 445, p. 19.451.18–452.17 K. υμε'. τινές μὲν εἶπον ζῶον, τινές δὲ οὐ· ὅσοι μὲν οὖν εἶπον ζῶον ὑπάρχειν αὐτὸ τῇ κινήσει ἐτεκμήραντο ζῶον ὑπάρχειν αὐτό. ἐπειδὴ γὰρ κινεῖται καὶ τὸ ἔμβρυον καὶ ὅτι ἡδεται μὲν ἡδομένης τῆς μητρὸς καὶ εὐφραίνεται, ἀνιωμένης δὲ συστέλλεται καὶ συνάγεται αἰσθανόμενον ὡς ζῶον· ἡ γὰρ αἴσθησις οὐκ ἄλλω τινὶ ἢ ζῳῷ προσφυής· οἱ δὲ μὴ εἶναι ζῶον λέγοντες (i.e. Stoics, *SVF* 2.757) τρέφεσθαι μὲν αὐτὸ καὶ αὔξεσθαι ὥσπερ καὶ τὰ δένδρα, ὁρμὴν δὲ καὶ ἀφορμὴν οὐκ ἔχειν ὥσπερ τὰ ζῳα. οὐ γὰρ αὐτὸ προαιρέτως οὐ μόνον κινεῖται, ἀλλ' οὕτε μετὰ προαιρέσεως, ἀλλ' ὡς τὰ δένδρα καὶ φυτὰ· τοῖς μὲν γὰρ αἴτιος κινήσεως ἄνεμος, ἐμβρύοις δὲ ἡ περὶ αὐτὰ ὑγρότης καὶ ὀλισθος καὶ τὸ σχῆμα τῆς μήτρας, πληρουμένη γὰρ σφαιροποιεῖται, σχῆμα δὲ ἡ σφαῖρα εἰς πᾶσαν κίνησιν εὐφυὲς ἅτε βάσεως ἀπάσης ἅμοιρος. Ἀσκληπιάδης (cf. Vallance *ANRW* 2.37.1, p. 721) δὲ οὕτε ζῶον, οὕτε μὴ ζῶον εἶπεν τὸ ἔμβρυον, ἀλλ' ὅμοιον ἔφησεν αὐτὸ τοῖς κοιμωμένοις· ὅνπερ γὰρ τρόπον ἐκεῖνοι μὲν ἔχουσιν τὰς αἰσθήσεις, οὐ χρώνται δὲ αὐταῖς, οὕτως καὶ τὸ κατὰ γαστρός. *ps.Galen An.Ut.* 1.3–10 Wagner ὅπερ φυσικοῖς καὶ πᾶσι φιλοσόφοις παρέχει μέχρι τῆς τήμερον περὶ τῆς τοῦ παντὸς φύσεως ζητήσιν, τοῦτο τοῖς Ἀσκληπιάδασι καὶ τοῖς τούτων ἐκγόνοις ἢ τοῦ γιγνομένου καὶ συνισταμένου βρέφους ἐν μήτρᾳ ἀμφίβολος ἔννοια. ὡς γὰρ οἱ τοῦ ὅλου τὴν ἔρευναν ποιοῦμενοι οὐδὲν σαφῶς ὥρισαντο πότερον ζῶον ἢ μὴ, τὸν αὐτὸν τρόπον καὶ οἱ τῆς τέχνης τῆς ἱατρικῆς προῖστάμενοι ἀόριστον τὸν ὑπὲρ τοῦ φυομένου παιδίου παρέδωσαν λόγον. **Clement of Alexandria** *Strom.* 5.1.5 ἀλλ' οὐδὲ τὰ ἀντιστρέφοντα (ἀντιστρέφει δὲ ἃ καὶ τοῖς τὸν ἐναντίον χειρίζουσι λόγον ἐπ' ἴσης ἔστιν εἰπεῖν, ὡς τὸ εἰ ζῶον τὸ κατὰ γαστρός ἢ οὐ ζῶον). *Strom.* 8.9.6–13.8, esp. 9.6–9 ἔστιν οὖν ἡ μέθοδος τῆς εὐρέσεως τοιαύτη· ἀρκτέον γὰρ ἐξ αὐτοῦ τοῦ γνωρίζειν τὰ προβλήματα. (7) πολλάκις γοῦν ἐξαπατᾷ τὸ τῆς λέξεως σχῆμα καὶ συγχεῖ καὶ ταράττει τὴν διανοίαν, ὥστε μὴ ῥαδίως εὐρίσκειν ἐκ ποίας ἐστὶ διαφορᾶς, οἷον εἰ (ζῶον ἢ) [suppl. Schwartz] μὴ ζῶον τὸ κούμενον· (8) ἔχοντες γὰρ καὶ ζῳῷ τι νόημα καὶ κουομένου ζητοῦμεν εἰ τῷ κουομένῳ ζῳῷ εἶναι ὑπάρχει, τοῦτο δ' ἐστίν, εἰ τῇ κουομένῃ οὐσίᾳ τό τε κινεῖσθαι δύνασθαι καὶ ἔτι τὸ αἰσθάνεσθαι ὑπάρχει. (9) ὥστε ἐνεργειῶν ἐστὶ καὶ παθῶν ἢ ζητήσις ἐπὶ προγινωσκόμενης οὐσίας. ... and 8.13.2–8 ἐναργῶς γὰρ ἐδείκνυτο τοῦ πράγματος αὐτοῦ τοῦ ζητουμένου, λέγω δὲ τοῦ ἐμβρύου τῆς φύσεως ὅποια τίς ἐστίν. ἕτερον ὑπάρχον πρόβλημα τὸ περὶ τῶν σημαινόμενων ἐκ τοῦ (ζῶον) ὀνόματος. (3) λέγω τοῖνον, εἰ τοῦτο λέγεις ζῶον τὸ δυνάμενον αἰσθῆσθαι τε καὶ κινηθῆναι καθ' ὁρμὴν, ζῶδὲν ἐστὶν οὐχ ἀπλῶς τὸ κινούμενον καθ' ὁρμὴν καὶ αἰσθανόμενον·

(4) δύναται γὰρ καὶ κοιμᾶσθαι ἢ μὴ παρόντων τῶν αἰσθητῶν μὴ αἰσθάνεσθαι ... (6) ἐζήτητο δὲ πότερον ζῶν ἐστὶν ἢ δὴ τὸ ἔμβρυον ἢ φυτὸν ἔτι, κάπειτα μετελήφθη τοῦ ζώου τοῦνομα εἰς λόγον, ἵν' ἢ σαφές. (7) αἰσθήσει δὴ καὶ κινήσει τῇ καθ' ὁρμὴν εὐρόντες αὐτὸ διαφέρον τοῦ μὴ ζώου, πάλιν τοῦτο διωρισάμεθα τῶν παρακειμένων αὐτῷ πραγμάτων ἕτερον μὲν εἶναι φάμενοι τὸ δυνάμει τοιοῦτον, ὃ μήπω μὲν ἐστὶν αἰσθανόμενόν τε καὶ κινούμενον, ἔσται δὲ ποτε τοιοῦτον, ἕτερον δὲ τὸ κατ' ἐνέργειαν ὑπάρχον ἢ δὴ τοιοῦτον, τούτου δὲ τὸ μὲν ἢ δὴ ἐνεργοῦν, τὸ δὲ ἐνεργεῖν μὲν δυνάμενον, ἡσυχάζον δὲ ἢ κοιμώμενον. (8) τοῦτο δὲ ἐστὶ τὸ ζητούμενον. οὐ γὰρ ἐκ τοῦ τρέφεσθαι τὸ ἔμβρυον ζῶν εἶναι λεκτέον, ὃ τῆς οὐσίας ἐστὶν ἀποχωρούντων τοῦ ζητουμένου, τοῖς δ' ἄλλως συμβεβηκόσιν προσεχόντων τὸν νοῦν. cf. also *Ecl. proph.* 50 ἔλεγεν πρεσβύτης ζῶν εἶναι τὸ κατὰ γαστρός. εἰσιούσαν γὰρ τὴν ψυχὴν εἰς τὴν μήτραν ἀπὸ τῆς καθάρσεως ἡτρεπισμένην εἰς σύλληψιν. **Tertullian** *de An.* 25.1–2, 5 *iam nunc regrediar ad causam huius excessus, uti reddam, quomodo animae ex una redundet, quando et ubi et qua ratione sumantur; de qua specie nihil refert, a philosopho an ab haeretico an a vulgo quaestio occurrat.* (2) *nulla interest professoribus veritatis de adversariis eius, maxime tam audacibus quam sunt primo isti, qui praesumunt non in utero concipi animam nec cum carnis figulatione compingi atque produci, sed et effuso iam partu nondum vivo infanti extrinsecus inprimi; ceterum semen ex concubitu muliebribus locis sequestratum motuque naturali vegetatum compinguescere in solam substantiam carnis; eam editam et de uteri fornace fumantem et calore solutam, ut ferrum ignitum et ibidem frigidae immersum, ita aeris rigore percussam et vim animalem rapere et vocalem sonum reddere. hoc Stoici (SVF 2.805) cum Aenesidemo (fr. B27 Polito) et ipse interdum Plato (cf. *Phd.* 70c), cum dicit perinde animam extraneam alias et extorrem uteri prima adspiratione nascentis infantis adduci, sicut expiratione novissima educi. videbimus an ex sententia finxerit. ne ex medicis quidem defuit Hicesius, et naturae et artis suae praevaricator. ...* (5) *hoc* (sc. instrument for abortion) *et Hippocrates* (cf. *Mul.Aff.* 70) *habuit et Asclepiades* (cf. Vallance *ANRW* 2.37.1, p. 727) *et Erasistratus* (—) *et maiorum quoque prosector Herophilus* (T247 Von Staden) *et mitior ipse Soranus* (T18 Podolak), *certi animal esse conceptum atque ita miserti infelicissimae huiusmodi infantiae, ut prius occidatur, ne viva lanietur.* **Porphry** *ad Gaur.* 1.1, p. 33.3–15 *Kalbfleisch ...* κοινῶς μὲν τῶν φυσικῶν καὶ σχεδὸν τῶν ἱατρῶν πάντων ἀπορησάντων, πότερον χρὴ ζῶα ἡγεῖσθαι τὰ ἔμβρυα ἢ φυτικῶς ζῆν αὐτὰ μόνον, τῆς μὲν ἰδιότητος τοῦ ζώου ἐν αἰσθήσει καὶ ὁρμῇ συνισταμένης, τῆς δὲ τῶν φυτῶν ἐν θρεπτικῇ τε καὶ αὐξητικῇ χωρὶς αἰσθήσεώς τε καὶ ὁρμῆς θεωρουμένης· ὅθεν τῶν ἐμβρύων φαντασίας μὲν χωρὶς καὶ ὁρμῆς διεξαχόντων, αὐξητικῶς δὲ καὶ θρεπτικῶς μόνον διοικουμένων—μαρτυρεῖ γὰρ ἄμφω τὰ γινόμενα—φυτὰ μὲν ἢ φυτοῖς ὅμοια συγχωρεῖν, ζῶα δ' ἡγεῖσθαι διὰ τὸ μέλλειν ἐκ γαστρός προελθόντα ζωοῦσθαι μὴ προπετές ἢ καὶ ἀνδρῶν ἀβασανίστως μεμελετηκότων ταῖς τῶν πολλῶν δόξαις συνήκειν· ἰδίᾳ δ' αὖ πάλιν τῶν καὶ ζωικῆς ψυχῆς αὐτὰ μετέχειν ὑπειληφότων ἀμφισβητησάντων, πότερον καὶ ἐνεργεῖα ζῶα χρὴ λογιζεσθαι τὰ ἔμβρυα ἢ δυνάμει μόνον, οὐκ ἐνεργεῖα. **Sopater** *Scholia ad Hermogenis Status* 476.3 Waltz ἔτι δὲ οὐ μόνον τοῦ ῥητορικοῦ ὅρου οἰκεῖός ἐστιν ὁ ὅρος ἀλλὰ καὶ τοῖς φυσικοῖς ἀρμόσει· καὶ γὰρ ὁ ἱατρός ζητῶν πότερον τὸ ἔμβρυον

ζῶν ἐστιν ἡ οὐ. **Psellus** *Omn.Doctr.* 115 τρισὶν ἐνέτυχον μονοβίβλοις περὶ τούτου τοῦ ζητήματος, Ἰπποκράτους (i.e. *Nat.Puer.*), Πορφυρίου (i.e. *ad Gaur.*) καὶ Γαληνοῦ (i.e. *An.Ut.*). ὦν ὁ μὲν Ἰπποκράτης καὶ Γαληνὸς ζῶν αὐτὸ φασιν ἐν τῇ γαστρὶ εἶναι, καὶ κινεῖσθαι ὑπὸ ψυχῆς τὸ μὲν ἄλογον τῆς ἀλόγου, τὸ δὲ λογικὸν τῆς λογικῆς· τρέφεσθαι τε ἐν τῇ μήτρᾳ διὰ τοῦ στόματος, εἶναι γὰρ ἐν ταύτῃ θηλάς τινὰς καὶ στόματα δι' ὧν τρέφεται. ὁ δὲ γε Πορφύριος πολλοῖς λογισμοῖς καὶ ἀποδείξει διατείνεται μὴ εἶναι τὸ ἔμβρυον ζῶν μηδὲ ἐμψυχωμένον, ἀλλὰ δίκην φυτοῦ καταπεφυτεῦσθαι ἐν τῇ μήτρᾳ, καὶ κινεῖσθαι οὐχ' ὑπὸ ψυχῆς, ἀλλ' ὑπὸ φύσεως, ὥσπερ δὴ καὶ τὰ δένδρα καὶ τὰ φυτὰ κινεῖσθαι εἴωθε (see also on ch. 5.16). cf. *Omn.Doctr.* 59 Πότε ἡ ψυχὴ τῷ κυομένῳ ἐνοῦται σώματι. ... τῶν δὲ Ἑλλήνων οἱ πρόκριτοι μετὰ τὴν τελείωσιν τοῦ φυσικοῦ ὄργάνου καὶ τὴν ἀποκύψιν τούτου ἐνσπείρουσι ταύτην τῷ σώματι· πλὴν ὅτε μὲν ἔσωθεν ἡ κατερριζωμένον τὸ ἔμβρυον τὴν φυσικὴν ψυχὴν τοῦτῃ διδῶσιν, ἐξελθόντι δὲ τὴν λογικὴν, καὶ προϊόντι τὴν νοεράν. also *Phil.Min.* 1 op. 16, p. 48.10–19 Duffy Πότε ψυχοῦνται τὰ ἔμβρυα. ... τῶν δὲ γε παρ' Ἑλλήσι σοφῶν οἱ μὲν μορφωθέντα ψυχοῦσι τὰ ἔμβρυα, οἱ δὲ αὐτίκα μέλλοντα κινήσθαι κατὰ γαστρός, οἱ δὲ τῆς μήτρας ἀποσπασθέντα καὶ διατυπωθέντα πρὸς ὄλισθον. οἱ δὲ γε τελεώτεροι τούτων μετὰ τὸν τοκετὸν τὴν λογικὴν ψυχὴν μεταλαμβάνειν φασί, καὶ μεταβάλλειν ἀθρόως ὥσπερ ὑπὸ φωτὸς θείου ἀναπτόμενα ἡ ζῶντα ἔνδοθεν δὲ τῆς μήτρας ζῆν μὲν, ἀλλὰ τὴν φυτικὴν ζωὴν καὶ παντάπασιν ἄλογον, ὥσπερ ἐκ ῥίζης τοῦ ὀμφαλοῦ κατερριζωμένα τῇ μήτρᾳ, τὴν τροφὴν χορηγούμενα, ζῶα δὲ μήτε εἶναι μήτε ὀνομάζεσθαι, ἀτελὴ ὄντα πρὸς μετουσίαν τῆς θειοτέρας ψυχῆς.

Chapter heading: **ps.Galen** *An.Ut.* (title) Εἰ ζῶν τὸ κατὰ γαστρός. cf. **Clement of Alexandria** *Strom.* 8.10.1 ἔστιν οὖν ἡ μέθοδος τῆς εὐρέσεως τοιαύτης· ἀρκτέον γὰρ ἐξ αὐτοῦ τοῦ γνωρίζειν τὰ προβλήματα. πολλάκις γοῦν ἐξαπατᾶ τὸ τῆς λέξεως σχῆμα καὶ συγχεῖ καὶ ταράττει τὴν διάνοιαν, ὥστε μὴ ῥαδίως εὐρίσκειν ἐκ ποίας ἐστὶ διαφορᾶς, οἷον εἰ ζῶν ἢ ζῶν τὸ κυούμενον. **Sopater** *Schol. ad Her-mogenis* Περὶ στάσεως p. 476.2–7 Waltz ἔτι δὲ οὐ μόνον τοῦ ῥητορικοῦ ὅρου οἰκεῖός ἐστιν ὁ ὅρος ἀλλὰ καὶ τοῖς φυσικοῖς ἀρμόσει· καὶ γὰρ ὁ ἱατρός ζητῶν πότερον τὸ ἔμβρυον ζῶν ἐστὶν ἢ οὐ· ἐκλείποντος καὶ τοῦ ὄντος ἐπιχειρεῖ· ὁ μὲν γὰρ λέγων ζῶν αὐτὸ εἶναι, ἐκ τοῦ ὄντος καὶ οἰονεῖ πεπραγμένου ἐπιχειρεῖ· ὁ δὲ λέγων μήπω εἶναι αὐτὸ ζῶν, ἐκ τοῦ λείποντος. cf. **Codex Marcianus** 521 f. 100^r (*DG* p. 233 Diels, from *Def.Med.* 445) εἰ ζῶν τὸ κατὰ γαστρός.

Commentary

A *Witnesses*

The Byzantine mss. and Q preserve three doxai. Both G and Psellus abridge the first two and ignore the third, the latter in a chapter which combines the heading of 5.15 and 5.16. S retains only the heading in the ms. S^L.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The two chief proximate texts, Censorinus and ps.Galen *Def. Med.*, both contain recognizable versions of the first two doxai with the order reversed (we note the former's use of the term *opinio*, i.e. doxa). But there

is no correspondence in name-labels. Censorinus has three: Anaxagoras, Diogenes, Hippo, while ps.Galen presents anonymous views only. The two treatises by ps.Galen (*An. Ut.*) and Porphyry on whether the embryo is a living being (see on ch. 5.15) treat the question differently. Ps.Galen follows the Hippocratic view that the embryo receives food from the mother through its mouth (i.e. cf. §1), but does not record the other opinion. Porphyry is only interested in the subject in relation to the interaction of soul and body (see *ad Gaur.* 16.3).

(2) *Sources.* The sources still available to us indicate that the topic was often discussed, with the two main opposed positions prominent, but often supplemented with mention of breast-like pieces of flesh which the embryo can suck on. Aristotle supports the view that the umbilical cord is the conduit of food to the embryo and at *GA* 2.7 746a19–26 attacks the view that it is fed via its mouth by sucking on a *σαρκίδιον*, citing the evidence of animal dissections (ps.Galen *An. Ut.* at §5 14.13–16 may be arguing against this statement when he says that the existence of a membrane around the womb will not stop the supply of food to the embryo). He appears to have Diogenes of Apollonia in mind, rather than the Hippocratic writers, if we are to believe Censorinus and Aristophanes of Byzantium (texts below section E(a)&(b) General texts). The opposition of the first two *doxai* thus goes back at least to the Peripatos. The view recorded for Alcmaeon (24A17 DK) by the second cent. CE medical author Rufus as recorded by Oribasius differs from what is found in §3. Our author makes no mention of the role of milk produced by the mother prior to birth and conveyed to the womb through the vessels connected to the breasts. The role of milk is prominent in accounts of Aristotle *HA* 4.8 776a15–b3 and *Corpus Hippocraticum Nat.Puer.* 10; see Lonie (1981) 204.

C Chapter Heading

The chapter heading is one of 13 in this book introduced by with *πῶς* and the indicative, thus seeking the cause. It occurs in this form elsewhere only in a very late text in Ioannes the physician (seventh cent.) which relates it primarily to the question of whether the fetus is a plant or an animal (cf. ch. 5.15).

The text of heading in *S^L* is identical to the majority reading in the tradition of P (cf. Wachsmuth 1882, 17). On the chapter headings in *S^L* see above, ch. 5.4 Commentary C.

D Analysis

a Context

The topic follows on logically from that of the previous chapter. Whether an embryo is a *ζῷον* or a plant, it grows and for that process it needs nourishment. As noted above, Ps combines the two topics in a single chapter.

b Number–Order of Lemmata

There are three doxai. Given the parallels elsewhere and the fact that the usual diaeresis is well covered, the chapter may be complete, though not including all the names found in the proximate tradition.

c Rationale–Structure of Chapter

The first two doxai are formulated in clear opposition to each other. The cause is indicated through the two prepositional formulas διὰ τοῦ στόματος and διὰ τοῦ χορίου καὶ τοῦ ὀμφαλοῦ. There then follow clauses in each doxa commencing with ὅθεν referring to the time immediately after the birth (both with the adverb εὐθέως) which give evidence for the position taken. The name-labels in both cases are unsupported by other evidence. Censorinus reverses the order of the two views; for the ‘umbilical’ view he cites Anaxagoras and ‘quite a few others’ (both the placement and the formulation of the name-labels may indicate the majority view), for the ‘oral’ view he gives the names of Diogenes and Hippo. As noted above in section B, the mention of Diogenes is reinforced by Aristophanes’ identification with the anonymous thinkers criticized by Aristotle at *GA* 2.7 746a19–20. Psellus identifies the ‘oral’ view with both Hippocrates (probably from *De carnibus*) and Galen (from *An.Ut.*), based on his own wider reading.

The third doxa attributed to Alcmaeon is clearly formulated in opposition to both previous views. Rather than from a particular part, the process of nourishment occurs through the whole body, the embryo taking up the nourishing elements like a sponge. There are no parallels for this third view, which as a theory does seem rather strange. It may have arisen from a misunderstanding of the view that the blood conveys nourishment from the mother’s entire body by means of the umbilical cord, which is attached to the womb through blood-vessels. See the description by Aristotle at *GA* 2.7 745b23–35. Galen often uses the metaphor of the sponge, e.g. *UP* 3.318.4–8 K. on the spleen, but not for the embryo (in *A* also used at 4.18.2 on taste). As we have already seen, a text going back to the physician Rufus associates Alcmaeon with the ‘oral’ view. Lloyd (1991) 178 notes the suggestion by Olivieri that στόματι be emended to σῶματι in order to bring the two texts into line, but there is no evidence to support this move in Oribasius’ text.

This thus may well be a case in the *Placita* where ‘the tail wags the dog’. The desire for a diaeresis of views has led to the unclear formulation of a third view, and it also appears to have received an inappropriate name-label.

d Further Comments

Individual Points

§1 The two further pieces of information that we have regarding atomist views on this subject focus on different roles for the umbilical cord, Aristotle *GA* 2.4 740a33–37 and Plutarch *Am.Prol.* 495E neither confirm nor contradict this view (texts below section E(b)§1). As Morel (1996) 163 notes, Aristotle's report that Democritus believed that the fetus stays in the womb so that it can be moulded after its mother's features does not cohere well with the views that the female has her own semen (A 5.5.1) and that the mother helps to determine the sex of the infant (A 5.7.7).

As in the previous chapter there is variation in our witnesses between indirect speech with verbs in the infinitive and direct speech with verbs in the nominative. Following ὅθεν there are, setting aside this text, three instances with the former (A 2.30.2, 5.5.5, 5.15.4) and three with the latter (A 1.6.1, 3.12.2, 5.7.1). In the present case we have followed Diels in choosing for the infinitives in G as opposed to the indicatives in P. The move to the plural in the final word τρέφονταί as recorded in the mss. of P^B seems particularly dubious.

§2 The final phrase of this doxa is difficult, because all four witnesses record a different text:

- P^B ἵνα ἑτέρα γένηται ἡ μελέτη τῆς τροφῆς
 Q *sodaß der Nahrungsweg durch einen anderen Ort verläuft*
 G ἵνα διὰ τοῦ στόματος αἰσθητῶς τρέφεται
 Ps ἵνα διὰ τοῦ στόματος τὸ γεννηθὲν τρέφηται.

It is evident that these four texts divide into two groups: P^B and Q are similar, while G and Ps closely resemble each other. It has to be said that the reading in G and Ps makes excellent sense in continuing the theme of the mouth (στόμα) from §1. However, the use of the adverb αἰσθητῶς is a little suspect, finding no parallel elsewhere in A. On the other hand the expression ἡ μελέτη τῆς τροφῆς in P^B is also distinctly unusual, with only a distant parallel in the words τῆς φύσεως τοῦ κόσμου οὕτω μεμελετηκυίας in the next chapter, 5.17.1.

It should also be noted that the correspondence between G and Ps indicates that the Byzantine scholar must have had a copy of P (as far as we know he had access neither to A nor to G) which stood closer to G's text on this point. This agreement must be placed against the agreement of P^B and Q. There are no decisive grounds for determining which of these versions originally stood in A. We have decided to retain the text of P^B with its extra detail on the widening of the mouth, which none of the other witnesses have.

e Other Evidence

As noted above in section D(c), Censorinus reverses the two views and seems to indicate with the phrase ‘with several others’ that the ‘umbilical’ view is dominant. Ps.Galen only records the ‘oral’ view as a false alternative. A places his three views side by side and in his usual manner appears happy to have a diversity of opinions.

Commentary

A *Witnesses*

In answer to the question posed by the chapter heading P^B preserves a list of six briefly formulated doxai, all of which G retains without any substantial modification.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* By far the most significant doxographical parallel is found in Censorinus. Unlike A he begins with a sceptical position attributed to Alcmaeon: no one can determine *quid primum in infante formetur* ('what is first formed in the baby'). This view is followed by a list of five doxai citing various candidates—heart (cf. A §4), head (cf. A §3), belly and head, brain, flesh—bones—tendons etc. (cf. A §5). Censorinus then continues with the view of the Stoics with which A begins, i.e. that the development of the fetus occurs as a whole. This is the only exact parallel for the name-labels found in this chapter. A attaches different views to the names Aristotle and Alcmaeon compared with Censorinus, and the latter does not have any reference to doctors. The remainder of Censorinus' passage discusses views on how the development of the fetus takes place, whether by nature or pneuma or etherial heat, for which there is no equivalent treatment in A. The other main proximate parallel for the topic of this chapter is ps.Galen, who at *Def.Med.* 452 poses the question but does not record any diversity of opinion, presenting only the dominant medical viewpoint that the first part to form is the umbilical cord.

(2) *Sources.* Aristotle already gives a variety of opinions on this subject in a surprising location, i.e. when in Book Δ of the *Metaphysics* (text below, section E(b) General texts) he discusses the various meanings of the term ἀρχή as used in ordinary language. One of its meanings can be 'internal point of commencement,' i.e. 'that part of a thing from which genesis begins', as paraphrased by Ross (1924) 1.290. The illustrations given are the keel of a boat (cf. A §2), the threshold of a house, while in the case of living beings some people think it is the heart (cf. A §4), others the brain (cf. Anaxagoras in Cen-

sorinus 6.1) or whatever other alternative they come up with. The final two views constitute an early reference to the discussion which is already mentioned in the *Corpus Hippocraticum* at *Morb.Sacr.* 17 (cited on ch. 4.5 section E(b) General texts: do we think with the heart or the brain). In his biological writings, however, he considers only the view that the heart is the first part to be formed (see the various texts collected below in section E(b) General texts). Aristotle thus provides evidence of earlier discussions, but almost no names of earlier thinkers are supplied (only Democritus at *GA* 2.4 740a13). Centuries later Galen also refers to previous research at the beginning of his treatise on the formation of the fetus. Characteristically (and ignoring Aristotle's statement at *Juv.* 3 468b29) he states that philosophers have posed questions on this subject and come to erroneous and conflicting views (note the term διαφωνῆσαι), but this is no wonder, because they did not make use of the available empirical evidence. They should follow the example of Hippocrates, who did not follow 'logical suppositions' (λογικαὶ ὑπόνοιαι), but observed what could be seen in the case of an induced abortion (the famous text in *Nat.Puer.* 2). Even though A cites the view of 'the doctors' (§4), he largely follows the theoretical method of the philosophers. Lactantius attributes to Varro (no doubt his source) and Aristotle the view attributed to the doctors in A; text below E(a)§4.

C Chapter Heading

The witnesses furnish two quite different versions of the chapter heading. In P^{BQ} and G we find Τί πρῶτον τελεσιουργεῖται ἐν τῇ γαστρί. This heading is also found in the pinax recording the contents of the mainly lost ch. 42 of Stobaeus *Ecl.* Book 1; see the text at Wachsmuth (1882) 17, Diels *DG* 271. However, earlier in the same list an alternative heading is found: Ἀπὸ ποίου ἄρχεται μορίου μορφοῦσθαι το ἔμβρυον; see Wachsmuth *ibid.* This heading is very similar to that on the cosmos at A 2.6, Ἀπὸ ποίου πρῶτου στοιχείου ἤρξατο κοσμοποιεῖν ὁ θεός. Elter (1880) 73–74 argued that the earlier heading on the list was based on the heading of ch. 5.22, but this is not so likely given the divergence of the subject matter (the latter chapter does not have a temporal aspect). He concluded on this basis that the second heading Τί πρῶτον κτλ. was interpolated from P. It might be argued that the first heading Ἀπὸ ποίου ἄρχεται μορίου κτλ. suits the contents of the chapter as preserved by P better, which focuses on the part which is the first to be formed (i.e. before the whole embryo is formed). But the second heading, which can be taken to focus on 'initial completions' could also be taken in this sense. Comparison with the contents of ch. 5.21 (and esp. the terminology in 5.21.1) suggests a distinction between 'commencement' (ἄρχεσθαι) and 'completion' (τελειοῦσθαι), so this distinction

would explain what was listed in ch. 5.17. If this is correct, then both headings would suit the chapter's contents. Thus the question of which heading stood in the original text of S must be regarded as a conundrum, which cannot be definitively solved on the basis of the present evidence. It is safest, therefore, to retain the heading in P, even if its presence in S^L may be the result of interpolation. On the chapter headings in S^L see above, ch. 5.4 Commentary C.

The parallel between ch. 2.6 and the current chapter highlights the macrocosm–microcosm relation between the cosmos and, among living beings, the human being in particular. The doxographical tradition takes this over from the tradition of Plato's *Timaeus*, although (despite the heading in ch. 2.6, on which see our Commentary ad loc.) the theological and teleological emphases are much reduced. For the focus on commencement (τί πρῶτον) and completion (τελεσιουργεῖται) compare the related ch. 5.21, Ἐν ποίῳ χρόνῳ μορφοῦται τὰ ζῶα ἐν τῇ γαστρὶ ὄντα, where the heading only speaks of 'shaping', but the doxai themselves mention ἄρχεσθαι once and τελειοῦσθαι three times. We should note too that the Damastes excerpt, on which see ch. 5.18 Commentary D(e), uses the terminology of shaping (μόρφωσις) by implication for the completion of the initial stage of the embryo. The same theme of beginning and completion returns in ch. 5.23, Πότε καὶ πῶς ἄρχεται ὁ ἄνθρωπος τῆς τελειότητος.

D Analysis

a Context

The third of the five chapters on embryology (chs. 15–18, 21) follows on logically from the previous two on the nature and nourishment of the fetus. On receiving nourishment it starts to grow and take shape. One may then ask what is completed first.

b Number–Order of Lemmata

With its six doxai, this is one of the better populated chapters in Book 5, though of course the individual doxai are very brief indeed (compare ch. 5.7 with 5.8 and 5.16 and 5.20, which also have 6). The slightly longer and differing list in Censorinus suggests that P may have abridged.

c Rationale–Structure of Chapter

The formulation of the question with 'what first' invites the presentation of a list, which A readily provides. One might compare the identification of the ἡγεμονικόν in ch. 4.5, where we get a long list of 13 locations organized in two main groups *a capite ad calcem* (see Commentary D(c)). But the list in the present

chapter is decidedly less well organized, as the comparison with the parallel chapter in Censorinus shows.

A commences with the Stoic view that Censorinus places last, that no first part can be identified because all parts are formed simultaneously. This view also appears to be defended by the Hippocratic author of *Regimen* (text below). Galen, however, attributes the Aristotelian view (on which see below under (c)) to 'Chrysippus and many other Stoics' (*Foet. Form.* 4.4). The remaining five doxai all single out a part which is completed first.

(a) For the view that it is the loins we have found no parallels. The attribution to Aristotle is certainly mistaken, since he repeatedly states that the ἀρχή for development of the living being is the heart or its equivalent. The only further detail given is the non-transparent image of the keel of a boat, on which see below, section D(d).

(b) The view that it is the head, which contains the ἡγεμονικόν (cf. ch. 4.5) is attributed to Alcmaeon (cf. to Hippo in Censorinus). The reason is implicit in the reference to the 'directive part', which is thought needed to 'direct' the process of development.

(c) The view, vigorously defended by Aristotle in his biological works, that the heart is the first part formed is attributed to the 'doctors' (cf. to Empedocles and Aristotle in Censorinus). The attribution is curious, since it is the typically 'philosophical' and not 'medical' view. The mention of 'veins' and 'arteries' also points to the source in Aristotle's biological works, where their connection to the heart is mentioned (strictly speaking 'veins' only; veins and arteries together in the paraphrase in Aristophanes of Byzantium; texts below). Censorinus gives as reason for this view that the heart 'most of all contains the life of the human being'. The deliberate parallelism in formulation between §3 and §4, both with clauses commencing with ἐν ᾧ, should be noted. They are meant to be compared, the one view emphasizing the directive element, the other the physical transmission of life (and blood).

(d) The anonymous view that the 'large toe of the foot' is first formed is a curiosity, exactly the kind of view that A, the collector of unusual views, likes to include. It perhaps originates from the misunderstanding of a text, e.g. the view of Diogenes of Apollonia in Censorinus that the flesh is first formed, from which then the bones and other parts develop, or the view in a brief treatise in the Hippocratic tradition edited by Jouanna (2008) 35 that the baby first moves when the fingers/toes (the term δάκτυλος covers both) and nails have taken root (text below section E(b); cf. also *Nat.Puer.* 10, on which see ch. 5.21 Commentary D(d) on §2). Another possibility is that it is based on a parody of Chrysippus' argument that walking is not the *pneuma* transmitted from the *hegemonikon* to the feet (Cleanthes) but the *hegemonikon* itself (Seneca *Ep.* 113.23 = SVF 2.836, text below E(b)§5).

(e) Finally A mentions another anonymous view that the umbilical cord is the part formed first. This is in fact the view that Galen, appealing to the Hippocratic tradition, strongly favours. He claims that it is based on anatomical observation rather than philosophical logic.

The contents, structure and organization of this chapter are disappointing, as we can easily see when they are compared with what is found in Censorinus. It would seem to be illogical to begin with the holistic view, which does not privilege any of the bodily parts (but perhaps it is placed first on an analogy with chapters in which the existence of the phenomenon is first discussed, e.g. chs. 1.7, 1.24, i.e. there is no 'first thing', or that it cannot be known, cf. the doxa of Alcmaeon in Censorinus). The doxa would have been better placed at the end, as in Censorinus. If there is any reasoning behind the ordering of the remaining views, it is difficult to determine what it is (except the opposition between §3 and §4). The first doxa (§2) is quite obscure, while the final one, in spite of its importance, is tacked on at the end (but admittedly is missing entirely in Censorinus, unless it is implied by the Democritean view). The Latin writer also indicates much more clearly what the reasoning is behind the selection of the various options.

d Further Comments

Individual Points

§1 The reading in P^B, οἱ Στωικοὶ τοῖς πολλοῖς γίνεσθαι, is rather strange. All editors since Diels rightly prefer the reading in G and Q, which is reinforced by the parallel in Censorinus. Diels suggests it is the remnant of a scholion, but it could also be the result of corruption. It is yet another indication that errors crept into the Byzantine tradition quite late.

The Stoic position seems to be rejected by Aristotle when stating at the beginning of his discussion in *GA* 2.1 735a14–15 that a first thing must come into being, but it is not clear whether he has any thinker in mind for this position, or whether it is just a theoretical alternative.

§2 The image used here for the loins 'like the keel of a ship' is quite striking. Mansfeld (1990a) 3213 agrees with Diels that it cannot be a coincidence that the same image is used by Aristotle at *Met.* Δ.1 1013a4–7 when giving an example of 'a thing as the result of whose presence something first comes into being' and argues that it has been 'garbled' somehow or other in the tradition. Remarkably the same image is used in ch. 2.5a.4 in a doxa of Philolaus on the ἡγεμονικόν of the cosmos. As noted by Sharples–Van der Eijk (2008) 167, the image is frequently used by Galen for the backbone or spine, e.g. at *Ars Med.* 10.5 Boudon, *UP* 3.3, p. 12.10 Helmreich, and is also found at Lactantius *Op.D.* 5.4 and Nemesius *NH* 28, p. 93.3 Morani. A similar image is found at Porphyry *ad Gaur.* 10.4, but in relation to the entry of the soul as pilot.

§3 For further observations on the links between this chapter and ch. 4.5 on the ἡγεμονικόν see Mansfeld (1990a) 3013, 3212–3216.

e Other Evidence

There can be little doubt that connections exist between the only three lists that we have in answer to this quaestio. Those of A and Censorinus are parallel, though curiously divergent, esp. in their name-labels. That there is also a link with Aristotle's use of the image of the keel at *Met.* Δ 1 1013a4–7 can hardly be doubted. As so often A appears to stand in a rich tradition. This time he might have made better use of it.

There remains to be discussed an intriguing text in Philo, *Leg.* 2.6 (cited below, section E(a)§§2&4). It states that the heart is formed before the rest of the body, i.e. the view of §4 in our chapter. Philo uses two images for this role, the foundation of a house and the keel of a ship, the latter being the same image used in §2 of the loins and by Aristotle of the heart in the text in *Met.* Δ. Philo attributes this view to 'the best of the doctors and natural philosophers', which again recalls §4 and the doctors holding the view on the heart. This last-mentioned name-label would come naturally to someone using *Placita*, as we know that Philo did for his texts on the heavens and the mind; see ch. 2.11 Commentary B, and Wendland (1897). The inference that for this text Philo here recalls material from the *Placita* tradition and that it may have contained the image drawn from Aristotle's works for this very question is very tempting to make. For this reason we have placed this Philonic text among those derived from the proximate tradition.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

P^B preserves six doxai, all of considerable length, making this chapter by far the longest in the book. Unusually G, though retaining all but the first lemma, alters the order, starting with §§4–6 and ending with §§2–3. It is to be noted that the new edition of Jas deviates in a number of places from the earlier text in Diels *DG*. Taking the translation of Nicolaus into account, she shows that some cases his text is closer to P^B than appears from the text as edited by Diels.

This is the first chapter in Book 5 for which S contributes material apart from the chapter headings. In the mutilated state of his transmission he records §4 on Aristotle and Hippocrates. The chapter heading, however, is found only in the Laurentianus manuscript.

B *Proximate Tradition and Sources*

(1) *Proximate tradition*. As was the case for the previous chapter, by far the most important parallel is found in Censorinus. All in all he devotes no less than five chapters (7–11) to the theme of the length of human gestation. In ch. 7 a compact overview is given of the various views, which can be summarized as follows:

- 7th, 8th, 9th or 10th month—all possible according to Hippo
- 7th month—affirmed by Theano the Pythagorean, Aristotle, Diocles, Euenor, Strato, Empedocles, Epigenes and many others, denied by Euryphon of Cnidos
- 8th month—denied by Epicharmus and by almost all, except Diocles and Aristotle (and Hippo)
- 9th and 10th month—affirmed by most Chaldeans and Aristotle
- 9th month—denied by Epigenes of Byzantium
- 10th month—denied by Hippocrates
- 11th month—denied by all except Aristotle

A long explanation is then given in ch. 8 of the astrological basis of the Chaldean opinion. The remaining chapters focus on the Pythagoreans. They are said to relate physiological phenomena to their views on music and numbers which are set out at some length. Varro's work *Tubero de origine humana* is cited as the source (ch. 9.1). Because Censorinus is treating the birthday theme, he scarcely draws on any physiological doctrines in his account, focusing almost exclusively on arithmological and astrological explanations. The same arithmological considerations are found in brief treatments in ps.Galen *Def.Med.* and Tertullian.

(2) *Sources.* The topic of whether seven- and eight-month-old fetuses are viable is the most frequently discussed of all physiological subjects in not specifically medical Greco-Roman literature. It is quite fitting, therefore, that the late 11th cent. Byzantine commentator Ioannes Doxapatres cites it as his example of a medical quaestio in the form 'why do seven-month-olds live but eight-month-olds not' (text below section E(b) General texts). Censorinus and Aulus Gellius also note it as a much discussed question. Its scope could vary. Aulus Gellius extends it to ten-month-olds, which for him is the limit. In other texts it is extended further to eleven- and even twelve-month-olds. Greek views on the viability of babies also exercised influence on Jewish and early Christian tradition, as statements by the rabbis Huna and Abbahu recorded in *Genesis Rabbah* testify; see Van der Horst (1978) 352, (2018) 113; text below section B(b) General texts. As the same scholar notes, the doctrine was applied to important babies in the biblical tradition, including Moses, Mary and Jesus, emulating similar statements on mythical heroes in Greek tradition; see further Van der Horst (1978).

Investigation goes back to the Hippocratic school. The treatise *De octimestri partu* gives a comprehensive discussion of the subject and other treatises refer to it also. We follow the reconstruction of Joly (1970) for the treatise, in opposition to Grensemann (1968b). It is to be agreed with the latter (1968c), however, that there are good grounds for attributing it to Hippocrates' son-in-law Polybus. The doxographical tradition, including the present chapter (§§3–5), the parallel report in Clement *Strom.* 6.138–139 and the text in the Anon. Brux. 12 (texts below E(b)§4), provide crucial evidence for the attribution; see the detailed analyses in Grensemann (1968b) and our comments below. The attribution is contested, however, by Jouanna (1969), (1999) 387. On ancient references to *Oct.* see further Anastassiou–Irmer (2006) 374–379. The topic is also extensively discussed in various Aristotelian texts, though the discussion promised at *GA* 4.4 772b11 has not survived; see further on the Aristotelian doxa in section D(c) below. Unfortunately texts in other authors such as Diocles and Strato mentioned in doxographical reports have also been lost. In 1999

H.N. Parker published a fragment attributed to a certain Damastes entitled *Περὶ τῶν γονίμων καὶ τελειουμένων* (On those who conceive and complete, i.e. carry to term), from a work *Περὶ κυουσῶν καὶ βρεφῶν θεραπείας* (*On the care of pregnant women and of infants*); see Parker (1999), text and translation on pp. 515–516. In his excellent discussion of this text Parker persuasively argues that it can safely be ascribed to the second century BCE doctor Damastes mentioned by Soranus; see the discussion on pp. 517–518. This text is discussed in more detail in section D(e) below. We note, finally, that the majority of later non-medical texts refer to the subject in an arithmological context.

The challenge is to compare the distinctive material found in A with the remainder of this extensive tradition. Because of the diversity of sub-topics and approaches, it is a complex task to determine to which traditions the copious available parallel texts belong. See further section D(e) below.

C Chapter Heading

The chapter heading once again uses the formula *διὰ τί* to inquire after the cause; see our comments on chs. 5.9 and 5.14. The question posed, relating to seven-month-olds only, has a narrower focus than the contents of the chapter itself, which discusses the entire range from seven-month- to twelve-month-olds. Ps.Galen *Def.Med.*, ps.Alexander and Ioannes Doxapatres all include a reference in their formulation of the quaestio to the non-viability of eight-month-olds. But even this would be too narrow. A has thus retained the traditional compact formulation of the subject, even though the chapter's treatment is much wider. This occurs more often in the doxographical tradition. We might compare ch. 2.4, where the heading asks whether the cosmos is indestructible but the chapter itself treats the themes of both genesis and destruction.

The heading in S^L is identical to that found in the tradition of P (cf. Wachsmuth 1882, 17). On the chapter headings in S^L see above, ch. 5.4 Commentary C.

D Analysis

a Context

The subject follows on well enough from the previous chapter on what is completed first in the womb. However, since it assumes the completion of the development of the fetus preceding birth, it would have been more logical to place ch. 5.21 on the articulation of parts of the body in the developing fetus between chs. 5.17 and 5.18.

b Number–Order of Lemmata

The order of the six lemmata in P must be accepted. The alternative order in G was perhaps motivated by dissatisfaction with P's order, but is hardly an

improvement (and he deletes the first doxa). The more detailed treatment of the various periods in Censorinus suggests that A's chapter may have originally included more doxai, even though the chapter as preserved is already rather long. Because only a single doxa remains in S, he cannot help us with the original order of the lemmata.

At the end of the right (i.e. Stobaeian) column at *DG* 429 Diels added the name-label Εὐρυφῶν ὁ ἰατρός, based on its mention in Photius' list at *Bibl.* 115b and its occurrence in Censorinus' report at ch. 7.5. But it must be agreed with Elter (1880) 65 that this is mistaken. As Diels himself notes ad loc., a saying of the doctor is already recorded at *Ecl.* 1.8.40a, p. 102.14–15 Wachsmuth. But this should have meant that the name was included in Photius' first alphabetical list at 113b (discussed by Elter p. 43), where as Elter suggests it may have dropped out. Its occurrence in the fifth alphabetical list implies that there must have been an excerpt or saying in Book 4 of the *Anthology*, probably at 4.35–37 (Elter p. 65). Diels does not refer to the question in his review of Elter's study (1881).

c Rationale–Structure of Chapter

In order to understand what A has tried to do in this chapter, we must first examine the various doxai individually. The relevant parallel texts are cited below at section E(a) and (b).

(1) Empedocles is cited as having given a cosmological, or more accurately, a protological reason for the viability of ten-month- and seven-month-olds. It is explained by the slower movement of the sun at the beginning of the cosmos' development: fetuses spent but a single very long day in the womb, equivalent now to ten or seven months. The report is confirmed by a text in the Byzantine commentator Tzetzes (the part mentioning the seven-month-olds is missing in 31A66 DK; see further O'Brien 1969, 46–48). (This text is noted by Diels in his *Handexemplar* of *DG*; cf. Oniga Farra 1985.) Proclus also refers to the two favourable lengths of time, and adds that eight-month-olds are not viable according to Empedocles, citing arithmological reasons. Like Tzetzes Censorinus only associates the poet with the viability of seven-month olds. On this doxa see also Parker (1999) 522 n. 31.

(2) In the next doxa A cites the first cent. BCE astrologer Timaeus (called *mathematicus* by Pliny *Nat.* 5.55) on the viability of twelve-month olds (if the identification is correct, he is one of the most recent authors cited in the *Placita*). Timaeus does not raise the possibility of mis-counting in relation to these, but only to the seven-month-olds, which may in fact have been in the womb longer. The possibility of mis-counting is also raised by Aristotle *HA* 7.4 584b20–25 for eleven-month-olds and by Pliny *Nat.* 7.40 in a story about the

purposed birth of a thirteen-month-old fetus. The author of the work in the *Corpus Hippocraticum* entitled *De septimestri partu* (not to be confused with the treatise attributed to Polybus) appears to admit the viability of eleven-month- and twelve-month-olds, but gives no details. It should be noted that Timaeus is not credited with any astrological reasons for his view (in contrast to §6), but mentions only the biological evidence of the female menses. (On the textual difficulties at the beginning of the lemma see below, section D(d) detailed comments. Although the alternative reading in P^B is attractive from a systematic point of view, it does not cohere as well with the remainder of the doxa.)

(3) The third doxa adds the viability of eight-month olds to those of seven, ten and twelve already mentioned. The mention of Diocles is consistent with the report of Censorinus 7.6. But the name-label Polybus sits uneasily with the contents of §5, where the doxa is assigned to him alone. If he is to be identified as the author of *De octimestri partu*, then the use of the name-label in this doxa must be erroneous, since its author emphatically denies the viability of eight-month-olds. This is the view of Grensemann (1968b) 58–59. It is possible that the name-label was later added *per errorem* to this doxa, since to have two contradictory doxai starting with the same name-label in the *Placita* is certainly unusual, if not impossible. G has only Diocles and Epicurus (sic!), but Q supports the Byzantine mss., so the name should be retained. We note that this doxa too gives only physiological and empirical grounds for the assertion. For a useful overview of Greek and particularly Latin texts on the viability of eight-month-old fetuses see Waszink 1947, 428.

(4) The next doxa is attributed to ‘Aristotle and Hippocrates and their followers’, the only mention of the father of medicine in Book 5 (and elsewhere only at 4.5.3 on the ἡγεμονικόν). Its contents—that seven-month-olds are viable, eight-month-olds give difficulty, and nine-month-olds undergo the complete process—is consistent with, and perhaps partly based on, Aristotle’s account in *HA* Book 7, but not with the statements that are found in the Hippocratic corpus, and in particular in *Oct.* Grensemann (1968b) 60 nevertheless suggests that the name-label may be based on the attribution of that work to Hippocrates. In a number of texts Galen records that its authorship was disputed between Hippocrates and Polybus (e.g. at *Hipp.Epid.* 2.3.17; other texts cited in Grensemann 1968b, 47–55). In this text too only biological reasons are given. Mention should also be made of a parallel text in the Anon. Bruxellensis 12. Not only does its information clearly derive from *Oct.*, but there are also interesting parallels to the present doxa in A, including details on the perils that eight-month-olds face in obtaining sufficient nourishment. Grensemann (1968b) 64 postulates that both texts derive from a single source. On Hippocratic speculations on the length of pregnancy see further the discussion in Parker (1999) 524–528.

(5) The fifth doxa, attributed this time to Polybus alone, very clearly takes as its starting point the opening words of *Oct.* (if the reconstructions of Littré and Joly are accepted). Seven-month-olds are viable at 182½ days, which is in fact the period from the one solstice to the other (note that the sun here makes a reappearance after §1). This last detail is an interpretative addition, probably by the original formulator of the doxa, since it does not appear in *Oct.*, as is also the case for the statement that it is a six-month period (the term ἑξάμηνον is also not found there), but immediately indicates that babies of this length of time should be reckoned as seven-month-olds. The statement then follows that eight-month-olds are not viable. The following clause starting with ὅταν gives the reason, namely that the umbilical cord is excessively strained. If the conjunction is translated as ‘whenever’ or ‘on condition that’, the doctrine differs hardly at all from §3 and contradicts the tenor of *Oct.* Grensemann (1968b) 57 proposes the solution that it be translated ‘since’ or ‘because’ and we have taken this suggestion over in our translation. The second half of the doxa on the eight-month-olds is most likely based on the statement in *Oct.* 3, although it requires some extrapolation to do so. The famous statement on eight-month-olds at *Oct.* 12 may also have contributed. On the curious doctrine that eight-month-old fetuses are not viable see further Hanson (1987), who gives a rather unconvincing psychological explanation, i.e. that it is invoked as ‘an automatic and perhaps even comforting response to misfortune’ (p. 601).

Significantly there is a close parallel to this doxa (not utilized by Diels) in Clement of Alexandria. As Grensemann (1968a) 58 notes, in three respects the two reports are strikingly similar: (a) in stating the number of days, both A and Clement replace the words προσεόντος μηνίου by the more exact ἡμῖσι; (b) both sources emphasize the period of six months; (c) both sources mention the role of the solstices, which is absent in *Oct.* It can hardly be doubted that there must be a common source. We cannot be wholly certain that this was a doxographical text. But it is noteworthy that Clement also refers to an Aristotelian discussion in a lost work entitled Περὶ φύσεως. Given the presence of Aristotle in the current chapter, this may be an indication that the common source belonged to the doxographical tradition. As in the previous doxa, the considerations put forward belong to the realm of physiology, with the exception of the reference to the movement of the sun.

(6) The final doxa attributed to the μαθηματικοί (i.e. in this context ‘astrologers’) adopts a wholly different approach, as befits that professional group. Eight-month olds are not viable, in contrast to seven-month- and ten-month-olds because of astrological considerations. The argument appears to be that pairs of zodiacal signs, relating—one presumes—to conception and birth, can be either compatible (συνδευτικός) or incompatible (ἀσύνδετος). In the latter case

they obtain dominant planets which have a malevolent influence on the lives of the newly born infants. For eight-month-olds, we are told, the pair of signs are incompatible. As can be seen from the examples given, these pairs involve two signs separated by six others, e.g. Aries and Scorpio separated by Taurus Gemini Cancer Leo Virgo Libra.

A does not explain why these pairs should be ‘ill-starred’, i.e. obtain malevolent planets. To understand the negativity associated with the conjoined pairs, we are aided by Censorinus’ didactic account of the principles of astrology. He adopts a slightly different approach which does not involve any connections to the planets (though they are briefly mentioned in general terms in ch. 8.2). To understand his explanations, it must first be noted that the calculations in relation to the twelve zodiacal signs work by inclusive reckoning, i.e. the number seven links, for example, the 1st and 7th sign, eight the 1st and 8th, nine the 1st and 9th, ten the 1st and 10th. These various relations are regarded as ‘productive’ or ‘unproductive’ depending on the connections formed, as illustrated when traced as straight connecting lines on the zodiacal circle (useful diagrams at Parker 2007, 14–16). According to Censorinus 8.10 the aspect (*conspetus*) from the seventh sign, connecting with the sign directly opposite, is the fullest and most powerful and brings forth seven-month-old children who are already mature, i.e. viable. Though not noted by Censorinus or A, this connection also includes the two solstices of the sun, i.e. the 4th (Cancer) and the 10th (Capricorn). However, the next aspect from the eighth, just like that from the sixth, is unproductive. In both cases, as Censorinus notes, their lines do not form the sides of a polygon inside the zodiacal circle, as does occur for the aspects from the ninth and tenth (triangle and square respectively). This means that eight-month-olds are not viable, but nine-month and ten-month olds are.

Returning to A, we note that he does not include any of the above astrological details in his doxa, but only gives a list of six pairs of signs that are incompatible, each in the eighth aspect (Aries–Scorpio, Taurus–Sagittarius etc. until he reaches Aries again). He then concludes that seven-month-olds and ten-month-olds—but curiously he does not mention nine-month-olds—are viable, but eight-month-olds are not. It must be assumed that they obtain a planet that is malevolent and for this reason do not survive (on this see further our detailed comments below). The astrological doctrines that he assumes are scarcely intelligible as they stand, unless the reader has been initiated into the subject (or has the assistance of a didactic account similar to that found in Censorinus). The astrological doctrines that Proclus cites in relation to the survival of seven-month-olds in his commentary on the famously obscure Platonic text *Resp.* 546a–c (text below on §1 and §6) are even more obscure and do not help us understand A’s text. Although A often uses the name-label *μαθηματικοί* vel

sim., this is the only occasion that it is associated with astrological doctrines; see further our note to the translation of ch. 2.15.

The succession of six lemmata in A's chapter thus yield the following list of views:

- 7- and 10-month-olds—both viable according to Empedocles
- 12- and 7-month-olds—also viable according to Timaeus (though not in fact 7 month olds)
- 8-month-olds—can be viable according to Polybus Diocles Empiricists
- 7- and 9-month-olds—viable according to Aristotle Hippocrates
- 6- (i.e. 7-) month-olds viable according to Polybus, 8-month-olds not
- 8-month-olds not viable, 7- and 10-month-olds viable—according to the astrologers

The overview shows that—contrary to what we would expect—there is little system to be discovered in the sequence of views. It would be improved if we read 9 instead of 12 in §2, but, as we shall see below in our detailed comment, that reading is unlikely to be correct. It would seem that either A or P have not been able to master the diversity of material available to them. This is also shown by the triple reference to the Hippocratean tradition in §§3–5.

It is also of interest, however, to look at the reasons which A gives for the viability and non-viability of the infants. As we noted in section C above, the formulation of the chapter's heading invites the presentation of aetiologies. These can be summarized as following:

- cosmological/protological reasons—§1, §5, §6 (implicit in astrology)
- biological/physiological reasons—§2, §3, §4, §5
- astrological reasons—§6.

It emerges that, as befits the context in Book 5, priority is given to the empirical facts of biology and physiology, with some cosmological and astrological material added. It is most striking, however, that in none of the doxai are arithmological reasons given. This is also the case, as we shall see, in the related ch. 5.21. It would seem that A regards arithmology as inappropriate for the φυσικός λόγος he wishes to present. An exception is made when introducing the Pythagorean number doctrine in A 1.3.7, no doubt because they belong to the ἀρχαί and not to the φύσις proper. A does have a predilection for numbered lists, e.g. at chs. 2.32 and 4.2–3, but this does not extend to arithmological doctrines. It remains surprising that he did not attempt to order the present set of numbers better. Possibly they have been upset by the incomplete transmission of his chapter.

d Further Comments

Individual Points

§1[6–7] It is strange that Diels both in *DG* and *VS* persisted in thinking that γόνιμα is a later addition from the heading. In fact the reading should be retained particularly because of the heading. The infinitive αὔξεσθαι should be taken as depending on the genetive absolute, so it is best to delete the comma after μεμελετηκυίας.

§2 It is not possible to be wholly certain of the text of the beginning of the lemma. G and Q (12 months) are largely in agreement against P^B (not twelve or ten months) and should be followed, also because their reading makes much better sense in the context of the lemma as a whole (see our analysis above). G may have introduced elements of paraphrase, but nevertheless his text should be adopted.

§3 Q reads the words as standing in apposition to the two names and so converts the two physicians into empiricists!

The word ἀτονώτερον in all three witnesses raises suspicion on account of the repetitive phrase διὰ τὴν ἀτονίαν that follows. Grensemann (1968a) 58 confidently states that the emendation ἀγονώτερον must be correct. As a qualification of γόνιμον it certainly makes excellent sense. Grensemann rightly observes that the mistake could have entered the tradition early. The combined weight of the three witnesses generally makes one reluctant to introduce the emendation into our text, but in this clear case preference should be given to the reading with the better meaning.

§4 We have chosen S's reading for the name-labels as the *lectio difficilior*. P has retained the οἱ περὶ formula in A 1.17.2 and 5.19.2. It is more likely that an author would move to the plain name-labels than the other way around. Moreover, it appears to receive support from Q, though he reads Hippocrates in the nominative.

The verb προκύπτω should be translated 'emerge', 'be delivered'; cf. the usage at Porphyry *ad Gaur.* 12.1, 16.5 (3 times), S.E. *M.* 5.66, and Torraca *ad loc.* 'vengano alla luce'. Lachenaud, perhaps led astray by the parallel text at the Anon.Brux. 12 (*ad inferiora loca descendit*) translates 'prend une position basse'. The verb can mean this (κύπτω = 'bend forward'). It may be the origin of the more technical meaning which developed in the present context of giving birth.

It seems that both S and Q have simplified the text and do not explain why the embryo is malnourished. P^B states that this occurs because the ἔκκριμα has become difficult. In G the noun in the phrase is not transmitted in the text. The reading of the text in P^B would appear to make sense if ἔκκριμα means the secretion of nourishment that is transmitted to the embryo through the umbil-

ical cord. The difficulty is that there is no evidence for the use of this rare term in a similar medical context.

§5 The text of the final part of the lemma in P^B is difficult. The editors have resorted to a crux and suggested that the phrase ὡς τούτου τρέφοντος αἵτιος is a gloss. However, in P^G, with the addition of the final words ὁ ὁμφαλός, it is perfectly comprehensible and we have preferred that text. The passage would be even clearer if we follow G in including the participle διατείνομενος after βασινοῦσθῃ as giving the cause of the failure of the umbilical cord. But it is absent in Q and may be an addition on the part of G.

§6 The second sentence explaining the occurrence of incompatible zodiacal signs is difficult and its text may be corrupt. Mau proposes a lacuna after ζῳδία in l. [29]. But it may be possible to rescue the sentence as translated. It would seem that ἀστέρων must refer to heavenly bodies, i.e. planets, that are connected with the incompatible signs. This would deviate from Censorinus' account, which does not mention any planets. The sentence is, it would seem, paraphrased in G, who takes the ἀστέρες that are dominant to be malevolent, as indeed can be deduced from the following sentence. But it is also possible that G's negative term φαύλους indicates that something has fallen out of P's text. The verb οἰκοδεσποτέω is a technical term in both astronomy and astrology for 'exercising predominant influence' and is used of planets; see LSJ and BAGD s.v.

In l. [32] we have emended the text to read the expression (κατ') ὀκτώ, to be taken with the participle ἀριθμούμενα and meaning 'numbered by eight' (by inclusive reckoning). Previous editors have taken the meaning to be that there are eight incompatible zodiacal sign combinations, but only six are mentioned in the text. Even if the combination Libra with Taurus is introduced, as Diels, Mau and Lachenaud do based on the mention of Libra in G (but there stated as incompatible with Pisces), this still only amounts to seven combinations. Censorinus in his astrological explanations does not give these details—he in fact does not mention individual zodiacal signs at all—, so he cannot help us with this text.

In the final sentence it is tempting to take over Diels' suggestion τοῦ κύκλου, i.e. referring to the zodiacal circle, instead of τοῦ κόσμου. But we should recall that A has already introduced a cosmological perspective in §1, and it is also implicit in §4. He returns to this perspective at the end. The expression at the beginning of the doxa, ἀσυνδέτους πάσης γενέσεως, is also very general.

e Other Evidence

Our analysis has shown two significant differences with the more copious account of the subject in Censorinus. The Latin author orders his sequence

of doxai much more systematically than A (i.e. as found in P). In addition, he focuses less on the question of the seven-month and eight-month olds and gives different reasons for the question of their viability. In his initial presentation in ch. 7 he omits any biological or physiological considerations, and only commences with these when presenting the doctrine of Pythagoras in ch. 9–11. Most of the emphasis, however, is placed on arithmological and astrological details (with some musical aspects added as well). Both other close parallel sources, ps.Galen *Def.Med.* and Clement, also include arithmological considerations (which Clement also links with cosmology). These parallel discussions are a further indication that it must have been a deliberate decision on the part of A to avoid this material, despite its great popularity in philosophical circles at the time (for an overview for the use of arithmological doctrines in relation to human life see Mansfeld (1971) 165–178 and see further on ch. 5.21). Another difference is the inclusion of so much material from the Hippocratic tradition, which diverges from what we find in Censorinus and ps.Galen (though not in Clement). This forms a (welcome) exception to what we find in the remainder of Book 5. It may be hypothesized that A or his source was attracted by a dossier on this subject that had become available to him because the subject was so frequently discussed in the biological and medical literature of his time.

A quite different text, yet one that has a number of points of contact with this chapter (and also chs. 5.17 & 5.21) is the excerpt from Damastes introduced above in section B(2). We cite the text in full in E(b) General texts below. It is a purely medical piece, written in the most sparing prose. Its editor Parker fittingly calls it a calendar. Appended to it is a remarkable table, explicitly called a *διάγραμμα*, which summarises its contents. Four possible lengths of pregnancy are listed, from seven to ten months (the eleven- and twelve-month possibilities are simply ignored), and for each the number of days corresponding to six different stages are given: becoming foam, blood, flesh, taking shape, movement and birth. As already noted in our Commentary on ch. 5.17 section C, the stage of giving shape is associated with a (provisional) completion, which by implication is the completion of the formation of the embryo (cf. ch. 5.21). See further ch. 5.21 Commentary D(e).

ps.Alexander *Probl.* 2.47 Ideler Διὰ τί τὰ ἐπταμηνιαῖα βρέφη ζώσιμα, τὰ δ' ὀκτωμηνιαῖα οὐκέτι; ὅτι ὁ ἐπτά ἀριθμὸς, τέλειός ἐστι τῇ φύσει, ὡς μαρτυρεῖ Πυθαγόρας (—) καὶ οἱ ἀριθμητικοὶ καὶ οἱ μουσικοί· ὁ δὲ ὀκτώ ἀτελής (cf. Psellus *Phil.Min.* 1 op. 55, p. 271.6 Duffy). **Genesis Rabbah** 14.2 (trans. Freedman) There is a viable birth at nine [months] and a viable birth at seven [months]. R. Huna said: When the foetus is so formed as to be born at seven months, and it is born either at seven or at nine months, it is viable; if born at eight months, it cannot live. When it is formed so as to be born at nine but yet it is born at seven months, it cannot live, and all the more so if it is born at eight months. R. Abbahu was asked: 'How do we know that when the foetus is fully developed at seven months it is viable?' 'From your own [language] I will prove it to you', replied he: 'Live, seven; go [away], eight'. **Ioannes Doxapatres** *Proleg. in Aphth. progymn.* p. 125.14–16 Rabe ἔστι γάρ τινα καὶ ἱατρικὰ ζητήματα, ὡς ὅτε ζητεῖται, διὰ τί τὰ μὲν ἐπτάμηνα βρέφη ζῶσι, τὰ δὲ ὀκτάμηνα οὐ.

A 2.30.9 Ξενοφάνης τὸν μὲν ἥλιον χρήσιμον εἶναι πρὸς τὴν τοῦ κόσμου καὶ τὴν τῶν ἐν αὐτῷ ζῶων γένεσιν τε καὶ διοίκησιν, τὴν δὲ σελήνην παρέλκειν.

§1 A 2.4.1 Πυθαγόρας Ἡράκλειτος γενητόν κατ' ἐπίνοιαν τὸν κόσμον, οὐ κατὰ χρόνον.

§§2–3 A 1.24.2–3 Ἐμπεδοκλῆς Ἀναξαγόρας Δημόκριτος Ἐπίκουρος καὶ πάντες, ὅσοι κατὰ συναθροισμὸν τῶν λεπτομερῶν σωμάτων κοσμοποιοῦσι, συγκρίσεις μὲν καὶ διακρίσεις εἰσάγουσι, γενέσεις δὲ καὶ φθοράς οὐ κυρίως· οὐ γὰρ κατὰ τὸ ποιὸν ἐξ ἀλλοιώσεως, κατὰ δὲ τὸ ποσὸν ἐκ συναθροισμοῦ ταύτας γίνεσθαι. Πυθαγόρας καὶ πάντες, ὅσοι παθητὴν τὴν ὕλην ὑποτίθενται, κυρίως γένεσιν καὶ φθορὰν γίνεσθαι· ἐκ γὰρ ἀλλοιώσεως τῶν στοιχείων καὶ τροπῆς καὶ ἀναλύσεως γένεσιν(ι) καὶ φθορ(άν), παράθεσιν καὶ μίξιν, κράσιν τε καὶ σύγχυσιν γίνεσθαι.

§4 cf. A 1.3.1 ὅς ἐξ ὕδατος φησι πάντα εἶναι καὶ εἰς ὕδωρ πάντα ἀναλύεσθαι· στοχάζεται δ' ἐκ τούτου πρῶτον, ὅτι πάντων τῶν ζῶων ἡ γονὴ ἀρχὴ ἐστίν, ὕγρα οὖσα. A 1.3.3 Ἀναξίμενης ... ἀμαρτάνει δὲ καὶ οὗτος ἐξ ἀπλοῦ καὶ μονοειδοῦς ἀέρος καὶ πνεύματος δοκῶν συνεστάναι τὰ ζῶα.

§6 cf. A 4.22.1 Ἐμπεδοκλῆς τὴν πρῶτην ἀναπνοὴν τοῦ πρώτου ζώου γενέσθαι τῆς μὲν ἐν τοῖς βρέφεσιν ὑγρασίας ἀποχώρησιν λαμβανούσης, πρὸς δὲ τὸ παρακνωθὲν ἐπεισόδου {τῆς ἔξωθεν} τοῦ ἐκτὸς αἰρώδους γινομένης εἰς τὰ παρανοιχθέντα τῶν ἀγγείων· τὸ δὲ μετὰ τοῦτο ἡδὴ τοῦ ἐμφύτου θερμοῦ τῇ πρὸς τὸ ἐκτὸς ὁρμῇ τὸ αἰρώδες ὑπαναθλίβοντος, τὴν ἐκπνοὴν, τῇ δ' εἰς τὸ ἐντὸς ἀνθυποχωρήσει τῷ αἰρώδει τὴν ἀντεπίσσοδον παρεχομένου, τὴν εἰσπνοὴν. A 5.18.1 Ἐμπεδοκλῆς, ὅτε ἐγεννᾶτο τὸ τῶν ἀνθρώπων γένος ἐκ τῆς γῆς, τοσαύτην γενέσθαι τῷ μήκει τοῦ χρόνου διὰ τὸ βραδυπορεῖν τὸν ἥλιον τὴν ἡμέραν, ὅποση νῦν ἐστίν ἡ δεκάμηνος ... A 5.22.1 Ἐμπεδοκλῆς τὰς μὲν σάρκας γεννᾶσθαι ἐκ τῆς ἰσοκρατείας τῶν τεττάρων στοιχείων· τὰ δὲ νεύρα ἐκ πυρὸς καὶ γῆς ὕδατος διπλασίονι μίχθέντων· τοὺς δ' ὀνυχας τοῖς ζώοις γεννᾶσθαι τῶν νεύρων καθὸ τῷ ἀέρι συνέτυχε περιψυχθέντων· ὅσα δὲ ἐκ θυεῖν μὲν ὕδατος καὶ τῶν ἴσων γῆς, τεττάρων δὲ πυρὸς, ἔσω γῆς τούτων συγκραθέντων μερῶν· ἰδρώτα δὲ καὶ δάκρυον γίνεσθαι τοῦ αἵματος τηχομένου καὶ παρὰ τὸ λεπτύνεσθαι διαχέομένου. A 5.27.1 Ἐμπεδοκλῆς τρέφεσθαι μὲν τὰ ζῶα διὰ τὴν ὑπόστασιν τοῦ οἰκείου ὑγροῦ, αὔξεσθαι δὲ διὰ τὴν παρουσίαν τοῦ θερμοῦ, μειοῦσθαι δὲ καὶ φθίνειν διὰ τὴν ἔκλειψιν ἐκατέρων· τοὺς δὲ νῦν ἀνθρώπους τοῖς πρώτοις συμβαλλομένους βρεφῶν ἐπέχειν τάξιν.

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

The complete chapter with six doxai as epitomised by P is found only in the translation of Q. The fifth lemma in Q is missing in P^B, but is also preserved by G, who also includes the first three doxai (with considerable textual problems). S has a chapter Περί τῆς γενέσεως τῶν ζώων, but in its highly abridged form it contains only two extracts, from Plato's *Timaeus* and Hermes Trismegistus. It is likely that it contained many excerpts from book 5, as indicated in the chapter listing in S^L. However, a second heading at the end of the list is in all likelihood interpolated from P^B (cf. Elter 1880, 73–74). See further below section C.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* As so often in Book 5, by far the best parallel in the proximate tradition is to be found in Censorinus, even though there is an essential difference between the subject matter of the two texts. At the outset of his discussion on human life (ch. 4), the Latin author wishes to present the *opinionones* (i.e. δόξαι) that the old thinkers (*veteres*) had on human origins (4.1). He thus does not treat living beings in general, but only the human ζῶον. There is first a *generalis quaestio* whether human beings have always existed, or whether there was a time that humans did not exist. He then goes on to give a long list of supporters of the first view in the Pythagorean, Platonic and Peripatetic tradition. In the remainder of the chapter he gives the views of the other side. Four of the name-labels here correspond with those in A: Anaximander, Empedocles, Democritus, Epicurus. The remaining two, Parmenides and Zeno of Citium, are missing in A. It would seem that Censorinus has adapted a more general doxography on the origin of ζῶα to the specific case of human beings. A clue to this might be a doxa of Archelaus in Hippolytus, in which 'other animals and humans' are placed side by side; see text below section E(a)§3. We note too that in his account of the Empedoclean doctrine Censorinus emphasises the stages of the process (4.8 *primo ... deinde*) just as we find in A, listing the first three but omitting the fourth.

Remnants of the same doxography are found elsewhere, for example in Lucretius and Lactantius. The question of the eternity of animal species will also have been part of the discussion between Theophrastus and opponents famously recorded by Philo in his *De aeternitate mundi*. This report also includes the lines on permanent generation from Euripides' *Chrysippus*. Philo repeats these lines twice more in *Aet.*, including in the opening doxography on whether the cosmos is generated and destructible or not (*Aet.* 4). Even though he supports the opposite view that living beings had a first origin, Lucretius

paraphrases the same lines to show how they adopt various shapes (text below section E(a)§3). He may well have taken the lines from a doxographical source as it is highly unlikely that they were drawn from Epicurus.

(2) *Sources*. Plato's account of the origin of living beings in *Timaeus* differs entirely from the material in A's chapter (and A does not refer to it). Aristotle's treatise *De generatione animalium* has the same title as the first part of our chapter's heading. Convinced of the view that the species are eternal, however, he does not deign to argue in detail against the Presocratic view that they had an origin in the evolution of the earth. There is only a brief reference to the theory of earth-born living beings at 3.11 762b29 (and note also the polemic at 1.18 722b19 and in *Phys.* 2.8 against any kind of 'evolutionary' thinking, with pointed reference to terms from Empedocles' account). Our chapter as we have it thus contains essentially a Presocratic discussion, with Epicurus following his atomist predecessors. For scholarly treatment of early ideas on the origins of life on earth see Guthrie (1962–1981) 2.200–216, 472; Furley (1987) 76–78; Campbell (2003) 330–335 (list of texts on the theme); Naddaf (2005; highly speculative, see the review of the earlier French language edition (1992) by Mansfeld 1997); Wright (2008), esp. 420–427; Betegh (2016).

C Chapter Heading

A long tripartite chapter heading is found in P^B, supported by P^Q. It is not found in the chief mss. of S, but the first part only is listed in S^L. (A second heading in its fuller form is found at the very end of the list, to which we return below.) In contrast, G only preserves the second and third parts. It is thus virtually certain that the long heading is original. The second and third parts are clearly meant to elucidate the first. The second part might be interpreted as follows: everyone agrees that ζῷα have an origin, but what kind of origin is this, a birth in absolute terms or only from members of the same species? This would then correspond to the main diaeresis of the chapter. The final part seems somewhat clumsily attached, but is presumably meant to remind the reader that the topics of generation and destruction are intrinsically linked. We note that in Book 2 A never describes the heavenly bodies as ζῷα, so they are not taken into account in the present chapter; cf. A 2.8.1 where τὰ ζῷα emerge from the earth.

The chapter heading starts off—unusually for Book 5—as the 'umbrella' type with Περὶ and the genitive, but then moves to asking the cause and to the category of quality. We note also that this chapter forms a trio with two others: 1.24 on γένεσις and φθορά in general, 2.4 for the case of the cosmos, and the present chapter for the case of some parts of the cosmos which are seen to be born and perish, i.e. living beings (the question is not asked of plants or minerals, but the development of plants is discussed in ch. 5.26). We have here

the relation between macrocosm and microcosm, so prominent in Plato's *Timaeus*, which plays an important role in the structure of the *Placita* as a whole; see further M–R 2.1.27, 40.

From the formal point of view it can also be noted that the chapter headings of two other chapters in Book 5 contain secondary parts asking a further question introduced by εἰ: ch. 5.20 Πόσα γένη ζώων καὶ εἰ πάντα αἰσθητὰ καὶ λογικά; 5.26 Πῶς ἡῤῥήθη τὰ φυτὰ καὶ εἰ ζῶα. Other chapters have headings in which the main question is introduced by εἰ, i.e. chs. 5.4, 5.5, 5.15. Headings of this type readily welcome a structure in terms of a diaphonia; see further Introduction to Book 5, section 4.

As noted above, in the pinax of S^L at Γ 10 the heading of this chapter is cited twice. The first, Περί τῆς γενέσεως τῶν ζώων, is the main heading of *Ecl.* 1.42, hence its appearance under Γ in the pinax. A similar heading is found in Photius' index. The other heading appears at the very end of the list and is identical to the formulation in P^B. Elter (1880) 74 concluded that, given this redundancy, the second of these headings must have been interpolated from P^B. It is the strongest evidence that such a process of interpolation did indeed take place. On the chapter headings in S^L see further above ch. 5.4 Commentary C.

D Analysis

a Context

The two chapters on living beings in general, 5.19 on their origin and 5.20 on their genera, interrupt the sequence of chapters on fetuses and their development. They would have been better placed at the beginning of the Book, e.g. after 5.2 (compare the general structure of Censorinus' account of the origin of human beings, as noted above in section B).

b Number–Order of Lemmata

Given the more extensive parallel material in Censorinus, it is unlikely that we have the chapter in a complete form. For example, one would expect A to have had an equivalent of the Stoic doxa in Censorinus (4.10).

c Rationale–Structure of Chapter

The chapter begins with two antithetically formulated doxai. Together they present a diaeresis outlining the two main positions held on the chapter's main subject. In both cases a correlation is made with the view held on whether the cosmos in its totality is generated or not. For those who hold that the cosmos is generated, i.e. had a beginning in or of time, it is obvious that living beings will also have had a temporal origin and will at some time in the future perish. This was the view held (in different ways) by various Presocratics, including the

atomists, and by the Stoics (cf. A 2.4.7–8, 11–13) and Epicureans. The terms γενητός and γενητά need not necessarily have this meaning (Platonists for example could give them another meaning, cf. also A 2.4.1), but this is the obvious interpretation.

The text of the second doxa is problematic on two grounds. P^B reads ἀγένητα, i.e. following on from the mention of ζῶα in the previous doxa. This reading, however, completely destroys the symmetry with the first doxa. The reading which must have been present in P^Q, ἀγένητος (sc. ὁ κόσμος), is to be preferred: it is not contradicted by G, who—no doubt distracted by the name-label—completely recasts the doxa, not unintelligently combining the first two doxai. The name-label οἱ περὶ Ἐπίκουρον is also certainly wrong, even though it is recorded by P^B and Q and altered to the simple name by G. Epicurus cannot be associated with this view, as is demonstrated by §5 later in the chapter (cf. also A 2.4.13). It is not entirely impossible that A made an egregious error. It is also quite possible that a scribe changed another name-label, e.g. οἱ περὶ Ἀριστοτέλη. In our view, however, the most likely explanation is that the name-label was originally a gloss on the first doxa, and that it somehow became part of the text of the second. On the text see further below section D(d). The living beings in this view are thus ἀγένητα, not because they do not die, but because the species is preserved through the process of reproduction.

The third doxa, a well-known quote from Euripides here also associated with his teacher Anaxagoras, illustrates the second of the two options. Excellent parallels for the use of a brief poetic quote are found in A 1.30.1 (Empedocles) and 2.19.3. As noted above, Philo cites these lines three times in *Aet.*, twice in arguments supporting the view that the cosmos is ἀφθαρτος. In *Aet.* 5, however, it is cited in conjunction with a quote from Empedocles (31B12 DK) to illustrate that absolute destruction into nothingness cannot occur. In fact the three lines from Euripides could also illustrate the initial doxa (as in Lucretius), but here they more naturally support the second view.

The three remaining doxai in three different ways illustrate the first view in the diaeresis that there was a beginning of γένεσις for living beings on earth (the location is implied in both §4 and §6). There seems little systematic difference between the views of Anaximander in §4 and those of the atomists in §5. Both stress the role of moisture, probably on an analogy of creatures arising out of mud (the theory of spontaneous generation, cf. Aristotle *GA* 3.11 762b12). The Empedoclean doxa in §6, with its four generations of living beings, is much more complex and for this reason comes last. Here too a special role is accorded to the mixture of earth and water, but by the fourth generation they are being born from each other, i.e. the process described in the poetic quote.

In relation to these three doxai the following should be noted:

(1) A at no stage indicates that the primary focus in this chapter is on human beings (as we find in Censorinus, Diodorus Siculus and other parallels). This is in contrast to the anthropological emphasis that is prevalent in most of Book 5. A text in Plutarch *Symp.* 730E (12A30 DK) indicates that for Anaximander it was human beings who were born out of the bark-en clothed fish, but this detail is not included in the *Placita* as it has come down to us.

(2) Also absent is any mention of the role of 'mother earth', which is so prominent in Lucretius, Censorinus and many other texts. In fact A avoids any reference to mythical or theological aspects of the theme.

(3) As so often, A shows his predilection for exotic Presocratic material, differing from the dominant views on the subject held in his own time which he apparently does not include (but may be missing).

(4) The reader is left to infer that the final three doxai illustrate the first position in the initial diaeresis. The connections are much more clearly set out in the more discursive account in Censorinus.

d Further Comments

Individual Points

§2 Although there are some cases of unanswered μέν in A (see above on A 5.12.1–2), in this case it is justified to introduce the usual corresponding δέ, if we are correct that the name-label is an inserted gloss. It would have been dropped because it is not good Greek style to have μέν after five initial words.

§3 An editor must always exercise extreme caution in emending a quote in a text of which the original is still extant or which is known from other sources. The aim is to reproduce the text as included by A (or P), not whatever the original text might have been. However, the text is so damaged in P^B that we cannot use his evidence, whereas the text in G and Q's translation support a version close to what we find elsewhere. But we cannot be certain of the final verb. We follow Diels in restituting ἀπέδειξεν, which is the reading in the four citations in Philo. It is to be noted, however, G has ἐπέδειξεν and this reading is also found in Clement *Strom.* 6.24.4. Unfortunately Q cannot help us here. On the other hand, Valckenaer's metrically correct emendation πρὸς ἄλλου should not be accepted for our text (we also find πρὸς ἄλλο in all of Philo's quotations). On the various versions of the quotation elsewhere see Kannicht (2004) 881.

§5 This doxa has not been included by any previous editors (Diels adds it in the apparatus criticus at the end of the chapter), even though there is incontrovertible evidence in P^Q and G that it was originally present in P. The evidence in P^Q indicates that originally there were two name-labels, of which one was dropped by G (it is unlikely that it was added by Q). The exact text, however,

cannot be determined. It is corrupt in G and quite different in Q. We have printed the text as reconstructed by Luria with little confidence. The two datives in succession are particularly awkward.

§6 It is plain that A has taken over a systematizing account of Empedocles' complex conception of the origin and development of living beings (including humans). How it relates to the two cycles of cosmic change has given rise to much discussion; see Guthrie (1962–1981) 2.200–211, O'Brien (1969) 189–200, 230–233. The extant fragments related to this doxa are 31B60–64. A striking Empedoclean term that A has taken over is *όλοφυνίς* (31B62.4 DK, also selected for emphasis by Aristotle *Phys.* 2.8 199b9). In fact, however, this is an emendation by Karsten and Diels of the *άλληλοφυνών* in P^{BQ}. The emendation is justified in our view because the original reading clearly belongs to the fourth generation (*δι' άλλήλων*), not the third. Another contentious emendation is Diels' suggestion *στοιχείων* for *όμοίων* in line 5, which has been rejected by most scholars. But it is now supported by the reading of P^Q and has been accepted by Primavesi. It not only makes excellent sense, but is also supported by the references to earth and water in A and to fire and moisture at Cens. 4.8. This lemma is a classic illustration of the value of using Q as supported by Censorinus for the constitution of the text (G alas does not retain the doxa). Various emendations were impressively anticipated by Diels and earlier editors, and have also been accepted by Primavesi (following Mansfeld's earlier edition) in his recent edition of the testimonia and fragments; see Mansfeld–Primavesi (2011) 456, 536. The text recently published in Laks–Most 5.494–496 is rather conservative, refusing most suggested emendations and neglecting the evidence of Q. For details see the apparatus criticus above and the comments of Mansfeld (2018f) 529–531.

e Other Evidence

The chapter is an excellent example of how a theme, which was the object of considerable discussion in the early period of Greek philosophy but received less attention in A's own day, has filtered down—via the Peripatos and the Hellenistic schools—to the collection of the *Placita*. Items are missing which we might have expected to be present, e.g. lists of name-labels for the main diaeresis (such as are found in Censorinus) and doxai presenting the views of Plato, Aristotle and the Stoa (and a full account of Epicurean views, such as in Lucretius Book 5). The incomplete state of transmission may be responsible for this. Despite the poor state of the text, the systematics of the main diaeresis and the relation to it of the remaining doxai are easy enough to reconstruct. As noted above, the chapter reveals some interesting features, in particular the lack of attention to human origins (and *a fortiori* questions relating to the

development of human culture, which is regarded as falling outside the φυσικός λόγος) and the usual interest in exotic material dating back to early Presocratic authors. The exceptionally long doxa of Empedocles gives us some idea of the extent of the material collected at some stage of the doxographical tradition. The long doxai attributed to the same thinker which follow at A 5.22.1, 5.26.4 and 5.27.1 are clearly derived from the same kind of summary; see further Introduction to Book 5, section 5. A particularly interesting feature of A's summary is that it so clearly outlines the stages of the zoogony. This is paralleled in Censorinus 4.8 as noted above in section B(a), but not as clearly as in A. Note also the comment on A 1.15.7 Commentary D(d)§7 on the differentiation of the living beings according to the four primary colours. This is attributed to the Pythagoreans, but we argue that it must go back to Empedocles. Finally, we might note that A does not take into account the possibility of spontaneous generation, as articulated in a diaphonia at ps.Aristotle *Probl.* 10.13 892a23–30 and 10.65 898b4–11 (cf. already Aristotle *GA.* 1.1 715a18–25). In the former text the analogy is drawn with the process of generation that occurred at the beginning through the great changes of the cosmos and universe, as described by 'those who write about nature', i.e. the kind of material included in A's chapter. See further Flashar (1991) 512–513, who rightly observes that this analogy from the earliest times is not found in Aristotle.

E Further Related Texts

a Proximate Tradition

General texts: Censorinus 4.1–11 (on the origin of the human race) *quoniam aetas a die natali initium sumit suntque ante hunc diem multa, quae ad hominum pertinent originem non alienum videtur de iis prius dicere, quae sunt natura priora. igitur quae veteribus de origine humana fuerint opiniones, ex his quaedam breviter exponam.* (2) *prima et generalis quaestio inter antiquos sapientiae studiosos versata est, quod, cum constet homines singulos ex parentium seminibus procreatos successione prolis multa saecula propagare, alii semper homines fuisse nec umquam nisi ex hominibus natos adque eorum generi caput exordiumque nullum extitisse arbitrati sunt, alii vero fuisse tempus, cum homines non essent, et his ortum aliquem principiumque natura tributum.* (3) *sed prior illa sententia, qua semper humanum genus fuisse creditur, auctores habet Pythagoran Samium (—) et Ocellum Lucanum (48.2 DK) et Archytan Tarentinum (—) omnesque adeo Pythagoricos (—); sed et Plato Atheniensis et Xenocrates (F 164 Isnardi Parente²) et Dicaearchus Messenius (fr. 47 Wehrli, 53 Mirhardy) itemque antiquae Academiae philosophi non aliud videntur opinati; Aristoteles quoque Stagirites et Theophrastus (fr. 185 FHS&G) multique praeterea non ignobiles Peripatetici idem scripserunt, eiusque rei exemplo dicunt, quod negant omnino posse reperiri, avesne ante an ova generata sint, cum et ovum sine ave et avis sine ovo gigni non possi.* (4) *itaque et omnium, quae in*

sempiterno isto mundo semper fuerunt futuraque sunt, aiunt principium fuisse nullum, sed orbem esse quendam generantium nascentiumque, in quo unius cuiusque geniti initium simul et finis esse videatur. (5) qui autem homines aliquos primigenios divinitus naturave factos crederent, multi fuerunt, sed aliter adque aliter haec existimatione versarunt. (6) nam ut mittam, quod fabulares poetarum historiae ferunt, homines primos aut Promethei molli luto esse formatos aut Deucalionis Pyrrhaeque duris lapidibus enatos, quidam ex ipsis sapientiae professoribus nescio an magis monstruosas, certe non minus incredibiles rationum suarum proferunt opiniones. (7) Anaximander Milesius (12A30 DK) videri sibi ex aqua terraque calefactis exortos esse sive pisces seu piscibus similima animalia; in his homines concrevisse fetusque ad pubertatem intus retentos, tunc demum ruptis illis viros mulieresque, qui iam se alere possent, processisse. Empedocles (31A72 DK) autem egregio suo carmine, quod eiusmodi esse praedicat Lucretius (1.733), 'ut vix humana videatur stirpe creatus', tale quiddam confirmat: (8) primo membra singula ex terra quasi praegnate passim edita, deinde coisse et effecisse solidi hominis materiam igni simul et umori permixtam. cetera quid necesse est persequi, quae non capiant similitudinem veritatis? haec eadem opinio etiam in Parmenide Veliensi (28A51 DK) fuit pauculis exceptis ab Empedocle dissensus. (9) Democrito vero Abderitae (68A139 DK) ex aqua limoque primum visum esse homines procreatos. nec longe secus Epicurus (fr. 333 Usener). is enim credidit limo calefacto uteros nescio quos radicibus terrae cohaerentes primum increvisse et infantibus ex se editis ingenitum lactis umorem natura ministrante prae buisse; quos ita educatos et adultos genus hominum propagasse. (10) Zenon Citieus (SVF 1.124), Stoicae sectae conditor, principium humano generi ex novo mundo constitutum putavit primosque homines ex solo adminiculo divini ignis, id est dei providentia, genitos. Commentary

A Witnesses

P^B and Q record five doxai, of which only two are retained by G. A tiny papyrus snippet confirms the readings of the P tradition for some lines in §§4–5. The remains of S contain the text of §1, preserved because of the name-labels Plato and Aristotle. Differently from the previous chapter *Ecl.* 1.42, the mss. FP also preserve the chapter heading, on which see further below Commentary C.

B Proximate Tradition and Sources

(1) *Proximate tradition.* We have found no relevant texts in this tradition on the number of genera of living beings. An exception might be made for a possible relation of the final doxa to Theophrastus' *De sensibus*; see below, section D(e).

(2) *Sources.* It is remarkably difficult to find any discussion of the number of genera of living beings outside the extant texts of Plato and Aristotle and the literature that is dependent on them. This is in contrast to the numerous discussions on the correlation between the elements (four or five), on the genera of living beings and on their location in the regions of the cosmos (see

texts below section E(b) General texts). Many discussions are found on whether living beings other than humans possess sense-perception (rarely denied) or reason (highly controversial, particularly between Stoics and Academics). The material recorded in the *Placita* is unusual and there are few parallels. The first part of the chapter appears to take Plato's *Timaeus* as its starting-point and is a fine example of the influence of early Middle Platonism on the redaction of the *Placita*. It is well paralleled in the long doxa on Plato's theology at A 1.7.22 (on which see Commentary ad loc.).

C Chapter Heading

The chapter heading has two components and may combine two separate chapters in the anterior tradition (other possible examples of this development at chs. 2.3, 2.19, 4.20, 4.23). The use of πόσος indicates the category of quantity, though no numbers are found in the body of the chapter. It is found in a number of chapters elsewhere in the *Placita*: cf. chs. 3.9 Περί γῆς καὶ τίς ἡ ταύτης οὐσία καὶ πόσαι; 3.14 Περί διαιρέσεως γῆς καὶ πόσαι εἰσὶν αὐτῆς ζῶναι; 4.10 Πόσαι εἰσὶν αἰσθήσεις; also G ch. 6 πόσα μέρη τῆς φιλοσοφίας. The second part of the heading links up with themes in Book 4, esp. chs. 8–11. On headings with εἰ see ch. 1.1 Commentary C and 5.4 Commentary C.

As noted above in section A, the heading of this chapter is preserved in the chief manuscripts of the *Eclogae*. It is also preserved in the pinax of S^L, this time under the number Γ 11, and here too it is followed by the words ἐν ᾧ καὶ ταῦτα, after which the headings of chs. 5.21–23 are cited. Elter (1880) 74–75 argued that these were interpolated from P (their formulation is almost identical to what is found there), and in this he was followed by Wachsmuth in his edition. See further our discussion on the headings in S^L at ch. 5.4 Commentary C, and also section C in the Commentary on chs. 5.21–23.

D Analysis

a Context

The chapter belongs together with the previous chapter, 5.19 on the generation of animals. As noted in our comments on that chapter, they interrupt the sequence of chapters on fetuses and their development and would have been better placed at the beginning of the book, before the chapters on spermatology.

b Number–Order of Lemmata

The number and order of the five doxai must be accepted. It is perhaps surprising that no Stoic views have been preserved, particularly in the second group of doxai, §§3–5. This part of the chapter is very likely to be incomplete.

c Rationale–Structure of Chapter

The chapter is divided into two parts, corresponding to the two subjects combined in the chapter heading.

(1) The first part consists of two doxai presented in a diaphonic opposition. The first doxa, based on the doctrine of Plato's *Timaeus*, lists four genera of living beings. The terminology for these is precisely that which is set out in the key text *Tim.* 39e10–40a2. The doxa adds that the stars are stated to be ζῶα, as are the cosmos and God himself. The inclusion of God (on the text see detailed comments below) is perhaps surprising. Nowhere in the *Timaeus* is the Demiurge called a ζῶον. The same can be said for the World Soul. Only the intelligible world is described as such in *Tim.* 31b1 and 37d1. But we may adduce a similar view in the presentation of Plato's theology in *A* 1.7.22, where the heavenly bodies, earth and entire cosmos are called τοῦ πρώτου θεοῦ ἔκγονα. The equation of the demiurge with the first god is common at the turn of the millennium when the movement of Middle Platonism commences; cf. Opsomer (2005) 53, citing *Plac.* 1.7.31 Diels (i.e. 1.7.22 M–R). The highest god is generally identified as a νοῦς, but sometimes as a ψυχή, i.e. equivalent to the World Soul; cf. Opsomer *ibid.* 63. But identification with a ζῶον is not part of Middle Platonist theology. Perhaps we have here the influence of Aristotelianism and esp. the famous statement at *Met.* Λ.7 1072b28. However, there is quite a difference between the Aristotelian description ζῶον αἰδίων ἄριστον and the phrase ζῶον λογικὸν ἀθάνατον in our text here. The latter in fact suits the World Soul better than the Demiurge, who is intellectual rather than rational and eternal rather than immortal (but he can hardly not be a ζῶον). The subject of whether the heavenly bodies are alive is not treated in Book 2, but it is mentioned in the prooemium of the work; see further our comment at ch. 1.prooem. A(3).

Despite the name-label at the beginning, the tenor of the doxa as a whole is not Aristotelian. The division of animal genera that underlies Aristotle's biological works is quite different, as emerges in *GA.* 2.1 and *HA* 1.1. But in the Aristotelian corpus as we now have it we are missing a more general philosophical account of the kinds of living beings. The present text has been included by Walzer (1934, fr. 22) and Ross (1955, fr. 22) in collections of the fragments of the lost *De philosophia*, presumably because of resemblances to Cicero *ND* 2.42–44 which they both include as well (none of these texts were included by Rose in his collections; Mansfeld 2016a, 300 argues against Walzer's inclusion). One would expect, given the Platonic precedent, that Aristotle with his doctrine of five elements would have five genera of animals rather than Plato's four. Cf. Baltes (1978), who treats a similar problem in the Stoa, namely five senses divided over four elements.

The second doxa attributed to the atomists Democritus and Epicurus introduces an opposition to the last part of the previous doxa on the heavenly bodies. It is denied that they are animate, a doctrine consistent with the atomist view that they are hot rocks; cf. ch. 2.13.5 and the explicit denial that the heavenly bodies have mind, feeling and life in Lucretius *DRN* 5.110–145.

(2) The second part of the chapter is more difficult. It treats the question whether all living beings possess sense-perception and reason (*logos*). But the three doxai cover the subject only very partially and it is hard to see clear lines of argument in the positions disclosed. Diels and later Kranz despaired of finding sense in the text of §3, followed by Curd (2007) 122. If we accept the emendation to *πορφορικόν* (on which see the further comment below), this would mean that all living beings have a *logos* which enables them to act, but they lack articulate expression to indicate the motivation of the action. But this interpretation makes it rather similar to the following doxa, §4. The subject is now confined to irrational living beings, i.e. animals, and the view is attributed to Pythagoras and Plato that living beings (apart from human beings, one presumes) are rational, but cannot offer articulate speech because of their bodily composition. Burkert (1972) 75 argues that this view cannot go back to early Pythagoreanism, perhaps rightly. But the two philosophers are connected by their views on reincarnation and one wonders whether this doxa might not be a fanciful extrapolation from Plato's myth at *Laws* 620a–d, where the soul of Thersites takes on the body of a monkey (on the absence of the doctrine of reincarnation in A see further ch. 5.25 Commentary B). One would expect a Stoic doxa to be opposed to this view, because the Stoics took the view that animals did not possess *logos*, as opposed to human beings; cf. *SVF* 2.725 ff. Because of the lack of clear opposition between §3 and §4, it is likely in our view that the text of the former has been corrupted at some stage.

The final doxa, §5, implicitly attributes virtually the same doctrine to Diogenes of Apollonia. Animals share in the substance of air which enables thought, but because of bodily interference (through density, i.e. earthiness, or moisture, i.e. water) their faculty of thought cannot function properly. The statement that they do not think or perceive seems extreme, since sense-perception is one of the main characteristics that distinguishes animals from plants (cf. for example 5.26.2). Laks (2008) 169, citing Ritter, attempts to rescue the meaning by regarding the statement as qualified by what follows, i.e. they are like madmen, and so cannot think or perceive *properly*, i.e. as humans do: '... on doit en conclure que si les animaux et les personnes prises de folie peuvent être considérés comme dépourvus des facultés cognitives, c'est par rapport à l'exercice normal de ces fonctions chez l'homme. Ne pas bien percevoir, c'est ne pas percevoir du tout.' Laks goes on to suggest the absolute 'negation' of

thought and perception can be explained in the context of the entire chapter as representing a position that is diametrically opposed to that of Plato and Aristotle (namely in §1) who posit the existence of eminently rational living beings, i.e. the stars and the cosmos. However, the subject αὐτά follows on from the καὶ τῶν ἀλόγων ζώων in the previous lemma (§4), so a direct contrast with the more general treatment of living beings in the first lemma cannot be intended.

The three doxai thus do not give clear positions on the question at issue and certainly do not yield an illuminating diaeresis. They are most definitely unsuitable for giving an overview of the rich philosophical debates on whether animals possess reason or articulate communication, such as we find in Philo *De animalibus*, Plutarch and Sextus Empiricus (some illustrative texts cited below section E(b)§§3–4); on these debates see Boys-Stones (2018) 298; on Plutarch against the Stoics, Newmyer (2015) 226–231.

d Further Comments

Individual Points

§1 The agreement of P^{GQ} with S makes the reading Πλάτων καὶ Ἀριστοτέλης quite certain. It is an indication of a mistaken fixation on P^B that Mau and Lachenaud (but not Diels, even in his left column) retain the corrupted reading ἔστι πραγματεία Ἀριστοτέλους ἐν ᾗ. The final part of the doxa has also been corrupted. A reference to ‘God’ is missing in P^{BG}, but it is preserved in P^Q. The mss. of S only speak of the ‘divine’ (ἐνθεον). The question is whether there are two entities described as a ζῶν here, i.e. the cosmos and God, or that originally only one was meant, i.e. the cosmos. Diels thought the latter and conjectured καὶ τὸν ἐνθεον. However, in all four texts καὶ occurs after τὸν κόσμον, so the balance of probability is that the text refers to two entities. One wonders too whether a text influenced by Middle Platonism would call the cosmos a ζῶν λογικὸν ἀθάνατον. We therefore follow the text in P^Q and already conjectured by Wyttenbach. Lachenaud proposes to read καὶ αὐτὸν τὸν θεόν, but αὐτὸν is unnecessary and not supported by the mss.

§2 Diels’ proposed conjecture, which he did not place in his text, was inspired; cf. A 5.1.1, 5.1.3; also 1.3.7, 1.8.3. But the verb should be in the plural, as at A 5.1.1.

§3 The text in P^{BQ} suggests an antithesis between the λόγος ἐνεργητικός and the λόγος παθητικός, but it is difficult to see what it denotes. It is surely no coincidence that this is the usual terminology for ‘active’ and ‘passive’ verbs in Greek grammar. We have found no references to the former term in a philosophical context. The emendation to προφορικόν is justified by the final phrase τὸν λεγόμενον τοῦ νοῦ ἐρμηνεία. But to change the former term to ἐνδιάθετον (based on the usual Stoic antithesis, cf. *SVF* 2.135, 223 etc.) is altogether too bold. We take

οίονει νοῦν to be the subject of μὴ ἔχειν rather than its object, as understood by Lachenaud. Torraca (1961) 460 n. 175 proposes the more drastic emendation τὸν δὲ λόγον μὴ ἔχειν τὸν παθητικόν.

§4 Diels' decision to follow the text in P^G νοοῦσι makes better sense of the text (*pace* our view in M–R 1.148) than the reading λαλοῦσι in P^B's text and also fits the spacing in P^P slightly better. Daiber translates *sie reden*, which also seems closer to νοοῦσι, but in his apparatus he states that P^Q's text reads λαλοῦσι.

§5 We follow the text as defended and interpreted by Laks (2008) 168–170. It has a sound basis in the manuscripts. See his comments *ad loc.*

e Other Evidence

The dependence of the final doxa on Theophrastus' treatise *De sensibus*, whether direct or indirect, is important evidence of the connection of the *Placita* with the Peripatetic school. The view on thinking would seem to derive, perhaps not directly, from the report on Diogenes' doctrine in *Sens.* 44 (text below section E(a)§5). But the negative comment with regard to sense-perception, for example, is not found in Theophrastus' work, where Diogenes is recorded as noting that some animals have senses that are better than those of humans (§41). We note too that there are no direct linguistic correspondences (ἰκμάς, for example, becomes ὑγρασία). This example of *Placita* material derived, however indirectly, from the Theophrastean work was one of the very few missed by Baltussen (1993) 264–265.

Commentary

A *Witnesses*

Two lemmata only are found in P^B, G and Q. Oddly Ps cites the part of the Asclepiadean doxa on human males and females at the end of his chapter 117 on health and disease and old age (= A 5.30), attributing the view to Hippocrates instead of Asclepiades. Most likely there is a lacuna in his text. The lines would

have been better placed after §115. S supplies us with no more than a quite different heading, but it is an indication that he did excerpt the chapter. The papyrus snippet published by Barns in part III of the Antinoopolis Papyri (1967) contains the last letter of Asclepiades' name-label and also a misspelling (επει for επι).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* For the subject of this chapter there are interesting but limited correspondences with the doxography in Censorinus. Having in ch. 7 discussed the various lengths of completed pregnancies (cf. A 5.18) he briefly turns at §9.1 to the subject of the time of the embryo's complete formation, i.e. possessing all the features that it will have when it is born. Many philosophers, he writes, have just one set of numbers, as illustrated by the doxai of Diogenes of Apollonia and Hippo. But Pythagoras does it better by having two sets of numbers, one for seven-month olds, the other for ten-month olds (274 days, so really nine-month olds). Articulation occurs in 35 days for the former (very close to the number 36 in A's first doxa), 40 days for the latter. Censorinus explicitly states his source, Varro's book *Tubero de origine humana*; on this work see above, Introduction to Book 5, section 5, and ch. 5.3 Commentary B. Some pages later at §11.7 he explains these figures as part of an elaborate arithmological account. The phrase *infans membratur* is used to describe the process of articulation (cf. διαρθρωσις and διαρθρωθῆναι in the present chapter). No further doxai are given, but it is reasonable to deduce that the theme had been treated in the doxographical tradition before the time of his source Varro. A text in Aulus Gellius in an arithmological context also refers to the subject and mentions Varro (but this time his work the *Hebdomades*), but without reference to any particular philosophers or doctors. The appearance in various reports in Galen and elsewhere of the names Empedocles, Strato and Diocles, all of whom are prominent in Book 5, also suggests that a doxographical treatment of the subject was part of the tradition.

(2) *Sources.* The most important early text on this specific subject which is still extant is found in the work *De natura pueri* under the name of Hippocrates. It is part of the section (ch. 6–10) which Lonie (1981) 176 describes as 'the first coherent theory in Western science of the articulation and development of the embryo'. See further his commentary at 176–186, 190–194, which points out the author's debt to Empedocles and Democritus. In ch. 7 this text gives figures for the articulation of the female and male fetus (42 and 30 days respectively). This would appear to be the figure for the beginning of the process, and is based on observation of miscarriages and aborted pregnancies. The cause of the differentiation between male and female is given at the end of the chapter (7.504.24

Litré), namely that the female congeals and becomes articulated later because its seed is weaker and moister. Lonie p. 190 interprets this to imply a theory of the role of heat in the process which goes back to Empedocles (cf. A 5.7.1 and our comments ad loc.). We note that both these features, differentiation of male and female and the role of heat return in the second doxa attributed to Asclepiades, though the numbers mostly differ (see further below Commentary D(c)). This Hippocratean passage remained influential and its figures are cited by a number of later authors such as Galen and Porphyry (texts below section E(b) General texts).

Aristotle in his discussion of the development of the embryo at *GA* 2.4 does not touch on the specific subject of this chapter, but he does mention it when discussing deformed embryos in *GA* 4.6 775a9–14. He too privileges the role of heat, stating that the difference is caused by the fact (as he thinks) that females have less heat. In *HA* 7.3 583b10–24 he makes some brief observations in his account of human pregnancy. He notes that male embryos aborted before the fortieth day show differentiation, but for females this is not found in embryos up to three months and differentiation does not occur until the fourth month. This is the same figure that is attributed to Asclepiades in §2 in the present chapter. Difference of heat is not mentioned in this second account. These Aristotelian texts are cited below in section E(b) §2. The view attributed to ‘Aristotle and Varro’ in Lactantius is divergent, giving only the number 40 without distinguishing between the sexes; text at section E(a) §1. This report is likely to be derived from Varro himself.

Additional material is found in divergent reports on the views of Empedocles (cf. §1), which are found in a text derived from the first cent. BCE or CE medical writer Athenaeus of Attalia (with exactly the same number 36 expressed as four enneads) and in another arithmological passage in Theon of Smyrna (seven weeks, but according to others five weeks for males). These parallels are not very close to what we find in A, but again indicate a broader range of treatment of the subject than what has come down to us in A’s doxography. On the similarities and differences with the embryological calendar of Damastes see further below section D(e).

C Chapter Heading

The formulation of this chapter heading, asking for a time span within which, i.e. relating to the category of time, is unique in A. The closest parallel is on the year and the times of the revolutions of the planets at ch. 2.32, esp. its phrase πόσος ἐκάστου τῶν πλανητῶν χρόνος. The key verb μορφοῦται recalls the chapter heading of Athenaeus of Attalia recorded in Oribasius (text below section E(b) §1), Περὶ διαμορφώσεως. From the contents of the doxai, however, it is clear that

the question asked is the length of time from the first visible articulation (διάρ-θρωσις) to the complete articulation of the parts of the fetus.

The heading is found in two different formulations in the pinax of S^L, the former under *Ecl.* 1.42, the latter under 1.43. We follow the view of Elter that the former goes back to S, whereas the latter is interpolated from the tradition of P. See further chs. 5.4 Commentary C and 5.20 Commentary C.

D *Analysis*

a Context

The chapter is the final one devoted to questions of embryology. It might have been better placed if it had followed ch. 18 because the main focus is on human embryos. However, the second doxa does mention the formation of the embryos of irrational living beings, so this may be the reason that it was placed after to the two chapters on living beings in general, chs. 5.19 and 5.20. As noted above, Censorinus sees a link between the subjects of chs. 18 and 21, but this link is not exploited by our author. A connection can also be made with ch. 5.17, since the distinction between articulation and completion amounts to the difference between the two questions that the chapters pose, the former asking what part of the embryo is formed first, the latter when is the embryo's formation completed; see also our comments at ch. 5.17 Commentary C.

b Number–Order of Lemmata

There are only two doxai. Given the incompleteness of the presentation and the amount of parallel material elsewhere, as noted above in section B, it is likely that what we find in P has been considerably truncated.

c Rationale–Structure of Chapter

The two doxai differ considerably in scope and detail.

(1) The doxa attributed to Empedocles specifies that the answer given to the question relates to human beings (the chapter heading merely speaks about 'living beings', i.e. fetuses), making no distinction between males and females. Articulation begins at 36 days and is completed at 49 days. No comments are made about the numbers and no causes are given. If we consult three parallel texts referring to Empedoclean doctrine we see that none confirm both numbers exactly, though some come quite close. In the excerpt from Athenaeus we read that the whole body is articulated first in 36 days and then complete articulation follows at 40. In Theon of Smyrna the fetus becomes complete in seven hebdomads, i.e. 49 days, though others say five weeks, i.e. 35 days. In Proclus 35 is the figure for seven-month olds. The number 35 for the formation of the embryo is also found in an arithmological text of ps.lamblichus in which Strato,

Diocles and ‘many other doctors’ are cited. In a text in Aulus Gellius based on Varro the numbers are 28 and 49, the latter figure thus agreeing with A’s doxa (3.10.7, but there is no mention of Empedocles). With these numbers there is much room for arithmological speculation ($28 = 4 \times 7$, $35 = 5 \times 7$, $36 = 6 \times 6$, $49 = 7 \times 7$), as is often noted in our sources (esp. Censorinus and Theon; see Mansfeld 1971, 167–168; Lonie 1981, 194 also notes a musical theory in Aristoxenus in which the numbers 30 and 42 are significant). In our text, however, just as in ch. 5.18, A completely avoids any reference to numerical speculation. Athenaeus also reports that Empedocles discriminated between males and females, males being faster because of their greater heat (and their place on the right side of the womb was also hotter). This view is consistent with his theory on the differentiation of males and females through heat and lack of heat in ch. 5.7.1 and the view on the formation of the embryo in 5.21.1, but is not stated in the present doxa. As was noted above in section B, the same view is held by the author of the Hippocratic *De natura pueri*, who may have been influenced by the Empedoclean theory. This aspect too is not mentioned by our doxographer.

(2) The second doxa attributed to Asclepiades (on this doctor in the *Placita* see M–R 1.320, 3.208) is much fuller, differing from the first in three respects: (i) it does distinguish between males and females; (ii) it gives a cause for the difference; (iii) it also reports a view on the subject for living beings other than humans. The numbers for the process of articulation—26 and 50 days for males, two and four months for females—is not exactly paralleled elsewhere. The doxa does not define what completion means in this context. The same four months is the time span that the author of the *De natura pueri* reckons for the onset of movement in the womb in the case of females (text below). In specifying heat as the cause of the difference between males and females Asclepiades continues the tradition initiated (it seems) by Empedocles and the Hippocratic author. See the remarks on the first doxa above.

In this chapter there is thus implicitly a double contrast between the two doxai which it preserves: (1) between human beings (§1) and males and females (§2); and (2) between human beings (§1) and other living beings (§2). It is quite unsatisfactory that the second doxa utilises a theory that goes back to the thinker whose name-label is associated with the first doxa. There is a high likelihood that the information is at the very least incomplete, but probably also inaccurate. We may be fairly certain that the chapter is incomplete compared with its original in A, and quite certain that it is incomplete compared with the fuller tradition. However, because of a lack of evidence (the paucity of parallel material in Censorinus is a handicap) we are unable to estimate what further contrasts it might have had in a fuller form. It is to be suspected that the numbers themselves were not of great importance for our doxographer. He

just wanted to emphasize that there were differing views in differing respects. See further our comment in the next section.

d Further Comments

Individual Points

§1 In the phrase ἐπὶ μὲν τῶν ἀνθρώπων the particle μὲν appears to introduce a contrast between human beings and something else (e.g. the ἄλογα ζῷα in §2), but this does not happen. It could be a case of μὲν *solitarium*, when ‘the antithetical clause is to be supplied in thought’ (Smyth 1956, §2896). As the lemma stands, however, it would be better placed after ἄρχεσθαι, where it would introduce a contrast with τελειοῦσθαι δέ later on. Perhaps this was the intention, but it has somehow been clumsily moved forward. Emendation, however, would not be justified.

§2 Diels (followed by Mau and Lachenaud) was surely not correct in changing the unanimous reading in the witnesses πληροῦσθαι to τελειοῦσθαι in order to conform with the infinitive used twice elsewhere in the doxa. It is natural for the author to strive for some *variatio*. Thus for the beginning of the process of articulation he uses three different phrases—ἄρχεσθαι τῆς διαρθρώσεως, τὴν διάρθρωσιν γίνεσθαι, διαρθροῦσθαι—though admittedly each one uses the same verbal root. For the final verb G again reads τὴν διάρθρωσιν γίνεσθαι, but Ps supports the reading διαρθροῦσθαι in P^B.

The author of *Nat.Puer.* at the beginning of §10 appears to conflate the time that articulation is complete (nails and hair have taken root) and the first movement of the fetus, giving the times at which this occurs as three months for the male and four months for the female. The latter number is the same as given for the completion of articulation for females in the doxa ascribed to Asclepiades. Similar figures, without discrimination between males and females are found in *Vict.* 1.26 (texts below section E(b)§2). As we saw above in section B(2), in the text at *HA* 7.3 583b2–24 Aristotle gives the figures of 40 days for males and ninety days for females in relation to both first movement and articulation of the fetus, but he does not coalesce the two topics. The term he uses for first articulation is σχίζεσθαι (b10), for completion τελείωσις (b24).

e Other Evidence

As noted above in ch. 5.18 Commentary D(e), the recently edited excerpt from the second cent. BCE medical author Damastes gives an extended schema of numbers of days for the development of pregnancy. The question asked about commencement and completion of the embryo’s formation in the present chapter appears to correlate with two of the stages in Damastes’ calendar. But the numbers given in the two doxai, 36 & 49 days, and 26 & 50 and 2 & 4 months

do not cohere well with his numbers: only the number 50 is found in Damastes for the formation of the ten-month old baby. As already noted in ch. 5.18 D(d), Damastes does not mention authorities, and he also does make any distinction between male and female embryos as Asclepiades is reported as doing.

Commentary

A *Witnesses*

The single doxa is preserved in the three witnesses to the P tradition, P^B, Q and G (slightly abridged). For the evidence in S see section C below. The text as found in P^B is in terrible shape, but can be reconstructed with a fair degree of probability with the assistance of Q and G. See the further comments below in section D(d). The archetype from which the Byzantine mss. of P derived must have suffered considerable corruption towards its end. The chapters from now onwards give rise to many textual problems and, in the almost total absence of S, the means of correcting them through the assistance of other witnesses is limited.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* There are no treatments of this subject in the authors of the proximate tradition whose writings we have regularly cited for Book 5 (including Censorinus and ps.Galen *Def.Med*). On the medical doxography of the Anonymus Londiniensis see our discussion below under section B(b).

(2) *Sources.* The formulation and treatment of the subject appear to derive from the Peripatetic tradition. The composition of the parts of the bodies of living beings, including humans, is discussed in both Aristotle's *De partibus animalium* and his *De generatione animalium* (but in the latter only in relation to embryonic development). In both works the Stagirite is very conscious

of his Presocratic predecessors, and in particular Empedocles and Democritus. In a passage at *PA* 1.1 640b4–29 (text below section E(b)§1) he states that the ἀρχαῖοι καὶ πρῶτοι who philosophised about nature were occupied with discovering the material principle and how the universe was formed out of it, and also what set the process in motion in the assumption that the underlying material by necessity had a definite nature, e.g. fire was hot and earth was cold. The bodies of humans and other animals are said to be composed of such substances (note how implicitly Aristotle moves from the macrocosm to the microcosm here). However, he goes on to say, it is necessary to take into account parts such as flesh and bone and blood, and in order to describe them one must include discussion of the shape and form (ἰδέα). A few pages later in the same chapter (*PA* 1.1 642a18–22, text also below) he pays Empedocles a back-handed compliment by saying that when discussing the composition of bone, even he had to talk of its structure (λόγος) and not only of the elements out of which it was composed. He himself recognizes that the four prime elements play a role in the composition of bodily parts, but prefers to speak of δυνάμεις such as the moist and dry etc. rather than στοιχεῖα. In the *De anima* too Aristotle criticizes Empedocles' theory of elemental mixture in relation to the nature of the soul, using the examples of flesh and bone (1.4 408a13–20, 1.5 409b30–410a6, texts below section E(b)§1). Some of the original passages on which these descriptions of Empedocles' doctrine—and also the report found in A's lemma—are based are preserved by Simplicius (31B96, 98 DK; texts below *ibid.*).

But we need to take into account an earlier highly influential account of the origin and composition of the human body and its parts. When Plato in the *Timaeus* describes the origin of bone, flesh and sinews in 73b–74e, he gives the elements a prominent role, starting with the composition of the marrow which is mixed from the finest examples of the four different kinds. It is generally recognized that Plato's account must be read against the background of fifth cent. scientific and medical ideas, and that he was at least partly indebted to Empedoclean ideas in describing the structure of the human frame and its fleshly covering; cf. already Taylor (1928) 523–526.

Plato's account of the human body and its diseases plays a dominant role in the earliest medical doxography that we possess, the *Iatrika* of the text of an unknown author dubbed the Anonymus Londiniensis. This quite long papyrus text of 39 columns was first edited by Diels (1893a) and has been recently brilliantly re-edited by Daniela Manetti (2011; see also her analysis of the work, 1999). The central part of the text is taken up by a long doxography on the causes of diseases with twenty name-labels, the first part of which is devoted to theories based on the residues (περιττώματα) of digestion, and the second part to theories focusing on the constitutive elements (στοιχεῖα) of the body. The lat-

ter section commences with a very long analysis of Plato's doctrine, followed by shorter accounts on the views of five other theorists, including Philolaus and Polybus (cf. ch. 5.18) but not Empedocles and Democritus. In each case the author briefly outlines their views on the role of the elements and the accompanying powers (δυνάμεις) before turning to their explanations of diseases. As can be readily seen in the selection of passages cited below at section E(a) General texts, there is a frequent use of the two main opening formulas found in A (συνιστάναι ἐκ and γεννᾶσθαι). In the explanation of the role of the elements the reports do not focus on their direct relation to the formation of bodily parts to the extent that we find it in our chapter, but they feature frequently in the aetiology of disease.

On the basis of her research Manetti argues that the papyrus is an 'auto-graphous text', in which the author makes use of material from a medical work entitled Ἰατρικὴ συναγωγή circulating in the time of Galen under the name of Aristotle, though it was assumed at that time that it had been written by his pupil Meno. We cannot be certain that this work was written by him or by a later editor of Peripatetic material (see Manetti 1999, 97–99). The possibility that the original author of the doxography was working in tandem with Theophrastus and others in the early Peripatetic period cannot be excluded and that there may thus be a link with what remains of the doxography on this topic in A. Manetti has demonstrated in the above-cited article that the methodology of the work is dialectical, just as is the case for the *Placita*.

An echo of Aristotle's critique is found in ch. 7 of Galen's treatise *De constitutione artis medicae*. For the student, after having learnt from anatomy what all the parts of the body are, the task is then to learn of these what the primary and simplest parts are by nature. Taking flesh as an example, it is impossible for its primary part of be of a single kind, such as the atomists posit, or to consist of the four unchangeable elements as Empedocles wished. Galen uses hypothetical syllogisms to demonstrate his case. If flesh consists of impassible elements, then it cannot feel pain; but it does feel pain, so its constituent elements cannot be impassible, i.e. the elementary bodies as postulated by the atomists or Empedocles. See text cited below section E(b)§1.

C Chapter Heading

The formulation of the chapter heading with ἐκ is unique in the *Placita* (unless we take into account the alternative heading noted in the margin of 2.6 in ms. PB^(III:α) (Ambr. 859), πόθεν ἄρχεται ὁ κόσμος καὶ ἐκ ποίων στοιχείων). The elements are mentioned in a chapter heading elsewhere only in ch. 2.6 on the generation of the universe (not including ch. 1.2 which relates to first principles). There are, however, three chapters which speak of how something is 'composed' (συνέ-

σπηχε vel sim.), namely 1.4 (cosmos), 2.13 (heavenly bodies), 3.16 (sea). Certainly the relation of macrocosm and microcosm plays a role in the background here. The term *ποίων* in the heading points to a quaestio in the category of quality, but the subject of elements means that quantity also comes into the picture, as we see in l. 4. The same heading (but with *μερών* instead of *μορίων*) is found in the listing in the Laurentian ms. of S, but Elter (1880) 74 is no doubt correct in postulating that it has been interpolated from P. This means there is no certainty that S included material from this chapter in his ch. 43 on the generation of living beings. On the chapter headings in *S^L* see above, ch. 5.4 Commentary C.

A possible very slight clue to the direct influence of the Aristotelian texts discussed above in section B is the use of the word *ἕκαστον* in the chapter heading. It occurs but rarely in the *Placita* (an example at A 2.13.14 on ‘each of the heavenly bodies’) and never elsewhere in a chapter heading. Aristotle’s formulation at *GA* 2.6 745b21 which speaks about how ‘each of the parts are composed’ (*ἕκαστον συνίσταται τῶν μορίων*) is highly reminiscent of the expression used in the heading of this chapter. This may well not be a coincidence.

D *Analysis*

a Context

Although the chapter heading speaks of ‘in us’ and not ‘in the womb’, as in the previous chapter, its subject can be seen as continuing the subjects discussed in the embryological chapters 14–18 and 21, since both the developed embryo and the mature human being have for the most part the same bodily parts. It is worth noting that the final doxa in the previous chapter 5.21 speaks both of *μόρια* (in relation to human males) and *στοιχεῖα* (in relation to the irrational animals).

b Number–Order of Lemmata

The single lemma would appear to point to a considerably abridged chapter. But see also the comments in the following sub-section.

c Rationale–Structure of Chapter

The single Empedoclean doxa gives the elemental composition of six parts of the human body—flesh, sinews, nails, bones, sweat and tears. The first four consist of the four primary elements only; the last two are derived from blood (for its composition, an even mixture of the four elements see Theophr. *Sens.* 10 = 31A86 DK). The details have clearly been derived from Empedocles’ poem, though in a somewhat literal and mechanical way. The two verbatim quotes from this part of the poem (31B96 and B98 DK) speak of bones, blood and flesh

with reference to the elements (which are given theophoric names), but the texts do not form the immediate basis of the doxographical report.

The incomplete evidence gives rise to a conundrum. On the one hand it seems almost as if the chapter with its heading has been tailor-made to accommodate the doxa of Empedocles, since, as we saw, later philosophers such as Aristotle scarcely speak in such 'elemental' terms about the bodily parts. On the other hand, the method of the *Placita* scarcely admits a single doxa which is not contrasted with other views. A possible inclusion in this chapter may have been a Platonic doxa based on the *Timaeus*. It remains likely, however, that the doxai would have for the most part presented Presocratic views, such as is the case for preceding chapters 5.19–21.

The relation between macrocosm and microcosm that we observed in the background of this chapter above in sections B and C deserves further consideration. It is implicit in the treatment of the elements in both Plato's *Timaeus* and in Aristotle's biological works. It is also present in the macro-structure of the *Placita* (already noted at M–R 2.40). When the author moves to the ἀποτέλεσματα in the preface to Book 2, he sees various parallels in the questions that can be asked of the heavenly bodies (and also some features of the earth) and of τὰ κατὰ μέρος (introduced in the proem of Book 4), mainly the living beings and plants present on the earth. We noted above the language of 'composition' in various chapter headings: the introductory ch. 1.4, then 2.13 (cf. also 2.6), 3.16, now 5.22. This language is undeniably used by Aristotle. Aside from the terminology of 'composition' noted above, he speaks at *PA* 1.1 640b11 of the philosophers 'generating' the cosmos, the same verb (γεννάω) used in ch. 5.22 of Empedocles 'generating' flesh from the elements. As noted above in section B, this language is also found in the Anonymus Londiniensis. The intriguing question is whether we have to do with Aristotelian influence exerted on the early *Placita* tradition, perhaps via Theophrastus, as we think likely, or whether it is the result of later developments resulting from the revival of interest in Platonism and the *Timaeus* in the first cent. BCE. A similar question can be asked of the use of the term κοσμοποιεῖν in the chapter heading of 2.6; see our Commentary D(e) ad loc.

d Further Comments *Individual Points*

§1 As noted above in section A, the text of the Empedocles doxa as it is found in P^B is highly corrupt but can be reconstructed with a fair degree of probability with the assistance of Q and G. Our text is in general agreement with that of Primavesi in his text in the Reclam edition, which takes over various suggestions by previous editors but goes further in making use of the evidence of

G and Q. It would be possible to go even further in taking over readings from G, e.g. for the fleshy parts in l. 1–2 (ἐκ) τῆς ἰσοκρατείας τῶν τεττάρων στοιχείων and for the tendons in l. 2–3 ὕδατος διπλασίονι μιχθέντων, but in the absence of clear support from Q we have not done this. Other recent editors such as Mau, Lachenaud, Viték, and Laks–Most have been far too conservative in not emending the hopeless text in P^B when the assistance of Q and G is available.

e Other Evidence

It is quite remarkable that a doxa attributed to Empedocles appears in every chapter of 5.18–28 except 5.21 and 5.24, a total of nine doxai in all (six of them stand first in the chapter or are the only doxa that remains). The only parallel for all these doxai in Censorinus is his view on seven-month-olds cited in ch. 7.2. The doxai are based on a ‘doctrinal’ reading of his poem, as is clear from the doxa in the present chapter. How can we explain this extraordinary predilection for the Presocratic poet? To start with, P must have favoured his doxai as shown by the fact that they survived the process of epitomization so remarkably well. Going back a step further, it is likely that A introduced much Empedoclean material. He may have been attracted to doing so because the poet was thought to be a Pythagorean; see for example Theophrastus *Phys.Op.* fr. 3 Diels, FHS&G 227A; Diogenes Laertius *V.P.* 8.54; Hippolytus *Ref.* 6.26.2–3. But from where did he obtain it? There are at least three possibilities: (i) from a direct reading of the poems; (ii) from a summary of Empedoclean doctrine which he divided into doxai and inserted in the various chapters; (iii) from an anterior source which had already included much Empedoclean material that he himself rearranged to suit his own purposes. We know far too little about how A compiled his work, but the third alternative seems to us the most likely. It is worth recalling that Empedocles was already an important source for Lucretius, but in his case he will certainly have read the original, as well as drawing on secondary treatments.

Commentary

A Witnesses

The only evidence is found in the tradition of P (the heading in S^L is most likely interpolated from that tradition, see below, section C). P^B and Q record but a single doxa. Most interestingly, however, P^G breaks this doxa into two and supplies a name-label for the second part. He then adds an anonymous third doxa to the previous two. Given the poor state of preservation of the P tradition for the final part of Book 5, it is not unlikely that G's text is superior. But this will have to be confirmed by the analysis below.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* For this chapter too the most significant parallel is found in the treatise of Censorinus. The link between hebdomads and the development of human beings is treated, first briefly in ch. 7, then at considerable length in ch. 14 (the latter text not noted by Diels). He gives a doxography of the various schemes, attributing them to Varro (his source), then Hippocrates, Solon and Staseas the Peripatetic. It may be surmised, therefore, that A found his material in the doxographical tradition, though there is little specific evidence in the proximate tradition elsewhere. Tertullian's reference to the view of the doctor Asclepiades will have been derived from Soranus' book on the soul, as assumed by Waszink (1947) 433. There is also a strong link to the copious material found on the hebdomad in arithmological literature, which has its own tradition; on this see further Mansfeld (1971) 156–184 and Runia (2001) 278–281, 301–304. It is significant that an arithmological text in Philo *Leg.* 1.10 uses the same terminology of 'completion' as is found in the heading of A's chapter and moreover just like A proceeds only to the third hebdomad. See further the discussions in sections C and D(c) below. See also ch. 5.25 Commentary B on Philo's use of the theme of the ages of life in *Cher.* 114.

(2) *Sources.* In the anterior sources we have found no exact equivalents for the formulation of the question posed in this chapter. However, a number of parallels in the works of Aristotle indicate that it was raised in the earlier tradition. In *HA* at the beginning of 7.1 he introduces the subject of the human being's γένεσις from the womb to old age and emphasizes a little later on the importance of periods of seven years (texts below section E(b)§2). At 582a29 he notes that women are fully ripe for child-bearing at 'three times seven years', but men's reproductive powers still increase after that. In *Politics* 7.17 1336b38–1337a3 he mentions the two hebdomadic periods of human life in which education needs to occur, from seven to twenty-one and adds in characteristic fashion that 'those who divide the ages (sc. of human beings) speak for the most part not badly, but it is necessary to follow the division supplied by nature, for every skill and educative process wishes to supply what nature leaves to be done'. This is a general reference to earlier traditions going back at least to Solon's famous poem (fr. 27 West) and very likely including Heraclitus. No direct quotation on this topic is extant, but it can hardly be doubted that the Ephesian discussed it, together with his views on human generation (fr. 22A19 DK).

C *Chapter Heading*

The witnesses are divided on the first part of the chapter heading. P^B records the composite phrase Πότε καὶ πῶς, which is unique in the *Placita*. The latter interrogative particle asking for the cause is of course common, but surpris-

ingly the former occurs only here, although there is nothing remarkable about a heading addressing the category of time (cf. 5.21 ἐν πόσῳ χρόνῳ). The other witnesses have only one of the two, P^G the former and P^Q the latter. However, the text in S^L supports reading only Πότε. Since this chapter heading is in all likelihood interpolated from P, it tips the scale in favour of that reading. Moreover it is supported by the contents of the chapter, which do not address the aspect of the cause.

As for the remainder of the heading, a text in an arithmological passage in Philo (*Leg.* 1.10, text below section E(a) General texts) speaks of how a human being (ἄνθρωπος) reaches full maturity (ἄκρως τελειοῦσθαι) at the second hebdomad and then explains this τελείωσις in the following sentence. The phrase in the heading ‘commence maturity’ is perhaps a little unusual. Its meaning becomes clear in the first doxa, where it refers to the time that maturity commences as indicated by the beginning of the production of semen. This is illustrated by the case of plants when they start to bear fruit and so produce seeds. (There are a number of texts in Aristotle’s biological works which use the verb ἄρχεται in relation to the process of human development; see references below in section E(b) Chapter heading.) The only other chapter heading which speaks of the beginning of a process is 2.6, Ἀπὸ ποίου πρώτου στοιχείου ἦρξατο κοσμοποιεῖν ὁ θεός, where one of the manuscripts of P records the alternative πόθεν ἄρχεται ὁ κόσμος καὶ ἐκ ποίων στοιχείων. See further our comments ad loc. Finally we note that it is the only chapter heading that explicitly refers to the ‘human being’. The focus of Book 5 on human physiology has already often been noted (see for example our comments on 5.14), but here it is made explicit.

As was the case for ch. 5.22, it is very probably that the heading preserved in the pinax located in S^L is interpolated from P. There is no further evidence that S included the material from this chapter in his Anthology. On the chapter headings in S^L see above, ch. 5.4 Commentary C.

D Analysis

a Context

The subject follows on well from the chapters on embryology and birth in chs. 5.15–19, 21–22 and is the final chapter on the whole process of human reproduction and development. Both ch. 5.17 Τί πρῶτον τελεσιουργεῖται ἐν γαστρὶ and ch. 5.21 Ἐν ποίῳ χρόνῳ μορφοῦται τὰ ζῶα ἐν τῇ γαστρὶ ὄντα can be considered parallel chapters in the embryological context (note the verb τελειοῦσθαι twice in A 5.21.1–2). The subject is approached primarily from this reproductive context and does not touch on the theme of the ‘ages of humankind’ in general. The next chapter 5.24, however, does move on to the subject of death.

b Number–Order of Lemmata

P^B and Q record only a single extended lemma. G divides it into two with two separate name-labels and adds a third. As our analysis below will show, there is a chance that the chapter is complete.

c Rationale–Structure of Chapter

According to P^B and Q the question posed by the chapter heading is given a double answer. The view attributed to Heraclitus and the Stoics is firstly that maturity commences when human beings begin to produce semen at the age of fourteen. The connection between the beginning of human semen production and the double hebdomad is standard in various biological and arithmological texts; see the detailed analysis in Mansfeld (1971) 168–178. Aristotle emphasizes it at the beginning of Book 7 of his *Historia animalium*, where the comparison with plants is also found (cf. also the Stoic comparison of the embryo's growth with plants in A 5.15.2). It is also attributed to Hippocrates by the pseudonymous *De hebdomadibus* and Philo (texts below, section E(a) General texts). On the attribution of the doxa to Heraclitus see section B above. The Stoics pronounced on the question, but they place the emphasis on the development of speech and intellectual skills as couched in the characteristic phrases λόγος προφορικός and λόγος ἐνδιάθετος (cf. 4.11.5, D.L. 7.55, where the verb τελειοῦται is particularly to be noted; cf. our detailed comment on §1 below); see further Mansfeld loc. cit. The arithmological text in Nicomachus seeks to combine various strands in a somewhat confused way and should not be regarded as presenting purely Stoic doctrine.

The text in P^B and Q next rather pointlessly summarizes the doxa so far with the words τέλειος οὖν τότε ἄνθρωπος, the word τότε being repeated from two lines previously. The final part of the doxa then gives an additional development that takes place at (or in) the second hebdomad, awareness of morality. We have found no parallel for this view in the biological and arithmological literature.

The text in G makes much better sense, although no editor (not even Diels) has preferred to take over his version for P (it is included by Marcovich and Mouraviev in their editions of Heraclitus' fragments). Instead of the brief summarizing sentence cited above he just gives the name-label Ἀριστοτέλης. It is likely in our view that a defective ms. tradition caused the sentence to be substituted for the name, i.e. -τέλης → τέλειος. This is at least as likely as that it occurred the other way around. There are two other arguments in favour of G's text. The second view focusing on the first hebdomad forms an attractive diaeresis with the earlier view on the second hebdomad, whereas to have two differing doxai on the second hebdomad is somewhat otiose and one might

expect more than the connecting (or adversative) particle *δέ*, e.g. *ἔτι δέ* as at A 1.1.2, 3.5.3. In addition, the doxa aligns well with Aristotle's discussion in *Pol.* 7.17 which argues that the process of physical and moral education commences at seven years of age when the child ventures outside the home (see 1336b1). The reading *διδασκαλίας ἀρχή* is particularly apposite in the light of this text. As was noted above in section B, at 1336b37 he agrees that division into hebdomads corresponds well to the development of young people and that it goes in two stages, from 7 to 14 and from 14 to 21. Education outside the home begins at 7 and includes moral education from the outset; for this interpretation of the passage see Kraut (1997) 166–168. It might seem implausible that maturity should commence at such an early age, but the view is not impossible if the emphasis is placed on the time of commencement, as additionally indicated by the last word in the doxa, *ἀρχή*. Tertullian's report, which links maturity with the knowledge of good and evil, as happened to Adam and Eve in paradise, supports the connection with moral education, but it is ascribed to the doctor Asclepiades. On the text of this lemma and the fact that the papyrus does not support G, see below, section D(d)§2.

An objection to the above reconstruction of §2 might be the passage at ch. 4.11.1[14–15] in which the view is attributed to the Stoics that the development of the *ἡγεμονικόν* resulting in the acquisition of *logos* is completed at the first hebdomad. As we note in our Commentary on that passage (Commentary D(d) General points (3) and on §1[15]), this does not contradict the view here that maturity occurs with the seminal fluid at the second hebdomad, since that concerns *logos* in the productive sense. The acquisition of *logos*, of course, enables the instillation of moral education. The fact that this view is here attributed to Aristotle should not concern us too much, given the looseness of A's application of name-labels, esp. on a more general topic such as this one.

G then adds a third doxa, of which no trace remains in P^B and Q. But it too makes excellent sense. The identification of maturity with the growth of the beard is taken directly from the already mentioned celebrated poem on the ages of humankind by Solon and is referred to by numerous authors. Aristotle at *HA* 7.1 582a32–33 mentions it in a biological context, but only for a discussion on human development, not maturity. Philo in an arithmological context defines the attainment of the third hebdomad as the *ἀκμή* of human development (*Leg.* 1.10). However, the reference to strength in the final phrase of the doxa is probably taken from Solon's couplet on the fourth hebdomad and so may involve a conflation on the part of the doxographer or his source. Aristotle in the above-mentioned text indicates that male strength develops further after the third hebdomad.

If, therefore, the text is based on the version in G with three doxai, the chapter as a whole makes excellent sense, presenting a diaeresis of three views, one for each of the first three periods of seven years in a human life. The first doxa gives the mainstream view, the other two supplementary and divergent positions. Because of this neat composition, it is tempting to think it complete, but this can only be regarded as a surmisal. Censorinus speaks of the views of doctors and philosophers on hebdomads but doctors are missing in our chapter. Tertullian notes the view (no doubt via Soranus) of Asclepiades which is similar to what we read in §2 (text below section E(a)§2).

Finally, it should be emphasised that, although this chapter contains numbers in the form of the three hebdomads, its emphasis is firmly biological. The periods of seven years are taken as facts of natural development, as witnessed by the production of semen and the comparison with trees. No explanations in terms of the properties of the number seven, which are prominent in arithmological literature are given and also no comparison with other examples of hebdomads. The comparison with the doxography in Censorinus is instructive. The Latin author affirms that of all the thinkers he has cited, those who measure our human life in hebdomads appear to have come closest to nature (§14.7). But he also, as we just noted, adds a long section on ‘the many facts about these hebdomads which doctors and philosophers have entrusted to their books’ (§14.9). None of this is found in the *Placita*. Our doxographer is a good pupil of Aristotle, as he indicates at the outset in ch. 1.1; see there our Commentary D(c), esp. (3).

d Further Comments

Individual Points

§1 The reading ὀρρός or ὀρός is clearly the *lectio difficilior*, because it appears to be only used of milk or blood, not semen. For the latter meaning this text is the single instance given by LSJ. It is retained, however, by all editors. G’s πῶρος provides an alternative, but may well have arisen from a desire to regularize the text (there is an intriguing parallel at Ptolemy *Tetr.* 4.10.8, but it relates to a different arithmological schema of decads which aligns the ages of humankind to the seven planets).

It is worth noting that the combination οὖν τότε appears nowhere else in P^B, which should make us all the more suspicious regarding the short sentence in which it occurs (see above, Analysis D.(c)).

The notion of perfection or completeness (τελειότης) which is central to this chapter is often present in arithmological discussions of the hebdomad. It occurs twice in Solon’s poem (lines 3 and 17). Philo uses the poetic epithet τελέσφορος (literally ‘completion-bringer’) of the hebdomad at *Opif.* 102; note

too the verb *τελειογονεῖσθαι* of infants viable in the seventh and ninth month in §124, also used in *Plac.* 5.17. These terms hints at connections between doxographical and arithmological traditions that are present below the surface, though we cannot be sure of their origin and extent.

§2 The discrepancies between P^B and G are tricky and it is not possible to establish a text that is in any way certain. Because of our conviction that G supplies the better text, we have taken it over integrally in this lemma. Q is not a support for the primacy of P^B, because it clearly depends on the same defective text. But it must be noted that the suggested text is not supported by the papyrus, which clearly reads *τέλειος* and *δευτέραν* as in the transmitted by P^B and witnessed by Q. So his text would not have contained the name-label Aristotle. But a further complication occurs because the letters *ναγ* that survive of the following line cannot be linked up to P^B's text (Barns 1960, 83 in his notes ingeniously suggests *δευτε||ραν [εννοια γινεται του καλου και του ε||ναγ[τιου*, but this is only a guess). If G represents P's (and thus A's) text, the divergence from the mainstream of P's transmission must have occurred quite early.

Marcovich (1966) in a brief note agrees that we should follow G in including the name-label of Aristotle and emending to *πρώτην*, but prefers to adhere to P for the preposition *περί* (twice) and the phrase *καλοῦ τε καὶ κακοῦ*.

§3 If G's additional doxa is accepted, then we have to remove any tell-tale signs of his modifications. *ἔτεροι* is not certainly found as an anonymous name-label in A. At 1.18.3 it is a Stobaeian addition, and this may also be the case at 4.3.10. It is safer to emend to *ἄλλοι*, which is the usual label (cf. 2.32.10, 5.17.6, both with *δέ* as the final lemma). The reading *ἡμᾶς* also gives rise to doubt because of the substitution that G made in the first lemma (replacing *τοὺς ἀνθρώπους*). But it must be noted that the inclusion of the first person is common elsewhere (4.17.2, 4.20.2 etc.). It should be retained here because of the first person plurals in the following line.

e Other Evidence

It has emerged that the themes of this chapter can be traced, to a greater or lesser extent, in other texts, both biological and arithmological. The connections with Solon's poem and the ps.Hippocratean *De hebdomadibus* are particularly noteworthy. But two aspects set the treatment in A apart. His specific emphasis on the reaching of maturity is scarcely paralleled (only weakly in Aristotle *HA* 7.1). In addition, as we previously saw in ch. 5.18, he places no particular emphasis on the special role of the number seven, which is so prominent in the arithmological literature. For him it is merely a useful way of ordering the material and corresponds to common practice in the biological literature.

Commentary

A *Witnesses*

P^B and Q preserve four doxai of moderate length, of which G takes over all but the third. That S had a chapter on this subject can only be deduced from Photius' index (this is not indicated by Wachsmuth in his edition). Not even its chapter heading survives in the manuscripts. The heading given by Photius, Περὶ ὕπνου καὶ θανάτου, strongly suggests that S combined material from this and the following ch. 5.25 in his Anthology.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* Now that the long section on conception, birth and human development has come to an end, the doxographical parallels in Censorinus dry up completely. A compact doxography is still found in *Def. Med.*, albeit in a different location in that collection. In contrast to our chapter, the soul plays a prominent role in the first two definitions and is implicit in the third (which speaks of 'ruling parts' in the plural). The explanation of the cause, however, is given in purely physiological and material terms. By far the most illuminating parallel text, however, is the doxography on sleep found in Tertullian *de An.* 43. This text shares the emphasis on physiological factors—as opposed to psychological—which is the chief feature of A's presentation in this chapter (the soul makes its appearance in the next chapter 5.25). The church father's text contains the names of eight philosophers, three of whom are found in A (Stoics, Empedocles, Strato). His doxai are more compact than those of A, but the common elements (e.g. for Empedocles κατὰ ψύξιν ~ *refrigerationem*; for the Stoics ἀνέσει τοῦ αἰσθητικοῦ πνεύματος ~ *resolutionem sensualis vigoris*) indicate a shared tradition, the other representative of which has been identified as Soranus *De anima* (fr. 25 Podolak). We note, however, that Tertullian does not make the connection with the subject of death, which is dealt with quite differently at *de An.* 52.

In the Stoic doxography in Diogenes Laertius, sleep is described as occurring when the 'sensitive tension around the ruling part' is loosened (text below section E(a)§4). This resembles §4, but A gives more emphasis to physiological factors. In the scholion interspersed at Epicurus *Ep. Hdt.* 66 sleep is attributed to the collision of soul atoms scattered through the body. This differs from the explanation in Tertullian, *deminutio spiritus animalis* (cf. *indigentia spiritus* for Democritus). The atomist explanation is missing in our chapter.

(2) *Sources.* Earlier parallel material that can illuminate A's doxai and the features of his approach (physiological factors, connection between sleep and

death) is available in Aristotle's *Parva naturalia*, where sleep is associated with sensitive part of the soul (later developed by the Stoa) and particularly the role of blood in nutrition (cf. A 5.27). There is no dialectical discussion.

The connection between sleep and death was traditional in Greek thought, going back to Homer and Hesiod, as Laks (2015) has noted in his valuable article on 'sommeils présocratiques'. Galen in his treatise on the causes of pulses alludes to the Homeric theme of sleep as the brother of death (Hom. *Il.* 16.682, text below section E(b) General texts). Laks notes the remark attributed to Anaxagoras, 'there are two teachings for (understanding) death, the time before birth and sleep'. S cites the proverbial saying at *Flor.* 4.52b39 Hense (= 59A34 DK). But it is not the kind of material generally used by A. For a wide-ranging survey on the subject of sleep in Greek literature see Wöhrle (1995) 63–77 (but without any reference to our text).

C Chapter Heading

The chapter heading again uses the formula πῶς + the verb γίγνομαι which is so very common in Book 5; see above on ch. 5.2. The chapter thus investigates the cause, rather than giving a definition of sleep (i.e. the question type τί ἐστὶ) as we find in Tertullian and *Def.Med.* For the combination of two (or more) separate but closely related topics cf. chs. 5.27 Περὶ τροφῆς καὶ αὐξήσεως and 5.30 Περὶ ὑγείας καὶ νόσου καὶ γήρωος.

D Analysis

a Context

A now turns to the subject of sleep, which through the subject of dreams forms a link with ch. 5.2, the last chapter before he begins the long section on conception, birth and human development (chs. 5.3–23). We argued there that the chapter might better have been placed in Book 4 on psychology. Sleep is now discussed in a physiological context, with no reference to the soul (this does occur in the next chapter 5.25). The theme of death is brought in because the process of dying is seen as similar to that of sleeping. It does follow on to a limited degree from ch. 5.23 on the human being's attaining of maturity, since death is the final completion of a life. But such a context is not alluded to in the present chapter and it might be argued that a better place for a treatment of the subject of death would have been after ch. 5.30 on health and disease and old age. As we saw above in section B, however, the conjunction of sleep and death was traditional.

This and the related next chapter are the first in the series of chapters that round off the work. On the macro-structural aspect see the Introduction to Book 5, section 3, where we suggest that these chapters can be regarded

as a kind of appendix to the book, as was already suggested in Mansfeld (1990a) 3189 and n. 638.

b Number–Order of Lemmata

The four doxai as preserved in the tradition of P form a tight diaeretically organized structure, as will become clear below. It is not possible to determine whether this is the work of A or of P, both of whom favour the diaeresis. The evidence of Tertullian suggests that the earlier doxographical tradition preserved a broader range of views on sleep (and perhaps on death). These may have been present in A, but given the tight structure, it is perhaps more likely that he selected from them.

c Rationale–Structure of Chapter

In his commentary of the fragments of Diogenes of Apollonia (2008², 174–175), and also in a separate article (2015), Laks gives a valuable analysis of this chapter, which brings to light the key factors for understanding the chapter as a whole. We disagree, however, with his reluctance to accept Corsinus' emendation to Στρώτων for the final doxa (see n. 24).

The doxography commences with Alcmaeon, who has already been prominent in Book 5 (see A 5.3.3, 5.14.1, 5.17.3). He is an φυσικός, i.e. natural philosopher, but one with interests in the physiological sphere (see ch. 5.3 Commentary D(d) on §3, and Introduction to Book 5, section 6). His doxa, together with the following one attributed to Empedocles, form an opposed pair. In both cases the key factor is the blood in the body. For Alcmaeon it is the withdrawal of the blood to the veins that causes sleep. Opposed to this doxa is the Empedoclean view that sleep is caused by the cooling off of the heat conveyed in the blood. Both views can find some echoes in Aristotle's theories on the subject. For the former we recall that for Aristotle it is the role of the blood to convey food, and it is certainly an empirical observation that living beings feel sleepy after having food (see *Somn. Vig.* 3 456a30–b2). For the latter view we recall that Aristotle explains sleep through the evaporation of food, which causes heat to rise in the body (cf. *Somn. Vig.* 3 456b22–29). This appears to be the opposite of Empedocles' theory which attributed sleep to cooling off (cf. also the ultra-brief doxa attributed to Empedocles and Parmenides in Tertullian: sleep is *refrigeratio*). In another brief Aristotelian treatise death is linked, quite predictably, with extinction of the vital heat (*Juv.* 4 469b17–20), but the context there is life and death, not sleep and death as in A. Another contrast, pointed out by Laks, is that for Alcmaeon sleep is caused by the diffusion of blood as a principle of life, whereas for Empedocles it is its condition, i.e. whether it is heated or cooled.

The second pair of doxai focus on the role of air/*pneuma*. As Laks has pointed out, the third doxa stands in a double dialectical relationship to the previous two. On the one hand, whereas in the first pair blood is the principle of life and its flow allows the living being to wake from sleep, for Diogenes it acts as an impediment to the distribution of the vital air/*pneuma*, causing it to concentrate in the midriff and so inducing sleep. On the other hand, for Diogenes, as in the case of the Empedoclean doxa, there are two contrary forces at work, air and blood (as compared with the hot and the cold in Empedocles). In contrast to the second doxa, however, these two agents have to work together rather than be simply opposed to each other.

The final doxa must be attributed to Strato and the Stoics (on the first name-label see next section D(d) below). Its focus on the role of the 'sensory spirit' follows on from the previous doxa. Unlike in that doxa, but similar to the first Alcmaeon view, there is only a single explanatory factor, i.e. the *pneuma* which is concentrated between the brows in the head (and so causes dreams, cf. the view of Strato in 5.2.2). Another reason for placing this view at the end is that it is the only doxa that does not involve the movement of blood.

Following Laks, therefore, we can determine the chapter's structure in terms of two separate binary oppositions: (1) blood (§§1–2) versus air/*pneuma* (§§3–4); (2) single principle (§1, §4) versus twin principles (§2, §3). In addition, the differing role of blood in §3 forms a connection between the first and the second opposition. Laks further argues persuasively that there is a movement in the chapter towards the final doxa—what he calls a 'construction «vectorialisée»' (2015, 35; cf. also ch. 2.1 Commentary D(c))—, in which the reference to a sensory factor seems to anticipate the view of Aristotle involving the common sense (*Somn.Vig.* 2 455a26). Aristotle's absence is certainly striking. His view commences the following chapter, but from a different perspective.

In the case of all four doxai the process of death is explained as an intensification of the same process that causes sleep. In §§1, 2 and 4 the same term παντελής (complete) is used with three nouns (ἀναχώρησις, ψύξις, ἀνεσις) to explain how death is caused (cf. also A 5.25.1). In §3 it is when all (ἅπαν) the airy substance leaves the veins that death occurs. One might compare the definition of death in ps.Plutarch *Aquane an ignis utilior* (*Mor.* 757E): θάνατος δ' οὐκ ἄλλο τι πλὴν ἔκλειψις θερμοῦ παντελῆς.

Finally we should again emphasise that the approach of the chapter is purely physiological, without any mention of psychological factors. Hence the role of blood and air/*pneuma*, and the locations in the veins, the midriff and the brow. Only in the final doxa is there mention of psychic functions when it speaks of

the 'sensory spirit' and the 'regent part', but the term *ψυχή* is no doubt deliberately avoided. This is in contrast to the following chapter, 5.25, where the discrimination between soul and body is at the heart of the question posed by the chapter.

d Further Comments

Individual Points

§2 For the second half of the doxa we follow Jas' fine analysis. She argues persuasively that G's text shows that the original text in P must have been fuller than what previous editors had assumed. This concerns two elements of the second half. (1) The text in P^{B(II)} proves that the adjective *ἀσύμμετρος* as found in G must have been present, in apposition to *σύμμετρος* in the first half. (2) It is likely that it contained a verb, as represented by *ἐπαγγέλλειν* in G's text (cf. the ending of §3 and §4). This also solves the problem in Mau's emendation to *κατὰ δὲ παντελῇ θάνατον*, where the juxtaposition of the two accusatives, with the former qualifying *ψύξιν* and not the noun following, is very awkward. Jas is also right to argue that it is not so likely that *ἐπαγγέλλειν* is derived from *δὲ παντελῇ*.

§3 The double use of the future tense in the long conditional clause is unusual (the usual construction is with the optative) and it is difficult to determine what the motivation for it is here. We follow Laks in ignoring it in our translation.

§4 Although all the witnesses record the first name-label as *Πλάτων*, there can be little doubt that the correct reading is *Στράτων*. As already noted by Diels in his apparatus, the parallel doxa in Tertullian's doxography and the reference to the *μεσόφρυον* (space between the eyebrows) in 4.5.2, to which can be added parallels in 4.23.3 and 5.2.2, make the emendation first suggested by Corsinus in our view quite certain. It is a fine example of wrong-headed conservatism that Diels and the two recent editors Mau and Lachenaud retain the reading in P. Wehrli and Sharples rightly include the text in their collection of Strato's fragments, although the latter still qualifies it as a *dubium*. See also ch. 5.8 Commentary D(d)§2 on the same mistake in L (but not in P).

The emendation of the obviously wrong *ἐπὶ τῆς γῆς* is more problematic. Mau's suggestion in his apparatus *ἐπὶ τῆς γῆ(ρᾶνσεως)* is paleographically attractive, but it is not supported by any parallel passages. For Diels' *ἐπὶ τῆς μέθης*, on the other hand, references to an abnormal state can be paralleled in A 5.20.5 and Theophrastus *Sens.* 44 (*ἐν ταῖς μέθαις*; both doxai attributed to Diogenes). Nevertheless the emendation must be considered far from certain (Laks prefers to retain the crucifix without comment). Another possibility might be *ἐπὶ τῆς συγκοπῆς* (loss of strength), with Π taken as Γ and the letters *συγκο* deleted because not understood.

Another puzzling phrase in the mss. is ἐπὶ τὸ ἡγεμονικὸν μεσόφρυον, since τὸ ἡγεμονικὸν is common as an adjectival substantive and μεσόφρυον is also always a noun, so that the two appear to be in apposition. Lachenaud translates ‘vers la partie gouvernante, l’espace compris entre les sourcils’, Sharples ‘towards the ruling [principle in] the space between the eyebrows’. We have adopted the solution of Corsinus, to introduce ἥ between the two components of the phrase, since τὸ ἡγεμονικὸν is Stoic and μεσόφρυον is Strato’s view as indicated in the doxa at A 4.5.3 ἐν μεσοφρύῳ. Von Arnim states in his app. crit. that μεσόφρυον is corrupt and implausibly suggests ἐσωτέρῳ ὄν. Another possibility is that the word is a gloss imported from the earlier chapter.

Commentary

A *Witnesses*

P^B and Q preserve four doxai of medium length. Only the first two are retained in P^G, of which the former is abridged by leaving out the final part on death pertaining to the body only. No material or even reference to this chapter is preserved in the mss. of S, but the heading preserved by Photius, Περὶ ὕπνου καὶ θανάτου, suggests that he combined it with doxai from the previous chapter 5.24 on sleep.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* On doxographical material relating to the subject of sleep see our Commentary on the twin chapter 5.24.

On the subject of death in relation to the human composite of soul and body, the standard view is that death constitutes the separation of the two components (see §2, the doxa of Anaxagoras). This formulation goes back at least to Plato's *Phd.* 67d. It forms the starting point of discussions on death in a number of authors (texts below section E(a)§2). Cicero in *Tusc.* 1.18 gives a brief doxography of views relating to death without name-labels as follows:

- A Death as separation of soul from body
 - a. soul disperses immediately
 - b. soul survives for a considerable time
 - c. soul survives forever, i.e. is immortal
- B Death as extinction of both soul and body.

He then immediately connects this diaeresis with views on the nature of the soul; see chs. 4.2–3 and our Commentary *ad loc.*, and for the views relating to death esp. ch. 4.7, the Ciceronian texts cited there, and Commentary B. The same scheme is partially preserved by Philo at *Somn.* 1.31 from the viewpoint of the soul only (i.e. a–b–c only, not A&B). This is part of the set of excerpts

which go back to a version of the *Placita* earlier than A (see ch. 2.11 Commentary B, 5.15 Commentary B; also Mansfeld 1990a, 3124). As Mansfeld *ibid.* 3146 notes, comparable schemata underlie Lucretius' repeated views on the nature of death in *DRN* Book 3. A similar dialectical schema, but less clearly set out, underlies Tertullian's treatment of death in *de An.* 51.

Such schemes play no role in A's chapter, however, since A in the physiological context of Book 5 is not interested in the fate of the soul (except his surprising final remark on Aristotle's view). He has in fact dealt with the subject in ch. 4.7, where the contents of doxai attributed to Aristotle, Empedocles and Anaxagoras do not cohere well with those in this chapter. A's approach in the present chapter, with its schematic analysis of death in terms of the characteristics of both body and soul (whether corporeal or incorporeal), would appear to be without precise parallel in ancient sources.

Another intriguing Philonic text *Cher.* 114 deserves our attention. It is part of a religiously coloured text in which God as sovereign is said to give us human beings the use and enjoyment of ourselves. It presents in the first person a compact description of who we are, where we come from and where we are heading towards. Central to the passage is the distinction between soul and body, followed in §116 by the intellect (νοῦς). Various themes are reminiscent of the above-mentioned passage *Somn.* 1.30–32, which uses material from the *Placita* tradition to show how little we know about the intellect and the soul. When describing the body, emphasis is placed on the process of development from baby to full-grown man involving the various stages of life, reminiscent of the topic of ch. 5.23. What is striking in comparison with what we find in A is the presence of distinctively Platonic themes, not just the strong soul-body dualism, but also references to life after death in the incorporeal realm followed by rebirth (παλιγγενεσία, i.e. reincarnation). These are the kind of themes that are missing in our doxography, with its emphasis on physiological aspects and processes. It is striking, in fact, how infrequently Platonic doxai are to be found in Book 5, with after ch. 5.4 only three examples (A 5.15.1, 5.20.4 and 5.26.1, not including 5.24.4 where the name-label must be emended to Strato). On this Philonic text and its likely reference to the doctrine of reincarnation see further Yli-Karjanmaa (2015) 150–167.

(2) *Sources.* On the question of whether sleep and waking belong to the soul or the body or are κοινά, Aristotle in his brief treatise on the subject (*Somn. Vig.* 1 454a8–11, text below section E(b)§1) gives the answer recorded here; see the discussion below section D(c). His treatise contains no dialectical discussions. Given this Aristotelian background, however, it may be surmised that the material in this chapter on sleep derives from the Peripatetic tradition, which surveyed views developed by earlier authors.

On the subject of death in relation to the human composite of soul and body and the key role played by Plato's statement at *Phd.* 67d, see above (a) on the Proximate tradition.

C Chapter Heading

The formulation with ὁποτέρου (literally 'of whichever of the two', simplified to πότερον in G and Q) is unique among the chapter headings in A. But effectively it asks an εἰ question, i.e. whether a phenomenon belongs to the soul or the body, and so is reminiscent of a number of other chapters which focus on corporeality or incorporeality (4.3 on whether soul is corporeal; 4.17 on whether voice is incorporeal; 4.23 on bodily affections and whether the soul is also affected; 5.4 on whether semen is corporeal). The question is well-suited to the schematic and diaeretic method of the *Placita*; see further M–R 2.1.57–58, 147. Following on from the previous ch. 5.24, it again invites investigation of the cause.

D Analysis

a Context

The chapter forms a twin with the previous one. As in ch. 5.24 sleep and death are regarded as closely related phenomena, for which parallel explanatory factors are utilized. However, whereas ch. 5.24 makes no reference to the soul per se (there is only a mention of the αἰσθητικὸν πνεῦμα and the ἡγεμονικόν in §4), in ch. 5.25 the focus is squarely on how the explanations given relate to the two components of the living being, soul and body. Although the reader will probably assume that it is the *human* soul and body that is being referred to, this is not made explicit until the final doxa which speaks of the elemental components of the ἄνθρωπος (but note Q speaks of *Lebewesen*, i.e. 'living beings', in his translation).

b Number–Order of Lemmata

The chapter has four lemmata, the same number as its twin 5.24. Given the lack of exact parallels, it is not possible to gauge whether the chapter has been abridged. One might have expected a doxa of Plato to be included, but see our remarks above in section B.

c Rationale–Structure of Chapter

Each of the four doxai addresses the subject of the chapter in a reasonably comprehensive manner, outlining how sleep and death occur in relation to both soul and body. The chapter continues the main insight of its twin 5.24, namely that death is the intensification of the process that leads to sleep. This is explicit

in the first and third doxa, less clear in the other two. However, in the absence of comparative material it is difficult to determine the exact meaning of the doxai and the intended structure of the chapter. As was already noted above, the views on the soul do not cohere very well with what we read in Book 4, and particularly with ch. 4.7 on the soul's immortality.

(1) The first doxa setting out Aristotelian doctrine immediately answers that sleep is a joint activity of both body and soul. The doxa is taken directly from his treatise *De somno et vigilia*, where both the question and the answer are given in ch. 1, with further details (including the role of food) in ch. 3. The explanation of death follows the same pattern as in 5.24, including the use of the adjective παντελής to indicate intensification of the process of cooling resulting in death (cf. §1 Alcmaeon, §3 Empedocles). For this doctrine the doxographical tradition appears to have made a link between the above text and *De juventute* 4, where death is explained as the destruction of the heat in the heart (but there is no mention of this organ here). It is difficult to determine the source of the final part of the doxa in which it is denied that there is death of the soul. It is perhaps a deduction from the above-mentioned text in *De juventute*. It does not agree with the conventional way of reading the *De anima*, where only the νοῦς does not perish (*de An.* 1.4 408b19; we recall that at A 4.7.4 Aristotle is conjoined with the atomists in saying that the soul perishes together with the body). There is a strong tradition that Aristotle defended the immortality of the soul in his exoteric treatises (esp. the *Eudemus*), but it is highly unlikely that this background is relevant to the present doxa. Another way to rescue the doxa, advocated by Laks (2015) 36–37, is to postulate that the doxographer has the νοῦς in mind here.

(2) The second doxa attributed to Anaxagoras is diametrically opposed to that of Aristotle, i.e. the two views form a diaphonia. (a) Sleep is not a joint phenomenon but pertains to the body only, i.e. as the result of weariness caused by bodily activity. In contrast to the other doxai in the chapter, no precise physiological explanation is given. (b) Death is described as occurring through 'the separation of the soul (sc. from the body)', using a widespread definition best known from Plato's *Phaedo*. It is not indicated what this means for the soul. At A 4.3.2 Anaxagoras is among those who hold that the soul is 'air-like' and is a body. This would imply here that the death involves the destruction of the soul. In A 4.7.1, however, Anaxagoras is credited with the doctrine of the soul's immortality. It is generally agreed that this tenet is difficult to reconcile with what we know about his views on generation and destruction (see for example Guthrie 1962–1981, 2.317) and is likely to be a mistake.

(3) The next doxa of Leucippus follows on from the previous one but adds a physiological explanation, the details of which are rather obscure (there may

be a connection with Aristotle's report on Democritus' views in *Resp.* 4 471b3–16, where life and death are caused by the influx and efflux of 'shapes'). With regard to sleep the view is the opposite of that of Anaxagoras, and so returns to the Aristotelian position. However, the reader is probably meant to recall that for the atomists soul is corporeal. This would explain the final phrase, that these are 'affections of the body and not of the soul'. As in ch. 5.24 and §1, death is the intensification of the process of sleep.

(4) The final Empedoclean doxa differs from the previous three in that death is explained first. Here too textual problems bedevil an understanding of the doxa. The explanations of death and sleep appear to be given in terms of the elemental components of the human body (and not blood as in 5.24.2). Our text follows Diels in restoring all four elements, of which the separation of the 'fiery' is death. But one would also expect a reference to cooling, as found in 5.24.2. Guthrie has proposed emending to διαχωρισμόν τοῦ πυρώδους (ἀπὸ τῶν στοιχείων) ἐξ ᾧν ... (1962–1981, 2.226 n. 1). But this does not explain how death and sleep differ. Death is 'common' to body and soul just as sleep was for Aristotle at the chapter's beginning. If this means that both body and soul dissolve, then it contradicts Empedocles' widely recognised doctrine of the immortality of the soul, as stated in A 4.7.1. But such a conclusion is perhaps not necessary.

Despite a reasonable amount of detail, this chapter remains one of the more obscure in the collection. One suspects that originally behind the various formulations a complex diaeresis may lie hidden, which would be clearer if we could be sure what was exactly meant by the genitives ψυχῆς and σώματος. As an approximate schema we might suggest the following (where B = of body, S = of soul):

Aristotle	sleep B and S (non-corporeal)	death B not S
Anaxagoras	sleep B not S	death B and S
Leucippus	sleep B and S (corporeal)	death B and S
Empedocles	death B and S (complete)	sleep B and S (partial)

This is somewhat reminiscent of the kind of schemata found in the early chapters of Book 2 on the cosmos (cf. M–R 2.313, 340, 355, also above ch. 2.1 Commentary B). But the exact details of the schematism are far from clear, particularly in the case of the final Empedoclean doxa.

Laks (2015) 37 has usefully pointed out that the placement of Aristotle at the beginning of the chapter reflects the fact that 'il formule la problématique qui guide rétrospectivement la lecture des trois notices (présocratiques) qui suivent, mais aussi parce qu'il livre d'emblée la position attendue, conforme aux exigences d'un vague horizon platonicien'. This means that the movement

of the chapter is the reverse of the previous one, not moving towards a dominant view as in 5.24, but starting with such a view and then moving through a number of more idiosyncratic earlier theories. This is again similar to some of the cosmological chapters in Book 2, e.g. 2.14, 2.24, 2.27.

d Further Comments

Individual Points

§1 In the second explanation of sleep it is tempting to read with Diels καταψυχθέν instead of the mss. περιψυχθέν or παραψυχθέν. But the *lectio difficilior* should be retained. A may have wished to have some variation with the noun καταψυξις in the next line. Q paraphrases (*natürliche* may translate κατὰ φύσιν). Diels definitely errs in bracketing the final clause because of the change to *oratio recta*. Such changes are common in A; for examples in this Book see chs. 5.4.3, 5.4.1, 5.8.1, 5.20.4 etc.

§3 The addition of κόπῳ is perhaps not necessary. But it appears to have been in Q's text, as acutely seen by Daiber, who explains the wayward translation by suggesting that Q read a colon after οὐ following the name-label. It should be noted that the nouns ἐκκρίσει and εἰσκρίσεως are both suggestions by Diels based on terminology used in A 4.13.1 and 4.17.2.

§4 The conjecture of the three additional elements in the second line must of course remain somewhat speculative (for ἀερώδης in Empedoclean doxai see A 4.3.12 (where we take over Diels' conjecture), 4.22.1, 5.15.3). All three adjectives are commonly found in A. We have rearranged the three adjectives before ἀερώδους to make the scribal error (*saut du même au même*) more plausible.

Commentary

A *Witnesses*

In P^B and Q three doxai of modest length are followed by a very long extract from a summary of Empedoclean cosmogony, similar in length and approach to the long lemmata elsewhere, e.g. at A 2.6.3, 2.20.13, 4.22.2, 5.19.4. G writes out the entire chapter, including almost all of the long lemma, but through a scribal error the second and third doxa have been coalesced (see below, section D(d) on §3). In one of the rare surviving extracts from Book 5 S preserves the first two doxai with the name-labels Plato (together with Thales) and Aristotle (cf. 5.18.4 and 5.20.1). The similar text in T is not taken from A, but based on a passage in Clement of Alexandria; see section D(e) below.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* There is an excellent and precise parallel, as already noted by Mansfeld (1990a) 3184–3190, in Book 8 of Clement of Alexandria's *Stromateis* for the diaeresis presented in the first three doxai. Clement raises the present question as part of the dialectical discussion on whether an embryo is an animal (cf. ch. 5.15). Its presence in that work, with its scholastic dialectical contents (on which see above, ch. 5.15 section B(a), where we note Havrda's recent suggested attribution to Galen), demonstrates that the quaestio was traditional. On T's appropriation of this text see further below section D(d). There are no precise parallels in the further proximate tradition. At the beginning of Nemesius' book on human nature (ch. 2, p. 34.5–9, cited below section E(a) General texts) we find a different kind of diaeresis on the kinds of living beings,

resembling Porphyry's tree, which does show some resemblance to our chapter and esp. the second doxa. But it does not present doctrinal alternatives with name-labels as occurs in A.

A significant parallel for the quaestio and its doxographical treatment is found in the treatise *Περὶ φυτῶν* which is part of the Aristotelian corpus. The transmission of this work is uniquely complex. The Greek text is a retroversion of a 12th cent. Latin translation of an Arabic translation based on a Syriac *Vorlage*, which in turn was based on the original Greek text. The work itself was written by the first cent. BCE Greek author Nicolaus of Damascus and may have been based on a work by Aristotle or by someone in his school. On this work see Drossaart Lulofs (1957) and the splendid edition of the five translations in Drossaart Lulofs–Poortman (1989); for a discussion of its transmission and contents see Moraux (1973–1984) 1.487–514, with also a useful overview at Wolfsdorf (2009) 40. As the extracts cited below at section E(b) General texts show, the first chapter discusses the same question as our chapter but only considers the first two positions (but note in 1.5 and 2.1 the allusion to Empedocles' view on the bisexual nature of plants as also found in the final doxa). The doxographical reports on Plato, Anaxagoras, Empedocles and Democritus describe the view in A's first doxa (with all but Plato in some respects going further, as indicated in 1.10). The views reported by Nicolaus may thus go back to the Peripatos, but are not used by A (the name-label Empedocles is shared with P^B in §1, but it was not originally present in A; see further section D(c) below). The Aristotelian view in the second doxa is precisely that taken in Nicolaus' treatise. It is basically consistent with the views of Aristotle himself, though closer to his psychological than his biological works (see texts cited below section E(b)§2). In denying that plants can be called ζῷα but granting that they are ἔμψυχα Nicolaus is effectively arguing against the third position in A's diaeresis. But he does not refer to any Hellenistic views.

It is surprising that so little dialectical and doxographical material finds its way into the proximate tradition. Consistent with this is the fact that the subject of the nature of plants is not discussed in any of the major doxographies in Diogenes Laertius and similar sources, with the single exception of a brief mention that plants are ζῷα in Alexander Polyhistor's account of Pythagoras' doctrines at D.L. 8.28.

(2) *Sources*. On the basis of the above evidence, discussion of the question thus goes back to the Presocratics, with Plato taking over the view of Empedocles and Anaxagoras in his brief reference to plants as ζῷα at *Tim.* 77b5–c3 (text below section E(a)§1). As so often in Book 5, however, the basic question as treated by the doxographer goes back to Aristotle's psychological and biological

works, with at least half a dozen passages discussing whether plants should be regarded as ζῶα on the basis of whether they possess the appropriate characteristics of soul, with a particular emphasis on sense-perception (see texts below section E(b)§2).

C *Chapter Heading*

Like the previous chapters on living beings, chs. 5.19 and 5.20, this chapter has a multiple heading, but this time the focus is on plants. Like the heading of ch. 5.19 it has a verb in the aorist, pointing to a past event, i.e. the cosmogony, as emerges in the doxai of Anaxagoras at ch. 5.19.3 and Empedocles at ch. 5.19.4 and §4 in the present chapter (cf. also 5.7.1 and 5.18.1). A similar aorist also occurs in ch. 2.6 Ἀπὸ ποίου πρώτου στοιχείου ἤρξατο κοσμοποιεῖν ὁ θεός, which also has a (shorter) report on Empedocles' cosmological doctrine. We note too that like 5.19 and 5.20 the heading also contains a question using the formula εἰ x (sc. ἐστί), asking a question in the category of substance and inviting a dialectical response; see also chs. 1.5, 2.3–4, 4.3, 9, 15, 20, 23, and in this book chs. 5.4, 5, 15 and 29. The formula is used by Clement in the text discussed above in section B: εἰ καὶ τὰ φυτὰ νομίζει (sc. ὁ προβαλόν, i.e. the dialectician) ζῶα.

We now retract an earlier suggestion at Mansfeld (1990a) 3190 that this chapter has combined what were originally two chapters in A. This ignores the evidence of S, whose first two doxa show that both parts were present in the work excerpted by the anthologist.

D *Analysis*

a Context

The chapter follows on from the two living beings in chs. 5.19–20, with some links to 5.15 because according to some philosophers the embryo was like a plant. It might have seemed that the interposed chapters 5.21–25 on the development of the human being had been rounded off with the theme of death. After this chapter the sequence continues with chapters on nutrition–growth and appetite–pleasure, in which general references are made to ‘living beings’ (ζῶα), before returning to disease and old age which appears to focus on human beings again. A has clearly had difficulty in including more general chapters on animals and plants in a book which is devoted primarily to human physiology.

b Number–Order of Lemmata

The order of the two doxai in S matches what we find in the tradition of P. Although, as we shall see in the next section, the order of the four doxai in P does not correspond to the chapter heading, there are no grounds for making any changes to it. It is not possible to say whether A's original chapter contained

more doxai, but the evidence in Nicolaus suggests there may have been more Presocratic material.

c Rationale–Structure of Chapter

The chapter divides into two sections, corresponding to the two distinct parts of the chapter heading, but with their order reversed.

The first section consists of three doxai answering the question whether plants are living beings (ζῷα). In the first doxa the first position is given that plants are living beings with soul (ἔμψυχα ζῷα). The other two doxai then provide two further positions in opposition to the first. The schema can be summarised as follows:

- (1) plants are ἔμψυχα ζῷα (both A and B)
- (2) plants are ἔμψυχα, but not ζῷα (A but not B)
- (3) plants are not ἔμψυχα, and by implication not ζῷα (neither A nor B).

The simple dialectical scheme is reminiscent of similar schemes in chs. 2.1 and 2.3–4 on the cosmos where the combinations of two attributes are explored through attachment to single doxai. We note that one of the four theoretical options is not represented, i.e. that plants are ζῷα but not ἔμψυχα, for the good reason that it is a scarcely tenable view. This is parallel to the case of ch. 2.4 that the cosmos is not generated but nevertheless destructible. We find the diaeresis simply and explicitly set out in a text in Themistius' paraphrase of Aristotle's *De anima* (text below section E(b)§2), where Aristotle is said to be μέσος Πλάτωνος καὶ τῶν ἀπὸ τῆς Στοᾶς.

In the first doxa there can be little doubt that the name-labels are the unusual combination of Plato and Thales in that order. The evidence of S and G clearly outweighs that of P^B, and Q, who both replace Thales with Empedocles. *Pace* Drossaart Lulofs (1987) 11, the references to Empedocles' views in Nicolaus (perhaps going back to Aristotle) are not enough to rescue the name-label in P^BQ, particularly since its content does not show any similarities (text below). It has to be said, however, that this the only time that Thales appears in Book 5 (and only twice in Book 4). The attribution would appear to be an extrapolation from his well-known view that the lodestone has a soul since it imparts movement to iron. This is first mentioned by Hippias at D.L. 1.24 (86B7 DK), reported by Aristotle in *De anima* 1.2 and repeated in many other texts. Perhaps the view that the world is full of gods (cf. Arist. *de An.* 1.5 411a7–8) may have contributed as well. See further on A 1.7.11 and 1.8.2 (where the name-labels Thales and Plato also occur, augmented with those of Pythagoras and the Stoics). We have not found any parallels, however, for the unusual evidence given in support of the

doxa, which is quite different from the reasoning given by Plato himself at *Tim.* 77a–c; see the comments at Boys-Stones (2018) 294.

The second doxa presents a position consistent with Aristotelian doctrine from which it is derived, though the terminology has been modernized (see below, section D(d) on §2). Plants can be called ensouled because they possess the nutritive part of the soul (not mentioned, however, by A), but they are not ζῷα because they lack the defining characteristics of sense-perception and impulse. The third doxa, attributed to the Stoics and Epicureans, then goes the final step and denies that plants are ensouled, asserting that they move ‘spontaneously somehow’. The difference between the two doxai is not made sufficiently clear. The Stoic view that the structure (*logos*) of plants is determined by not ψυχή but by φύσις (cf. texts in Galen and ps.Alexander cited below) is not mentioned. There is no evidence elsewhere to determine the correctness of adding the name-label of the Epicurean school to this doxa.

The diaeresis of the first three doxai is thus dominated by the name-labels representing the four main Hellenistic schools, with the addition of Thales in the first doxa. It thus shows the influence of what might be called the ‘Hellenistic philosophical agenda’ (cf. M–R 2.1.15, 92, 139–153). But added to this first section is the remaining part of the chapter, the very long Empedoclean doxa §4, which has quite a different background.

The link with the chapter’s first part is that Empedocles is recorded as regarding plants as a kind of ‘living being’, indeed the first of the ζῷα to spring from the earth. Their bisexual nature, which continues to this day, means they can be regarded as a kind of ‘living fossil’ (cf. Guthrie 1962–1981, 2.208; O’Brien 1969, 206, 233). As parts of the earth, they share characteristics of an embryo (cf. A 5.15.2–3, where both the Stoics and Empedocles are said to reject the view that the embryo is a ζῷον). The doxa thus reveals the same cosmogonic background found in earlier doxai at A 2.6.3, 2.20.13, 5.7.1, 5.18.1, and especially 5.19.4 where the first generation of plants is explicitly mentioned. Traces of the original verses that inspired this summary may be found at 31B77–78 DK (see further below D(d) on §4). Lucretius’ description of the first emergence of plants ‘in the beginning’ (*DRN* 5.783–791) is no doubt indebted to Empedocles’ account. The final part of the doxa, with its discussion of kinds of trees and flavours of fruits goes far beyond the requirements of the doxography and is clearly a remnant of much fuller earlier summaries.

The final doxa thus has a different origin from the first three, with a link through the theme of plants as ζῷα. Its contents have led to the subject Πῶς ἡβύξῃθη τὰ φυτὰ being first indicated in the chapter heading, even though the doxa describing their growth comes last in the chapter itself. As noted above in section C, the aorist tense is linked to the cosmogonic description.

d Further Comments

Individual Points

§2 The term ὁρμητικός scarcely occurs in the Aristotelian corpus, being used for sexual impulse in the *Historia animalium* (e.g. 6.18 572a8) and the *Problemata*. It occurs only rarely before the first cent. CE, but is found in Arius Didymus (e.g. on touch at *Stob. Ecl.* 1.56, p. 496.20), on the parts of ethics (Eudorus) at S 2.7.2, p. 42.23, in the Stoic doxography on impulse to movement at *Stob. Ecl.* 2.9, p. 86.18 (= *SVF* 3.169), and in the Aristotelian doxography on the parts of the soul at S 2.9.13, p. 117.12. By the time of Alexander of Aphrodisias' *De anima* it is extremely common. It is thus indicative of terminological developments in the later Hellenistic period.

§3 If the text in G is read as <οἱ Στωικοὶ δὲ καὶ Ἐπικούρειοι οὐκ> ἔμψυχα· πάσαν γὰρ ψυχὴν ὁρμητικὴν εἶναι· <τὰ δὲ φυτὰ> αὐτομάτως γεγενῆσθαι δίχρα ψυχῆς, it actually makes excellent sense, particularly if ὁρμητικός is used in a sexual sense. But there is too much missing compared with P^{BQ} and so our text should retain the majority reading. Gassendi's emendation of γεγενῆσθαι to κενεῖσθαι is accepted by modern editors (Diels preferred κινεῖσθαι followed by Usener), but in the light of G's evidence it cannot be considered certain.

§4[11] There is little to choose between the reading ἀναδῦναι in P^B and that of ἀναφῦναι in P^{GQ}. The latter gives a link to the theme of plants (φυτὰ), the former—as noted by Bollack (1965–1969) 3.2.502—is perhaps suited to the cosmogonic context better than ἀναφῦναι in P^{GQ}. We follow Jas (2018b) 144–145, who argues that the evidence of P^Q tips the scales in favour of ἀναφῦναι. See her article further for discussion of how the evidence of G and Q shows up the deficiencies of the Byzantine text for this lemma.

§4[17–19] It is noteworthy that the passage on deciduous and non-deciduous trees in Plutarch *Quaest. Conv.* 3.2 649D (text below section E(b)§4), which names Empedocles and cites a word from his poem, contains two verbs in common with the report in A (φυλλορροεῖν, παραμένειν). But the explanation given for the falling of the leaves differs (A cites heat, Plutarch narrowness of passages and lack of food).

e Other Evidence

At CAG 5.24–25, p. 129.4–11 T records three doxai on the status of plants which have some of the same name-labels as in A (Plato, Aristotle, Stoics) and show considerable resemblance in terms of contents. This text follows upon the extensive excerpts from A 4.2–7 which T records in CAG 5.17–24. It emerges, however, that he has not derived these three doxai from A, but has paraphrased the text at Clement *Strom.* 8.10.3–4, as clearly demonstrated by the parallel columns set out at Mansfeld (1990a) 3188. Scholten's query (2015, 367 n. 37) as

to whether T might have derived this material directly from A rather than via Clement is misguided. T has in fact not used any material from Book 5 at all. Diels *DG* 367 was apparently unaware of the Clementine origin and included these doxai as part of his text of A 4.7 on the immortality of the soul, printing them at the bottom of the page under the usual heading of *aliorum ex Aetio excerpta*; see Mansfeld (1990a) 3189 and our Commentary on A 4.7 at D(b) and on A 4.7a at D(a). Havrda (2016) 184 in his commentary of the Clementine text fails to note the parallel in A.

b Sources and Other Parallel Texts

General texts: cf. Aristotle *de An.* 2.2 41321–22 λέγομεν οὖν, ἀρχὴν λαβόντες τῆς σκέψεως, διωρίσθαι τὸ ἔμψυχον τοῦ ἀψύχου τῷ ζῆν. πλεοναχῶς δὲ τοῦ ζῆν λεγομένου, κὰν ἔν τι τούτων ἐνυπάρχη μόνον, ζῆν αὐτό φαμεν, οἷον νοῦς, αἴσθησις, κίνησις καὶ στάσις ἢ κατὰ τόπον, ἔτι κίνησις ἢ κατὰ τροπὴν καὶ φθίσις τε καὶ αὔξεισις.

Nicolaus of Damascus *De plantis* 1.1–27 in the Arabic translation of Ishāq ibn Ḥunayn, translated by Drossaart Lulofs–Poortman, later retranslation into Greek in the Aristotelian corpus at 815a10–816b6: ‘Life is found in animals and plants; but the life of animals it is manifest and clear, whereas the life of plants is hidden and concealed. An inquiry and an investigation are needed in order to find the way of truth in these matters. (2) I wish I knew whether plants possess a soul and its faculties, such as the desiring faculty and the faculty that distinguishes between pain and pleasure—or whether they have nothing of the kind. (3) Now, Anaxagoras and Empedocles assert that plants have desire and sensation, pain and pleasure, and Anaxagoras naively asserts that they are animals and that they feel joy and sadness and he cites as proof the shedding of their leaves in due season, and Empedocles asserts that their males and females are mingled together. (4) Plato, however, says that plants have the faculty of desire only on account of their need of nutriment. But if plants really had the faculty of desire, they should have pleasure and pain, and sensation as well. (5) Again, I wish I knew whether plants have sleep and awakening, and whether they breathe and have males and females, or something in which male and female are combined, as Empedocles maintains—, or whether they do not possess a soul? (6) Now, the great diversity of opinion existing on the soul of plants asks for a long investigation into all its conditions. The best course is to settle the issue and to remove our doubt about this point, in order that we shall not need a long inquiry into the other things. (7) Some people have said that plants possess a soul, because they had observed their generation, nutrition and growth, and their youth and old age, since none of the inanimate things is found to share any of these things with plants. And if these characteristics are necessary for plants, they should have desire as well. (8) Our first task, then, is to discuss the obvious characteristics; thereupon we will discuss the hidden ones. (9) Now, he says (cf. some people in §7 above) that a thing which is nourished has desire, and will find pleasure in satiety and pain with hunger, and these dispositions are only concomitant with sensation. It is certainly true that the opinion who said that plants have sensation and desire is most remarkable. (10) On the other hand, Anaxagoras, Empedocles and Democritus maintained that plants possess reason and understanding. But we must refrain from this abominable nonsense and begin with a sound statement: (11) plants have neither sensation nor desire, for desire can only go with sensation, and the aim of its pursuits depends on the latter. ... (13) It is true that with the part of nutrition and growth they possess only one of the parts of the soul. And so, if we find an indication that plants have one of the parts of the soul, but are destitute of sensation, we ought not to contend

that they have sensation. ... Perhaps someone will say: 'If a plant is endowed with life, it is an animal'—and it certainly would be difficult for us, if a plant was found to have a principle different from the principle of life of an animal. ... (26) The plant, then is not deprived of a soul, since it possesses one of its parts—but neither is it an animal, since it has no sensation. It passes gradually from life to its privation, just as in other things. (27) And so we must declare the plant to be animate in a different way, and not to be inanimate, since it possesses a soul {and sensation}. For a thing that is nourished is not without a soul.' **ps.Alexander** see below on §3. **Porphry ad Gaur.** 3.1 Kalbfleisch πρῶτον μὲν οὖν αὐτὴν μαρτυροῦμενοι τὴν ἐνάργειαν πρὸ ὀφθαλμῶν θέσθαι ἀξιόμην τὰς εἰδοποιούς διαφορὰς τῶν φυτῶν τε καὶ τῶν ζώων. cf. *ad Gaur.* 1.1 τῆς μὲν ἰδιότητος τοῦ ζώου ἐν αἰσθήσει καὶ ὁρμῇ συνισταμένης, τῆς δὲ τῶν φυτῶν ἐν θρεπτικῇ τε καὶ αὐξητικῇ χωρὶς αἰσθήσεως τε καὶ ὁρμῆς θεωρουμένης.

(37) For it is characteristic of the male to engender offspring in another and of the female to engender from another while each of the two is separate from the other. But in plants no such thing is found, (and every kind of plant makes fruit in itself, not in another) ... (57) Empedocles was right in saying that plants were generated when the world was incomplete and its perfection had not yet been attained, whereas animals were generated after it had been perfected and completed. (58) Nevertheless, he did not say the right word, for the world as a whole is eternal and everlasting, and has not ceased to produce animals and plants in all the varieties of their species.' see also Greek text based on the Arabo-Latin translation of Alfred of Sareshel in the corpus Aristotelicum *De plantis* 2 816b40–817a6, b35–40.

§2 A 1.3.4 (de Anaxagora) καὶ ἐκ ταύτης τῆς τροφῆς τρέφεται θριξ φλέψ ἀρτηρία νεῦρα ὅσα καὶ τὰ λοιπὰ μόρια. τούτων οὖν γινομένων ὁμολογητέον ἐστὶν ὅτι ἐν τῇ τροφῇ τῇ προσφερομένῃ πάντα ἐστὶ τὰ ὄντα καὶ ἐκ τῶν ὄντων πάντα αὖξεσθαι καὶ ἐν ἐκείνῃ ἐστὶ τῇ τροφῇ μόρια αἵματος γεννητικὰ καὶ νεύρων καὶ ὁστέων καὶ τῶν ἄλλων· ἃ ἦν λόγῳ θεωρητὰ μόρια. cf. A 5.15.1 (Plato de fetu) καὶ γὰρ κινεῖσθαι ἐν τῇ γαστρὶ καὶ τρέφεσθαι (καὶ αὖξεσθαι add. P^G).

For an English translation of the Aëtian text see Volume 5.4

Commentary

A *Witnesses*

P^B has only the first lemma and the first three words of the second, after which there is a lacuna of 1¾ lines in the mss. Mosq. 339 and Marc. 501, indicating that the archetype must have become illegible at some stage in the transmission. The chapter is missing altogether in P^G. Q deviates considerably from what has been transmitted in P^B. He commences with a full lemma devoted to Anaxagoras' view. Then he follows with the final sentence of the Empedoclean lemma as found in P^B, followed by the rest. The only collection of Presocratic fragments to include this new testimonium of Anaxagoras so far is that of Gemelli Marciano (2007–2010, 3.94–95); it is absent in that of Laks and Most. The lemma is also discussed as part of a lengthy analysis of chs. 5.27–28 in Wolfsdorf (2009) 34–39.

There is no mention of this chapter in the mss. of S, but a heading is preserved in Photius' index. Because it refers to the subjects of nutrition and desire relating to living beings, it is likely that S combined the material of ch. 5.27 and 5.28 in a single chapter and coalesced the headings. Given the proximity of the two subjects (desire here means appetite), this was a logical thing to do.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* In the proximate tradition the main witness is ps.Galen *Def.Med.*, who gives a compact doxography stating the views of Hippocrates (digestion of food through innate heat), Erasistratus (mechanical action), Empedocles (putrefaction) and Asclepiades (no cause mentioned). It remains puzzling, however, that there is no place in the extant doxography for the Aristotelian view of nutrition via concoction (πέψις). Two very similar doxographies on digestion are found in Celsus and ps.Soranus (texts below section E(a)), but Empedocles is not mentioned (unless Van der Eijk 2000–2001, 2.72 is correct in thinking that in the latter text Empedocles should be read instead of Diocles). These are all three medical texts, and so differ in emphasis from what we find in A.

(2) *Sources.* As the mutilated contents of the chapter indicate, discussions on these subjects commenced in the Presocratic period, with a particularly important contribution made by Empedocles' theory of putrefaction leading to absorption in and distribution via the blood (a 'remarkably economical' theory, Longrigg 1993, 73). In his famous account of Socrates' early interest in natural

philosophy Plato gives as his first example of generation and destruction a reference to hot and cold producing putrefaction, with which living beings are nourished (or sustained, συντρέφεται). There may be a cosmogonical reference here, e.g. to Archelaus as reported by Hippolytus *Ref.* 1.9.5 (60A4 DK), but this is disputed (cf. Mansfeld 2000a, 7). A work in the Hippocratic corpus has the title Περὶ τροφῆς (Littre 9.98–120), consisting of 55 aphorisms, many of which have an impressive philosophical (and Heraclitean) bent. According to this author it is moisture which carries nutrition and enables its δύνάμις to reach the parts of the body. However, this work is likely to be post-Hippocratic and may show the influence of Stoicism (Jouanna 1999, 401). In the Hippocratic writings themselves the process of digestion is understood in vague and metaphorical terms (Jouanna 1999, 314). Works devoted to the subject of nourishment and growth were produced in the Peripatos by Aristotle (see the discussion of his various references to such a work at Wolfsdorf 2009, 22) and Strato (see below), but they have not survived.

C Chapter Heading

The chapter heading reverts back to the usual umbrella formula Περὶ x, which is used in only a minority of chapters in Book 5. Apart from the Hippocratic work mentioned above, there is also a work entitled Περὶ τροφῆς recorded for the Hellenistic doctor Phylotimus. Exactly the same title Περὶ τροφῆς καὶ αὐξησεως is found in the list of works of the Peripatetic philosopher Strato in Diogenes Laertius. On the heading preserved in Photius' index of S see above, section A.

D Analysis

a Context

After the chapter partly devoted to the growth of plants (5.26), a connection is made with nutrition and growth in animals (ζῷα are explicitly mentioned at the beginning of the first doxa). It is the first of four final chapters in the book dealing with purely physiological subjects. There is also a clear connection between nutrition/growth and sleep which Aristotle develops at *Somn. Vig.* 3 456a30–35; see on ch. 5.24 section E(b) General texts. This connection is obscured by the interposition of ch. 5.26.

b Number–Order of Lemmata

As noted above in section A, the order of the text of the chapter differs in the two witnesses that record it. Q places the Anaxagoras doxa first in the chapter and then writes out the second sentence of the Empedocles doxa separately without a name-label, before presenting the main part of the doxa. Wolfsdorf (2009) 38–39, wishing to defend his thesis that the two doxai present views that

originally referred to nourishment and growth in plants rather than in animals, argues that Q has the right order. The sentence on human beings is ‘not consistent with any of the testimonies or fragments of Empedocles or Anaxagoras’ and thus ‘it seems likely that it belongs to another philosopher and that it is indeed misplaced in both the Greek and the Arabic traditions’. This claim is misguided, because in fact the view on the different early development of human beings fits in very well with the Empedocles doxa at A 5.18.1, which derives features of present-day human biology from earlier stages of his cosmology (cf. also 5.19.6 which gives various stages of the development of living beings and briefly refers to presumably human ‘women’). So it is very likely that this sentence refers to Empedoclean cosmology (cf. O’Brien 1969, 52 n. 8). There is in fact a good continuity with the cosmological material at the end of the previous chapter, where the Empedocles’ lemma 5.26.4 speaks of both ζῷα and φυτά. We thus retain the order in P^B, and have added the extra material found in Q to the second doxa as it appears in the Greek mss. Moreover, the theory of nutrition recorded is not incompatible with what we know about Empedocles’ theory of digestion, although as we shall see, it is not complete.

It is probable that the chapter was originally longer, as is suggested by the additional name-labels recorded by ps.Galen *Def.Med* and Celsus, which belong to both the earlier and the Hellenistic period of Greek medicine. The inclusion of doxai of Plato (cf. *Tim.* 77c) and Aristotle, which are both not present in ps.Galen, is also quite possible.

c Rationale–Structure of Chapter

Both doxai emphasize the role of moisture in the process of nourishment. They differ in their explanations of growth and wasting away. For Empedocles this involves the role of heat and the wasting away that occurs when both moisture and heat fail. There is no mention, however, of the crucial role that putrefication (σῆψις) plays in the process. For Anaxagoras growth is explained through the amount of nourishment, wasting away through excessive decomposition (or digestion). The chapter thus has the form of a weak diaeresis, with the two views having similar and dissimilar elements.

As we have seen, the final sentence of the first doxa continues the cosmogonic themes that occur frequently in Books 2 and 5; see Introduction to Book 5, section 5. It also introduces a shift from ‘living beings’ at the beginning of the doxa to the more specific ‘human beings’. The implication may be that the first humans came out of the earth as whole-natured forms, whereas human beings now go through the whole process of growth from an embryo onwards, including sex differentiation (cf. A 5.15.3, 5.18.1, 5.19.6). We recall the fantastical doctrine explaining the viability of seven and ten month old fetuses

in ch. 5.18.1. It is possible that the specific doctrine on growth may be a straight deduction from verses cited by Simplicius (31B62.4–5 DK; full text below section E(b)§1): ‘Whole-natured forms first sprang up from the earth, having a part of both water and warmth.’ This may also explain why the doxa only conveys part of Empedocles’ theory.

The presence of the Anaxagorean doxa may have been encouraged by the prominence of τροφή in the explanation of his doctrine of first principles (the so-called ὁμοιομερείαι); see the detailed report at A 1.3.4 and our Commentary ad loc. In contrast to the first doxa, however, the explanation given in the text is purely physiological, with no reference to possible cosmogonic aspects. This in turn is in contrast to the doxographical fragments in D.L. 2.9 and Hippolytus *Ref.* 1.8.12, which do speak of the initial growth of living beings.

On the view of Wolfsdorf that the views in this chapter and the next originally referred to the nourishments of plants rather than animals, but were transferred to the latter by A or his source, see our discussion above, section D(b), and on ch. 5.28 at Commentary D(e).

d Further Comments

Individual Points

§1[2] Wolfsdorf (2009) 34 n. 79 is right in translating the term ὑπόστασις with ‘settling down’, i.e. describing the process of digestion and food distribution in the body. It is also to be agreed that in [2] the reading of P^Q τοῦ ὑγροῦ is to be preferred above that of P^B τοῦ οἰχείου, since it is more natural to have ἑκατέρων in the next line refer to an elemental component. Usener’s conjecture τοῦ οἰχείου ὑγροῦ preserves both readings, but a reference to ‘its own moisture’ is less likely in the context of nourishment and growth (unless we translate ‘appropriate moisture’, referring to the process of ‘like to like’, in which case it would be more persuasive).

§2 ‘... but they become weak and sickly when there is much in them which decomposes.’ This may allude to a process of excessive digestion. The text on digestion in ps.Galen refers to ‘rubbing’ (Erasistratus) or ‘rotting’ (Empedocles), but there is no mention of what happens when this process goes wrong.

Commentary

A *Witnesses*

For this chapter only a single lemma is preserved in the tradition of P. Like in the previous chapter the name-label is again Empedocles. In P^B its final part is mutilated. As also occurs in A 5.27.2 and 5.29.1–3, Q has a fuller text. Clearly the final part of the archetype of the Byzantine mss. of P was defective.

A lemma with the name-labels Parmenides and Empedocles which contains an abridged but very similar doxa on the theme of ὄρεξις (in the singular) is found among the doxai of ch. 4.9 on sense-perception in S ch. 50 Περί αἰσθήσεως καὶ αἰσθητῶν καὶ εἰ ἀληθεῖς αἰ αἰσθήσεις (preserved only in the ms. L). Diels retained it in ch. 4.9 without comment, adding three asterisks to indicate that it was incomplete. The interpretation of this fragment is fraught with difficulties. See further the analysis below in section D(c).

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The only text that we can relate to this tradition is at ps.Galen *Def.Med.* 99, but its definition of ὄρεξις refers to food (and drink) without any reference to physiological processes (or to doxographical material).

(2) *Sources.* Although Empedocles is cited quite often in Aristotle's writings on the soul and its phenomena, this does not occur in relation to the themes of desire, pleasure or pain. On the other hand, Theophrastus' account of his views in the opusculum *De sensibus* (§§7–24) contains three passages in which pleasure and pain (as well as knowing and not knowing) are explained through the categories of the similar and the dissimilar (texts below section E(b) §1). These recur in the second half of the doxa in explaining pleasures and annoyances. However, the physiological aspect emphasized by A is not found in this text. See further our discussion of the reconstruction of the sources of the chapter by Wolfsdorf (2009) in section D(e) below. A similar account of craving for food and drink involving the deficiency of moisture (so only one of the elements) is found in a treatise in the Hippocratic corpus (by the same author who wrote *Genit.* and *Nat.Puer.*), namely *Morb.* 4.39, text below section E(b) General texts.

C *Chapter Heading*

For chapter headings containing πόθεν plus γίγνομαι indicating the psychological, biological or physiological source, i.e. the cause, of a phenomenon see ch. 4.21 Πόθεν αἰσθητικὴ γίνεται ἢ ψυχὴ καὶ τί αὐτῆς τὸ ἡγεμονικόν and ch. 5.11 Πόθεν γίνονται τῶν γονέων αἰ ὁμοιώσεις ἢ τῶν προγόνων. It should be noted that the heading explicitly refers to τὰ ζῶα, continuing the broader scope of the previous

chapter. As we have continually noted throughout Book 5, the doxography prevaricates on whether it focuses on living beings in general or more particularly on human beings.

D Analysis

a Context

The subject follows on logically from the previous chapter. The crucial role of nourishment for the growth of living beings entails that they must have a process whereby they feel the impulse to take in such nourishment, and this is provided by desire (or more specifically appetite, the usual term in relation to food), which in turn is linked to feelings of pleasure (i.e. enjoying one's food, satiety) and annoyance (i.e. hunger). The subject of appetite is not discussed elsewhere in the *Placita* (incidental references at A 4.22.3[25] on breathing and 5.5.1 on female desire for sex). But the subject of pleasure and pain was briefly dealt with at A 4.9.12–17 as part of the chapter on whether sensations and impressions are true (since pleasure and pain involve αἰσθησις, i.e. *internal* perception). The doxa on Empedocles at A 4.9.15 differs from the one in this chapter in being quite general, i.e. not focused on nourishment, as is the implication of the context here, and also articulating the principle of like by like more explicitly. The parallel doxa in ps.Galen *Def.Med.* focuses explicitly on appetite for food and drink.

b Number–Order of Lemmata

The tradition of P has only the single lemma. But the original version in A, we may safely assume, will have had further views which have been lost in P's abridged version. The second lemma furnished by S points in this direction. It appears to be a compact summary of the first, but with two essential differences: (a) it has the additional name-label Parmenides; (b) it relates the lack that causes appetite explicitly to nourishment (τροφή). Parmenides' view must have been coupled with that of Empedocles in the original version of the chapter, or was a very similar doxa which S coalesced. We note that Theophrastus *Sens.* 1 names Parmenides, Empedocles and Plato together as explaining sensation through similarity (as opposed to dissimilarity).

The second doxa can thus best be regarded as for the most part a doublet of the first, doubtless deriving from S's version of the chapters 5.27 & 28. But because it contains extra information, it must be included in our text.

c Rationale–Structure of Chapter

There is little further to be said about this truncated chapter with (effectively) its single lemma except to emphasise that, by mentioning the role of the ele-

ments in appetite and privileging the role of moisture in pleasure, A continues the physiological emphasis of Book 5. The role of the elements is central to Aristotle's critique of Empedocles' psychology at *de An.* 1.5 410a22–b16. In the parallel passage on Empedocles at A 4.9.15 there is no mention of the moist, but the mixture of the elements is mentioned to explain pains.

d Further Comments

Individual Points

§1 The text of the second half of the doxa on pleasures and pains is very uncertain. In P^B *pace* Bollack (1965–1969) 3.468 it is clearly corrupt. The reference to 'dangers' is inappropriate in the context. Diels and earlier scholars attempted to restore it in the light of the parallel text A 4.9.15, a very understandable step to take; see *DG* app. to 440a19. However, they did not have access to the evidence in Q. Instead of τὰς τῶν κινδύνων ... κινήσεις, Q refers to *Wachstumsbewegungen*, i.e. τὰς τῆς αὐξήσεως ... κινήσεις. The genitive τῶν ὁμοίων would appear to be dependent on τῆς αὐξήσεως. It is qualified by the phrase *in der Art* which can be rendered γένει (but there are no good parallels in A). In our text we have printed a retranslation from Q, bearing in mind that here his text is better preserved than in the Greek mss. As for the final phrase explaining the occurrence of 'annoyances' (ὀχλήσεις as a synonym for 'pains' (λύπαι), cf. ἀλγηδónας in ch. 4.9.15), we have to determine what Q's *im Berühren und Zusammentreffen* will have rendered. In our text we follow the suggestion of Wolfsdorf (2009) 31 to base the reconstruction of the final phrase on the parallel text in A 4.9.15, changing σύγκρισιν and κράσιν to the plural to correlate with the article τὰς in the Greek mss. and the plural nouns in Q.

e Other Evidence

In his detailed analysis of this chapter Wolfsdorf (2009) makes three claims regarding its relation to earlier traditions (see esp. p. 34 and the stemma on p. 43):

(1) A has combined separate anterior traditions for the topic of desire and for the topic of pleasure and pain.

(2) The latter is clearly derived ultimately from Theophrastus' *Sens.* and before him Aristotle's *de An.* The former has a different source trajectory via Aristotle's lost *Plant.* and *Eth.Nic.*, and prior to these works, Plato's *Lysis*.

(3) His report on Empedocles' views on desire and pleasure was derived from doxographical material on plants rather than on animals, even if he himself may have placed them in a chapter that refers to these subjects in animals (or living beings in general).

These interpretations make too much of the very limited evidence and can by no means be regarded as certain. The role of Theophrastus *Sens.* is not in dispute. However, for the topic of desire Wolfsdorf himself admits (p. 19) that the doxographical record is defective. Although we have printed the texts he cites below in section E(b) under §1, it is apparent that they are not specific enough to be regarded as sources for A's doxa on ὄρεξις, leaving aside the problem that the doxa itself (i.e. its first part) makes no reference to what is similar or dissimilar. It is true that Nicolaus of Damascus' doxography on plants states that they are influenced by desire and also experience pleasure, but it is a mighty leap to conclude that it is this text that inspired A, who consequently transferred this contents to living beings in general. Wolfsdorf p. 45 notes that there may have been intermediate sources involved, but nevertheless maintains that ultimately the view comes from Aristotle's *Plant.* He ends his analysis of the doxographical tradition with some valuable remarks on the role of diaeresis, which is clearly present in the passage from Plato's *Lysis* which he cites. Of course it must be recognised that the role of the diaeresis is crucial for the method that A uses throughout his work. But for a diaeresis at least two opinions are required, and this is precisely what we do not have in this effectively monolemmatic chapter.

Commentary

A *Witnesses*

The evidence for this chapter is confined to the tradition of P. It would appear that S did not include any material from it in his anthology. P^B only has two lemmata, of which the first and longer one is truncated at the end. As is apparent from the other chapters at the end of Book 5, the archetype of this Byzantine tradition must have been damaged towards the end of the manuscript. The evidence of Q is particularly important for this chapter. The Arabic translation completes the truncated first lemma, adds a second half to the second lemma, and adds a complete third lemma with the name-label Herophilus (completely missing in P^B). Q's evidence is complemented by that of G. He includes the third doxa attributed to Herophilus (although the name-label that is transmitted in his text is Herodotus), thereby confirming Q's evidence. However, all three of his doxai are considerably abridged in comparison to what we find in Q. In addition his versions for the second and third lemma differ in terms of content from the longer versions in Q. As in previous chapters (and in ch. 5.30) G and Q supply material at the end of the work that later became missing in the mss. tradition of P. This material is completely missing in the texts of Mau and Lachenaud, who apparently failed to realise that these texts complement the Byzantine mss. of P.

B Proximate Tradition and Sources

(1) *Proximate tradition.* The contents of this chapter, with its focus on fourth and third century physicians has some parallels in other doxographical works. The three definitions for fever found in ps.Galen's compendium of medical definitions are quite different from that of Erasistratus with which the chapter opens. He does, however, use the distinctive term ἐπιγένημα in his definition of σύμπτωμα (see texts below section E(a) Definitions). In the second or third cent. CE ps.Galenic treatise *Introductio sive medicus* ch. 13 the view that fever is an affection (πάθος, cf. 4.23) is attributed to 'the ancients' and is contrasted in sound doxographical style with the view of 'Erasistratus and some younger (doctors)' that fever is an ἐπιγένημα. But the account and definition of fever attributed to them, which focus on the role of heat, bear no resemblance to A's explanation. A little-known definition-cum-doxography is found in a small treatise on fevers under the name of 'the doctor' Alexander of Aphrodisias, attributing the definition to 'Empedocles, Zeno and the majority of the Hippocrateans.' Though not calling fever a πάθος, the content resembles the various definitions in ps.Galen *Def.Med.*, but the mention of the names of philosophers suggests a doxographical origin. Another interesting text is found in ps.Soranus *Quaestiones medicinales*, in a section only preserved in the ms. Carnotensis 62; see Van der Eijk (2000–2001) 2.128, who notes: 'It is almost certain that the present report is derived from a tradition of *quaestiones* or *definitiones* literature, although the present section is not preserved in Pseudo-Galen's *Definitiones medicae*.' The quaestio asked is 'what different causes of fevers did the ancients state?' The views of no less than 10 authors or groups are cited, although not all of them specifically mention fevers; see the text below section E(a) General texts. The view of Erasistratus given there is a more compact version of what we find in A.

As the evidence of the Anon. Londiniensis and the Anon. Parisinus shows, there were extensive doxographies on medical subjects; on this background see further Runia (1999a) 237–245. It is probable that A or the tradition he draws on has made use of such material and incorporated a very small amount of it in his treatment of physiological subjects. On ancient medical doxography in general see further the essays collected in Van der Eijk (1999a).

(2) *Sources.* Fever as a widely occurring physiological phenomenon attracted the interest of early Greek *physiologi*. A treatise on fever is recorded among the 'technical' writings of Democritus (68A33 XIII 7 DK). As noted above, some philosophers—Empedocles, Democritus, Strato, Zeno—are briefly mentioned in medical doxographies in ps.Soranus and ps.Alexander; see texts below section E(a). But there was little, it seems, for later doxographers to make use of. In Plato it is briefly explained in terms of elemental excesses in *Tim.* 86a, for

which he is mildly criticized by Galen *PHP* 8.4.18 because he ignored the true cause, i.e. the role of the humours; see further Taylor (1928) 607–610. In the Aristotelian corpus discussions on aspects of fever are confined to the *Problemata*. It is doubtless not a coincidence that this is the only chapter in A's compendium to consist solely of doxai attributed to physicians. On fevers in ancient medicine see Pellegrin (1988), Nutton (2004) 31–32; a wide-ranging overview of the place of fever in ancient culture is given in Horn (1969).

C Chapter Heading

The chapter heading combines two subjects in relation to the theme of fever, firstly its cause, and secondly whether it is an 'after-symptom', i.e. supervenient upon the affection (and thus not its cause). The first part uses the familiar $\pi\omega\varsigma \gamma\acute{\iota}\nu\epsilon\tau\alpha\iota$ x formula, on which see further ch. 5.2 Commentary C. The second part again turns to the $\epsilon\acute{\iota}$ x (sc. $\acute{\epsilon}\sigma\tau\acute{\iota}$) formula, which was also used in chs. 5.4–5, 19, 20 and 26 (see further ch. 5.26 Commentary C). It invites a response in terms of affirmation or negation, as indeed occurs in this chapter.

D Analysis

a Context

As noted above, this is the only chapter in the work that has a specifically medical subject. Its inclusion is perhaps not as surprising as its position, since it precedes the discussion of health and disease in the final chapter 5.30.

b Number–Order of Lemmata

Only three doxai are preserved. It could be argued that there might have been a fuller list on account of the absence of any Presocratic theories. But see our comments above in section B(b). The second question posed in the heading invites either a positive or a negative answer (or perhaps a compromise), so a limited number of doxai might be expected (cf. for example chs. 5.4 and 5.5 also with three doxai each).

c Rationale–Structure of Chapter

The three doxai are linked together in a tight structure. In the first doxa attributed to Erasistratus we are explicitly told that a definition of fever has been formulated. For similar use of the verbs $\acute{o}\rho\acute{\iota}\zeta\epsilon\tau\alpha\iota$ / $\acute{o}\rho\acute{\iota}\zeta\omicron\nu\tau\alpha\iota$ see A 1.6.1, 4.8.1 (both *oratio recta* as here), 4.19.1 (*oratio obliqua*), and in general on definition in the *Placita* ch. 1.9 Commentary D(d) General points. All three parallels occur at the beginning of the chapter (as is also the case for definitions that are not formally introduced, e.g. at chs. 1.9–12, 1.14–15, 1.23). The definition is specific, so does not introduce the subject, but already explains how fever occurs, i.e. the

first question raised in the chapter. The second part of the doxa then provides an answer to the second topic, i.e. whether fever is an after-symptom, which Erasistratus answers in the affirmative. His view is introduced with the phrase ἀρέσκει δ' αὐτῷ, which occurs in A elsewhere only at 1.7.21[101] (on Xenocrates, also towards the end of a long lemma), but is very common in the fragments of Arius Didymus (see M–R 1.250, 3.323). To judge by the Arabic translation, a swelling caused by the accumulation of *pneuma* in its vessels (ἄγγεια; this is what *Werkzeugen* must refer to), exacerbated by what nourishes it, gives rise to the fever. The reason for the opinion thus refers back to the earlier definition.

The second doxa attributed to Diocles amounts to an additional affirmation of the view of Erasistratus that fever is an ἐπιγένημα. Diocles is recorded as quoting the well-known apophthegm ‘the appearances are the sight of what is unclear’. This saying is recorded as having been used by Anaxagoras and (it seems) Democritus; see S.E. *M.* 7.140 (text below Section E(b)§2), Diller (1932) 16, 37. As Van der Eijk (2000–2001, 2.123) remarks, there is no *a priori* reason to doubt the assertion that Diocles cited the saying (he is known to have written a book on fevers, cf. fr. 73 Van der Eijk). However, as the same scholar notes, it is not easy to understand the exact purport of the addition in the Arabic translation, since a swelling is surely a visible element (as opposed to nourishment or an invisible hot body). The reduced doxa in G, which does not include the saying, is much more straightforward: fever is after-symptom of the visible symptoms of injuries or sickness in the form of wounds and swellings. It is likely that Q is mistaken here, but we have decided to include his text as evidence of the damaged text.

The third lemma has the name-label Herophilus and survives in full (it would seem) only in Q. Fever is not an ἐπιγένημα but rather precedes the observed phenomena of swellings and boils. Its own cause, however, may not be clear. Herophilus’ doxa thus takes the opposed view in the diaphonia in response to the ἐἰ question in the chapter heading: fever is not an ἐπιγένημα but precedes the visible symptoms. Its response to the first part of the chapter’s subject is that the cause is not apparent. As Von Staden (1989, 302) notes, in this statement ‘Herophilus’ cautious, sceptical strain breaks through’. It should be observed that here too the version of G differs from Q: *sometimes* no cause precedes the fever. Again it appears to be a simplification of what originally stood in A.

We conclude, therefore, that the chapter thus focuses more on the second part of its double subject than the first. It has a simple dialectical structure *pro et contra*, with §1 affirming the thesis (supported by §2) and §3 opposing it. As often in Book 5, the doxai have been extended in length in order to include physiological aspects of the subject. Due to the imperfect transmission, however, the exact meaning is not fully clear. Finally it is to be noted that the

most common aetiology of fever in antiquity, i.e. the mismanagement of the bodily humours (cf. Pellegrin 1988) is absent in our chapter.

d Further Comments

General Points

Diocles' doxa in both P^B and G shows how the technical term ἐπιγέννημα is developed from the verb ἐπιγίγνομαι. The term itself appears to have been first developed in philosophical contexts. It occurs in the Stoic doxography at D.L. 7.86 to describe pleasure (ἡδονή) as supervenient upon what nature has supplied to a creature for its constitution (cf. also 7.94, 95). In Philo *Det.* 124 joy is an after-product of wisdom. In medical authors it does not occur in extant texts before Galen, where however it is found only four times (three in *De symptomatum differentiis liber*; see below, section E(b) General texts for one example). So it is not likely that the physicians cited in this chapter would have used the term. The doxographer, as he often does, is using later terminology in order to clarify (and simplify) earlier doctrine.

Individual Points

§1 In the analogy between wind at sea and blood in the body, the word order means that the expression παρὰ φύσιν is more naturally taken with the previous phrase than the one that follows (in the latter case it would normally follow τότε). So on the basis of the analogy, it is the action of the blood that is 'contrary to nature', not the fever. This is consistent with the statement that it is an after-symptom. Lachenaud errs, therefore, in placing the comma after βιαίου.

§2 Although δέ is often a strong adversative introducing an opposed opinion, it does not do so in this case. The view of Diocles supports that of Erasistratus. So we should translate 'and'.

§3 The erroneous name-label Herodotus in G is strange, because it is correctly transmitted in §§103, 106 and 119 and the context is clearly medical. It is almost certainly a scribal error based on an incorrect interpretation of an abbreviation. The name-label Herodotus occurs in §89 (= A 4.1) where it is obviously correct.

Commentary

A *Witnesses*

The final chapter of the work is preserved in more witnesses than is usual for the contents of Book 5.

(1) P^B appears to preserve five lemmata, but Q has an extra name-label for the second part of P^B's first doxa and so has six lemmata. This divergence of attribution will be scrutinised in section D(b) below. The final four lemmata are retained by G, but he divides the chapter into two separate chapters—two doxai in a chapter on diseases and the remaining two in a chapter on old age. Ps paraphrases the contents of the first three doxai in *De omnifaria doctrina*, removing the name-labels. But in a little known text published by Boissonade in 1838 (missing in the *TLG*) he copies out verbatim the entire chapter as he found it in P. The text resembles P^B and does not have the additional name-label in §2 as supplied by Q (Herophilus) and in §6 (καὶ οἱ ἱατροὶ συμ-φώνως).

(2) Five lemmata from this chapter are also found scattered in S, one of which has the name-label Parmenides and is missing in P. Remarkably these texts are found not in the *Eclogae* but in the *Florilegium*, where they are located in the chapters on disease (4.36), health (4.37) and old age (4.50). P^B's first lemma on Alcmaeon (i.e. §§1–2) is split in two, with the first part at 4.37.2 (i.e. §1), the second part (i.e. §2) in the previous chapter at 4.36.29. The Diocles doxa is recorded at 4.36.30 in an abridged form, while the lemma on Erasistratus does not reproduce the doxa as found in P but seemingly gives a brief statement which provides the gist of his view. The remaining doxa at 4.50.30 has the name-label Parmenides and is suspiciously similar to the doxa of the Stoics and doctors (§5) in P but missing in S. These five lemmata constitute the only material from A found in the second half of S's mighty anthology (see M–R 1.198). The additional doxa compared with the tradition of P shows, if proof were needed, that this material was not drawn from P. Perhaps the fact that this material is used in a different context in the *Anthology* explains the cavalier way that S has made use of it.

B *Proximate Tradition and Sources*

(1) *Proximate tradition.* The material in this chapter bears a generic resemblance to definitions of health, disease and old age in ps.Galen's *Def.Med.* (note in his first definition of health the term δυνάμεις and the prominent role of the four bodily 'elements' heat cold moisture and dryness). Its contents correspond to generally held doctrines held on these subjects in antiquity, e.g. that health is caused by the balance or symmetry of the elements or qualities of the body,

whereas disease results from their imbalance, and that old age is caused by the deficit of heat and moisture in favour of cold and dryness.

The only significant doxographical parallels citing early thinkers are found in the Anonymus Londiniensis, which has as its main subject the causes of disease (on this text see further above ch. 5.22 Commentary B). At the outset it is stated that there is conflict (στάσις) on the subject of disease, some saying it comes from the ‘residues of food’, others from the elements (of the body) (4.26–28). Thereafter a number of reports of early physicians such as Hippocrates, Petron of Aegina and Philistion record the views on health and disease (text below section E(a) General texts). But there are no direct connections with the doxai in A. It does not refer at all to Alcmaeon or Diocles, and the various references to Erasistratus do not deal with this subject (fr. 58–60, 83, 87 Garofalo, now available with an improved text in the edition of the papyrus by Manetti 2011).

(2) *Sources*. The subjects of this chapter are less specifically medical than that of the previous one. There would have been little difficulty for doxographers to locate material in the writings of the Presocratics, though little has filtered down to A (only §5 in what remains in P). Plato in the *Timaeus* provides a theory explaining old age (82d) and allots an important section to bodily disease (81e–86b) and to health involving both body and soul (87c–89c). Aristotle gives a medical definition of health at *Top.* 145b8, but does not devote a specific discussion to it (the promised treatises *Περὶ νόσου καὶ ὑγείας*, if written, did not survive, as noted by Alexander, text below section E(b) Chapter heading). In the *Parva naturalia*, however, there are separate brief treatises on youth and old age. Treatises on old age are recorded for three Peripatetic authors, Theophrastus, Demetrius of Phalerum and Aristo of Ceos, but surprisingly there is no trace of Stoic treatises on the subject (cf. §6). However, a text of Chrysippus quoted verbatim by Galen shows that the Stoa too made use of general ideas on health and disease as outlined above. Another interesting text from the same author (*PHP* 5.3.18) points out that the definition of health involving *συμμετρία* is used by various philosophers, even though they have quite different ideas about what it is a symmetry of. The list starts with Asclepiades and his doctrine of masses and pores (cf. §7). Cicero’s celebrated work *De senectute*, though referring to the treatise of Aristo, does not discuss the physiological aspects of the topic, but rather presents a debate on the advantages and disadvantages of becoming old (the same method adopted by Stobaeus in *Flor.* 4.50).

C Chapter Heading

The chapter headings are of the simple umbrella type, corresponding to the titles of works or treatments of the subjects in the earlier tradition as was noted above. P^B, Q and Ps (in *Omn. Doctr.* only) agree on the heading with three terms,

Περὶ ὑγείας καὶ νόσου καὶ γήρωος. G deviates by dividing the chapter into two and giving the former the chapter heading Περὶ νόσων (note the plural), the latter Περὶ γήρωος. On this division, which we do not follow, see further below section D(b). S uses the three headings and expands them in each case (listed in the app. crit. above).

D Analysis

a Context

The general treatment of health and disease follows on from the chapters on animal and human physiology, the same sequence that also occurs in Plato's *Timaeus*. It might have been more logical to place it before the chapter on fevers, which is clearly a medical subject. However, placement after the chapter on fevers can be understood if that topic is still regarded as part of physiology, whereas health and disease are in a sense meta-subjects that discuss when physiological processes go right or wrong, i.e. κατὰ φύσιν or παρὰ φύσιν.

The final topic of old age is linked to that of health and disease, because the process used to explain it, involving the balance of the heat and cold, is similar. It is the final stage of the ages of the human being introduced in ch. 5.23. It brings the work to a fitting close, though an alternative might have been to have a chapter on death (already treated in chs. 5.24–25).

Aristotle at the beginning of *De sensu*, which follows on from *De anima* in the *Parva naturalia*, makes the following observation (1 436a17–b1): 'It is the task of the natural scientist to study the first principles of health and disease, for neither health nor disease can occur in things deprived of life. Hence it can be said of the majority of natural philosophers and of those doctors who adopt a more philosophical approach to their art, that the former end with a discussion on medical subjects, while the latter begin their medical discourse with the principles of natural science.' The same point is made at greater length in the final paragraph of the *Parva naturalia* at *Resp.* 21 480b21–30. As Mansfeld (1990a) 3059 notes, this observation is very pertinent to the structure of Book 5 of the *Placita*, which ends with a treatment of health and disease and of old age. Old age of course shares some of the characteristics of ill-health and leads inexorably to death. A parallel can be drawn with the poem of Lucretius, which ends with the dramatic occurrence of the plague and the many deaths that accompanied it.

b Number–Order of Lemmata

The transmission of this chapter by the four witnesses of the P tradition and by S give rise to a number of thorny questions, not all of which can be fully resolved.

(1) The single chapter in P^B and Q has been divided into two chapters in G and spread out over three chapters in S's *Florilegium*. It is plain that the subjects of health and disease belong together because they are treated as such in §§1–4. The topic of old age is treated separately in §§5–7, with no specific reference to health or disease. G's move to separate the doxai on old age is very understandable, since the connection with the first half of the chapter is not strong (but does exist, as we shall see below). Since the textual transmission of the final chapters is poor, it might be argued that G preserves the original chapter division of P (and therefore of A). Elsewhere (e.g. chs. 2.32, 4.20–21), A does sometimes combine related subjects. But since there are no decisive arguments either way, we have retained the single chapter as found in P^{BQ} and Ps.

(2) In the Byzantine mss. and Ps the chapter commences with a single long doxa attributed to Alcmaeon only. But as we have seen, it is split in two in Q's translation, with the name-label Herophilus attached to the second part. S also splits it in two, but in the mss. the name Alcmaeon is attached to both, allowing us to assume that (like P^B) he did not have the name of Herophilus in his text of A. A further difficulty arises when we try to determine the original text in A for the beginning of the second half of the doxa. The variants are as follows (G does not have this lemma):

- P^B καὶ νόσων αἰτία
 Q *Herophilos glaubte, die Krankheiten werden entweder (infolge der Ursache) welche 'dadurch' genannt wird ...*
 Ps καὶ νόσον συμπίπτειν
 S λέγει δὲ τὰς νόσους συμπίπτειν

There is strong convergence between Q and S (the words λέγει δέ will have been added by the latter), so that the reading τὰς νόσους συμπίπτειν can hardly be doubted (and that of P^B must be rejected). The additional convergence of Ps and S is remarkable and difficult to explain, unless the learned Ps also had access to S. However, as we have seen, only Q has the name-label Herophilus. Daiber ad loc. suggests the name may have been a 'Randnotiz' of a scribe that found its way into the text. From the formal point of view, there are certainly arguments for retaining the single name-label. However, this does not take into account the content of the text, to which we return in section D(c).

(3) The extra lemma in S with the name-label Parmenides is very similar to the fifth in P and may well rouse suspicion, i.e. that S and P between them have separated out a single doxa. This depends on how one interprets the adverb συμφώνως. But the grounds for coalescing the two lemmata are insufficient. See

further below, section D(a) under detailed comments. The lemma can only be located where Diels placed it, i.e. before the first doxa in P on old age attributed to the Stoics (and the physicians in G).

(4) It is impossible to determine whether the chapter is complete as it has come down to us. One might have expected a summary of Plato's distinctive views on all three subjects. If such views were present in A, one would have expected S to include them. But two extracts from such passages are found at *Flor.* 4.37.26 (on health) and 4.50.21 and these may have displaced material from A.

c Rationale–Structure of Chapter

As already noted, the chapter divides into two parts, the former treating the subject of health and disease, the latter that of old age.

The first part commences with a doxa attributed to Alcmaeon. As a purported Pythagorean philosopher with psychological and physiological interests (but not a doctor) he is prominent in both books 4 and 5 (A 4.2.2, 4.16.2, 4.17.1, 4.18.1, 5.3.3, 5.14.1, 5.17.3, 5.24.1, 5.30.1). The doxa commences with the causes of health first (αἰτία to be understood with συνεκτική), followed by those of disease. The aetiology in terms of equilibrium (ισονομία) and predominance (μοναρχία), both overtly political terms, is noteworthy and has been the subject of much scholarly discussion. See now the full discussion in Mansfeld (2013c). He shows that the idea of a balance (or lack thereof) of forces is found in the Hippocratic corpus and that the concept of a good blending or symmetry of elements in the body is common in both philosophical (Aristotle, the Stoa) and medical sources (Anon. Londiniensis, ps.Galen); we give a selection of texts below section E(a)&(b)). But these two terms in the doxa are unusual. Mansfeld argues that they reflect the influence of the celebrated discussion on the best political constitution in Herodotus 3.80–83. He does not rule out that the terms might be based on a quote from Alcmaeon's original book, but thinks it more likely that they derive from a later period. The prominence given to the four qualities (moist, dry, cold, hot), here called δυνάμεις, should be noted. In many texts they are regarded as the prime explanatory factors of health. The text adds 'bitter and sweet', but unlike the first definition in ps.Galen, does not mention the primary humours (χυμοί).

The next doxa (assuming as we do that it is separate) treats diseases first at some length and follows at the end with a definition of health. Its formulation is more overtly philosophical and also more wide-ranging, covering not only qualities (heat and cold are mentioned), but also material factors and places where disease may occur. What is particularly striking is the use of prepositional phrases to indicate causal and other factors (ὅφ' οὐ, ἐξ οὐ, ἐν οἷς). These

are reminiscent of ‘prepositional metaphysics’ (on this see A 1.11, where they dominate the discussion on causes; see Commentary C, D(d) on §2). Though the extensive use of these formulas commences from the first cent. CE onwards (see Runia 1986, 171–174), they certainly go back to Aristotle and the Peripatos, e.g. at *Met. Z.7* 1032a16–20. That Alcmaeon would have used these formulas is of course out of the question.

In his monumental edition of the remains of Herophilus’ writings Von Staden (1989) does not make any reference to this text, of which he seems to have been unaware. But recently Leith (2014) in an article on causality in Didorus Cronus and Herophilus argues strongly in favour of the attribution to the Alexandrian doctor (cf. also Leith 2015, 486–487). He offers three arguments:

- (1) The contents of the second part correspond precisely with a quotation from Herophilus in Galen (T59a Von Staden) which refers to heating, cooling and being filled with food and drink in the context of the causation of disease. This parallelism (already noted at M–R 1.157) supports authenticity.
- (2) Given that the views on causation in the two parts are very different, it is very unlikely that the Arabic translator would have introduced an obscure name such as Herophilus if it was not already in the Greek text before him.
- (3) The Peripatetic flavour of the second part is particularly appropriate to Herophilus, since the Peripatos was the dominant philosophical influence on early Alexandria. The distinction between efficient and material cause is Aristotelian. This schema is quite different from that which became dominant from the first cent. BCE onwards, which was based on a Stoic inspired distinction between ‘cohesive’ (συνεκτικαί, used in the Alcmaeon doxa), ‘preceding’ (προηγούμεναι) and ‘antecedent’ (προκαταρκτικαί) causes. In addition, the candidates given for the causes (excess of hot and cold) cohere well with Aristotelian views regarding intake and digestion of food as leading factors in the causation of disease.

We regard these arguments as persuasive. When added to our comments at M–R 1.157 (but from which Runia 1999, 249–250 = M–R 3.574–575 deviates) and to Mansfeld (2013c) 79 n. 6 = (2018d) 264 n. 6, they tip the scales against the formal considerations discussed above. The name-label should be accepted as authentic.

The remaining two lemmata in the first part are attributed to the physicians Diocles and Erasistratus. The Diocles doxa focuses on disease only, but in its content does not differ a great deal from the previous ones. ἀνωμαλία is now given as the opposite to ἰσονομία or συμμετρία, στοιχεῖα replace δυνάμεις and ποιὰ, and an additional factor of the air (as source of contagion?) is added. The last factor recalls a diaeresis attributed to Philistion in the Anon. Londiniensis,

where it is stated that diseases can come from the elements, from the disposition of bodies, or from external factors (text below, section E(a) General texts). As Van der Eijk (2000–2001) 2.112 notes, the phrase ‘most diseases’ indicates there could be other causes, but these are not elaborated.

The final lemma on disease and health, representing the view of Erasistratus, does not refer to bodily constituents, but privileges the role of excessive food in causing disease and can be linked to the earlier mention of *πλήθος τροφῆς* as the *ἐξ οὗ* factor in Herophilus. The causes given for health, *εὐταξία* and *αὐτάρχεια*, are very general, without any reference to elements or other factors. Taken all together the four doxai amount to a list of similar pronouncements, covering a variety of factors, prime among which are qualities, elements and food. Mansfeld (2013c) 83 argues for a diaeresis between natural forces and ways of behaving, as found at Anon.Lond. col. iv.25–28 Manetti, but this is undercut by the combination of both factors in the doxa of Herophilus.

The second part also lacks effective contrasts. The doxa attributed to Parmenides (supplied by S) gives the simplest of explanations for the ageing process, i.e. the deficiency of heat, not mentioning the role that could be played by the other qualities, e.g. the prevalence of cold and dryness. The next doxa, §5, attributed to the Stoics and physicians in general, does little more than repeat the previous view, as indicated by the adverb *συμφώνως*, which we take to refer back to the previous lemma (see detailed comment below).

The final lemma gives an interesting comparison between the short life of Ethiopians (30 years) and the longevity of Britons (120 years). The link with the two previous doxai is obvious, with a neat interplay between the role of heat (from an internal source conducive to having a long life, from an external source destructive of it) and of cold (from an external source conducive to a long life, internal cold not mentioned). A does not cite geographical material very often (chs. 3.17 and 4.1 are obvious exceptions). This is in contrast to a work such as ps.Arist. *De mundo*, which has a lengthy section (ch. 3) devoted to geography (but no detailed discussion of psychology or physiology at all).

The connection between the two parts of the chapter is furnished by the theme of deficiency of heat (and by implication the onset of cold) causing old age. Heat is one of the factors cited as the cause of health (if balanced with other elements) or of disease (if it gets the upper hand, cf. also fever in ch. 5.29). Old age thus shares some features that characterise disease, though it is not explicitly identified as being such. We should recall the prominence of heat and cold in the explanations of sleep and death in chs. 5.24–25 (esp. A 5.24.2, 5.25.4 Empedocles, 5.25.1 Aristotle, 5.25.3 Leucippus). However, A makes no connections with the subject of death in this chapter, even though it might have made an even more fitting end to the work as a whole than the subject of old age.

Our text therefore preserves the six lemmata as found in P^BQ and Ps, complemented by the additional lemma in S, which can only be located where Diels placed it, i.e. before the first doxa in P on old age attributed to the Stoics (and the physicians in G).

d Further Comments

Individual Points

§1 The term συνεκτικός in the context of causality is originally Stoic, as noted by Mansfeld (2013c) 79 and Leith (2014) 605. In the light of the definition given by Clement of Alexandria *Strom.* 8.9 (*SVF* 2.351), συνεκτικὸν δὲ ἐστὶν αἴτιον, οὗ παρόντος μένει τὸ ἀποτέλεσμα καὶ αἰρομένου αἵρεται, we prefer the translation ‘sustaining’ to ‘cohesive’ (Leith), i.e. if the balance of the powers is not maintained, then health cannot continue.

§3 The convergence of G and Q supports the inclusion of the mention of air in the text, despite its absence in P^B and S, and is rightly supported by Van der Eijk in his text and commentary. He notes (2000–2001, 2.112) that Diocles is quoted by Galen as emphasizing the role of the climatic and environmental forces in the occurrence of certain diseases (fr. 55ab).

§4 In his edition of the fragments of Erasistratus, Garofalo (1988) 123 understandably quotes the text of the doxa in a double column and for S places the words after ἔλεγε in inverted commas, presumably regarding it as a quotation. But it is unlikely that S could have had access to more information beyond what stood in A, so these words must be taken as a loose paraphrase.

§6 The adverb συμφώνως is ambiguous in the various forms in which the text has been transmitted. In P^B it must refer to the Stoics only. P^Q and G agree that the name-label was originally ‘the Stoics and the physicians’, but the adverb is not retained by G. So for P^Q it must refer to the two groups of thinkers together. If, however, the additional doxa from S is taken to precede P’s fourth lemma, then the adverb may be taken to refer to agreement between the thinkers mentioned in both lemmata. This is how Von Arnim interprets it at *SVF* 2.769. But in the only other passage where the adverb occurs, at A 2.29.7 it refers to a large group of philosophers, supporting the interpretation of P^Q, and that is how we have rendered the text in our translation. In any case, if we translate ‘are in agreement’, a backward reference to the previous doxa is not ruled out.

Aetius Placita
English Translation

User's Guide to the English Translation

The aim of this user's guide is to assist the reader who wishes to consult and make use of the English translation of the *Placita* that we have prepared. It essentially repeats what was said in section 6.6 of the General Introduction.

As we explained in the General Introduction, section 6.1, it was not possible on practical grounds to place the translation beside the Greek text of the edition. We decided to place it in Volume Four, which has two advantages, (1) that it can be collected together, and (2) that it can be consulted while the text and its apparatuses are being studied.

The translation aims to give an accurate picture of the original Greek. It thus tends towards the literal side, while trying to avoid veering towards language that is artificial or unidiomatic. It is important that users of the translation note the following conventions and practices:

(1) Words and phrases that have to be supplied in the Greek, when translated, are placed in parentheses.

(2) Name-labels are rendered in the usual Latinate forms of the names. For collective names, e.g. schools and groups, we aim at a uniform translation. A footnote will be added when this is not possible. Note the following translations of standard Greek phrases:

οἱ ἀπό τινος	the successors of X
τις καὶ οἱ ἀπ' αὐτοῦ	X and his successors
οἱ περὶ τινά	X and his followers.

For multiple name-labels we follow the Greek and preserve all cases of *asundereta*, i.e. not using commas and only translating conjunctions when present in the original. This of course is quite unnatural in English, but helpfully conveys the telegram style of the *Placita*.

(3) Conjectural additions to the transmitted text, when translated, are placed in angle brackets (just like in the text itself). Braces are also taken over from the text, indicating that we suspect that the text is not authentic or uncertain. An obelus (†) indicates a crux in the text, three asterisks a lacuna.

(4) Although we aim as far as possible to achieve consistent one for one renderings of Greek terms in English, this is not always possible because of the polyvalent meanings of certain words in both languages. Occasionally we add an asterisked footnote to explain a particular case.

(5) On some occasions it is best to use a transliterated equivalent of the Greek term. In such cases an English rendering of the term is added in parentheses, unless this is not needed, as in the case of the term *pneuma*.

(6) Only on rare occasions are alternative renderings supplied. These are placed in square brackets.

(7) Similarly, transliterated equivalents of Greek terms, indicated in parentheses, are usually only given for etymologies or plays on words.

(8) Greek adjectives with the suffix *-ειδής* are usually translated by the phrase 'like a' or with the suffix '-like', e.g. *σφαίροειδής* 'like a ball', *πυροειδής* 'fire-like'.

(9) Passages which are only preserved in the Arabic translation of Qusṭā ibn Lūqā are printed in italics. These are confined to chs. 1.21.2α and 5.27 & 29.

As announced in the General Introduction, section 6.7, the authors are committed to producing an *editio minor* of the new reconstructed text as soon as will be practically possible. Its main feature will be the Greek text and English translation on facing pages, allowing quick and convenient consultation.

Book 1 The Principles of Nature

AËTIUS
ON THE VIEWS (OF THE PHILOSOPHERS)

BOOK 1
in which the following chapter headings (are found):

- [Proem]
1. What 'nature' is
 2. In what way a principle and elements differ
 3. On principles, what they are
 4. How the cosmos was constituted
 5. Whether the All is unique
 6. From where human beings obtained a conception of gods
 7. Who the deity (is)
 8. On demons and heroes
 9. On matter
 10. On (the) idea
 11. On causes
 12. On bodies
 13. On minimal bodies
 14. On shapes
 15. On colours
 16. On cutting of bodies
 17. On mixing and blending
 18. On void
 19. On place
 20. On space
 21. On time
 22. On the substance of time
 23. On movement
 24. On coming to be and passing away
 25. On necessity
 26. On the substance of necessity
 27. On fate
 28. On the substance of fate
 29. On chance
 30. On nature

[Proem]

§1 Since our objective is to teach [or: hand down] the physical theory [or: theory of physics, account of nature], we believe it to be necessary to divide up the discipline of philosophy directly at the beginning, so that we may know what philosophy is and where in the order of its parts the detailed account of physics comes. (P₁)

§2 Now the Stoics said that wisdom is the knowledge of divine and human matters, while philosophy is the practice of an appropriate technique. There is (they say) just one virtue that is appropriate and supreme, while (below this) there are three virtues that are most generic, namely physical, ethical and logical (virtue). For this reason philosophy too consists of three parts: physics, ethics and logic. Physics is when we do research on the cosmos and the things within the cosmos, while ethics is the part that is thoroughly occupied with human life, and logic is the part concerned with discourse (*logos*), which they also call dialectic. (P₂)

§3 Aristotle and Theophrastus and almost all the Peripatetics divided philosophy as follows: the perfect man [or: complete human being] should both theorise about the things that are and perform the acts that must be done. This can also be understood from these considerations as well: when research takes place on whether the sun is a living being or not a living being, whether it is (fire, whether it is just as large) as it is seen to be, the person who does this research is theorising, for what is theorised about is nothing more than what is. Similarly research is done on whether the cosmos is infinite and whether there is anything outside the cosmos, for all these subjects are theoretical. On the other hand research is done on how one should live one's life and look after one's children and how to rule and how to legislate. All these matters are researched with a view to conduct, and the person who does this is a man of action. (P₃)

1.1 What 'Nature' Is (P)

§1 Since our proposal is to study what belongs to nature, I consider it necessary to make clear what in fact nature is. For it is absurd to attempt to speak on the subject of nature but not to know this very thing, the meaning of 'nature'. (P₁)

§2 Now according to Aristotle nature is the principle (*arche*) of movement and rest for the object in which it exists primarily and not incidentally. For all things that are visible, which are not the result of chance or necessity, are not divine and do not have such a (sc. divine) cause, are called 'natural' and have their own particular nature. Examples are earth, fire, water, air, plants, living beings. In addition there are also these occurrences: rains, hailstorms, thun-

derclaps, tornadoes, winds. These phenomena have a certain origin (*arche*), for each of them does not exist from everlasting, but comes to be from a certain origin (*arche*). They too, just like living beings and plants, have a beginning (*arche*) of generation. In these objects, therefore, nature is the principle (*archê*) (and) what is primary (*proton*). It is the principle (*arche*) of movement, and not only of movement, but also of rest, for all objects that have obtained a beginning (*arche*) of movement can also obtain an end. For this reason, therefore, nature is the principle (*arche*) of movement and of rest. (P2)

1.2 In What Way a Principle and Elements Differ (P,S)

§1 Aristotle and Plato and their followers believe that a principle and elements differ (from each other). (P1,S1)

§2 Thales of Miletus regards a principle and elements as the same thing. But there is an enormous difference between the two. For we say that the elements are composite, but that the principles are neither composites nor products. For example, we apply the term elements to earth, water, air and fire. But we speak of principles for this reason, (namely) that there is nothing prior (to them) from which they originate, since not this would then be a principle, but that from which it had originated. In the case of earth and water there is something from which they come to be, namely matter which is without shape or form, and also form which we call 'entelechy' and 'privation'. Thales is therefore mistaken when he says that water is (both) an element and a principle. (P2,S2)

1.3 On Principles, What They Are (P,cf.S)

§1 Thales the Milesian declared water to be (the) principle of the things that exist—this man appears to have commenced (the pursuit of) philosophy and from him the Ionic school of thought took its name, for there have been quite a number of Successions of philosophy; after practising philosophy in Egypt, he came to Miletus as a senior person—; he is the one who says that all things take their existence from water and all things are dissolved into water. He supposes this firstly from the fact that semen is the principle of all living beings and is moist. Hence it is likely that all things also have their principle from what is moist. Secondly (he supposes this) because it is by moisture that all the plants are nourished and bear fruit, while if they lack moisture they dry out. Thirdly

* On the translation of multiple name-labels see the User's guide to the translation.

(he supposes this) because the fire of the sun itself and of the heavenly bodies is also nourished by the exhalations of the waters, and this applies to the cosmos too. For this reason Homer too assumes this view on (the subject of) water (when he writes)

Ocean, who was (the) origin for all things. (P1,S2)

§2 Anaximander, the son of Praxiades, the Milesian says that the unlimited is the principle of the things that exist. For from this all things come into being and (back) to this all things perish. For this reason unlimited worlds are begotten and again perish (back) to that from which they originate. He also states the reason why it is without limit, namely that the underlying (process of) generation will never fail. He goes astray, therefore, when he declares matter (to be the principle), but neglects the efficient cause. For the unlimited is nothing else than matter. But the matter cannot be in a state of being actualised, unless the efficient (cause) has been postulated. (P2,S3)

§3 Anaximenes, the son of Eurystratus, the Milesian declared air to be (the) principle of the things that exist, for from this all things come to be and (back) to it they are dissolved again. 'Just as', he says, 'our soul, which is air, holds us together and dominates us, so also *pneuma* and air contain the entire cosmos'. (Air and *pneuma* are used synonymously). But this man too goes astray when he appears to compose the living beings out of simple and uniform air and *pneuma*, for it is impossible for matter to subsist as the single principle of the things that exist. Rather it is necessary also to postulate the efficient cause. For example, silver is not sufficient for the generation of the drinking cup, unless there is also the efficient (cause), namely the silversmith. And similarly in the case of bronze and wood and other (kinds of) matter. (P3,S6)

§4 Anaxagoras, the son of Hegesibulus, from Clazomenae declared the *homoiomereiai* ('things with like parts', 'uniform parts') to be principles of the things that exist. For it seemed to him most puzzling how anything could come to be from the non-existent and perish (back) to the non-existent. For instance, we consume simple and uniform food such as the bread of Demeter, and when we drink water. From this food the nourishment occurs of hair, veins, arteries, flesh, tendons, bones and the remaining parts (of the body). Since this (nourishment) occurs, it must be agreed that all the things (that result) are (already) present in the food we consume; and from the things that are present all things will grow and in that food there are particles that generate blood and tendons and bones and the other (parts), particles that are (only) observable by reason. For it is not necessary to refer everything to sense-perception in saying that bread and water produce these things, but in them the particles observable by reason are present. Therefore from the presence in the food of particles

similar to what is produced he called them *homoiomereiai* ('things with like parts') and declared them to be the principles of the things that exist. And the *homoiomereiai* are matter, while the efficient cause is the Intellect which brought all things to order. He begins (his treatise) as follows: 'Together were all things, but Intellect divided and ordered them', by 'things' meaning the realities (that exist). It must be admitted, therefore, that he coupled the artificer with the matter. (P4,S7)

§5 Archelaus, the son of Apollodorus, the Athenian (says the principle of the things that exist) is unlimited air and the density and rarefaction associated with it; of these the one is fire and the other water. (P5,S8)

§6 These are the men, therefore, who followed each other and comprised the above-mentioned Ionic philosophy (starting) from Thales. (P6,cf.S9)

§7 We next have another beginning: Pythagoras son of Mnesarchus from Samos, the first to call philosophy by this name, (declared) that the numbers and the relationships between them, which he also calls harmonies, are the principles, while the compounds from each of these, the so-called geometricals, are the elements.

[54] On the other hand (he places) the Monad and the Undeterminate Dyad among the principles. Of his principles, the one strives towards the efficient and formal cause, which is God the Intellect, the other towards the passive and material (cause), which is the visible cosmos.

[62] As for the nature of number, (he says) it is the decad; for all the Greeks and all the barbarians count up to the ten, and when they reach it they return back to the monad. And again, as for the number ten, he says, its power consists in the four and the tetrad. The cause is that, if one departing from the monad were to posit the numbers by addition, by advancing to the four one completes the number ten. (If, however, one goes beyond the number of the tetrad, one will also fall outside the ten.) For instance, if one were to posit one and two and to add three, and four to those, one will complete the number ten. The result is that number according to the Monad (is located) within the ten, but according to its (generative) power within the four. For this reason the Pythagoreans made the following pronouncement, regarding the tetrad as their strongest oath:

No, by him, who bestows on our soul the *tetraktys*,
possessing the fount of ever-flowing nature and its root.

[74] Our soul too, he says, is composed of the tetrad. For there are intellect, knowledge, opinion and sense-perception; from these every skill and every science originates, and (through them) we ourselves are rational. Now Intellect is

the Monad. Intellect contemplates in terms of the Monad. For example, if you take the numerous human beings, the individuals cannot (all) be perceived or grasped and are unlimited (in number), but this very thing is what we intelligize, the single human being only, which no one (fully) resembles. Similarly we intelligize the single horse only, but the individual (horses) are unlimited (in number). All of these are the forms and genera in accordance with the monads. Hence in the case of each of these, they also formulate the definition and speak of a rational living being or a living being that neighs. For this reason, therefore, the Intellect, by which we intelligize these things, is the Monad, and the Indeterminate Dyad is knowledge, and this is quite likely. After all, every demonstration and every proof involving knowledge, and in addition every syllogism, deduces what is in dispute and effortlessly demonstrates something else from agreed premises. Knowledge is the understanding of these (factors) and so could be (equated with) the Dyad. Opinion, taking its starting point from understanding, is the triad, and this is quite reasonable too, because opinion deals with multiplicity. The triad is plurality, as in the case of the 'thrice-blessed Danaans'. For this reason, therefore, he includes the triad. *** (P7,S12)

§8 The school of thought of these men has been named 'Italic' because Pythagoras taught in Italy, for he moved away from his native land Samos after he became displeased with the tyranny of Polycrates. (P14)

§9 Heraclitus and Hippasus from Metapontum (say that the) principle of all things is fire, for they state that all things originate from fire and all things terminate in fire; and when it is quenched, all things are formed into the cosmos. First its densest part is concentrated and becomes earth; then the earth is loosened by fire and naturally produces water, which (in turn) evaporates and becomes air. And then the cosmos and all the bodies (within it) are consumed again by fire in the conflagration. Principle (of the things that exist) therefore is fire, because all things (originate) from it; and it is the end as well, because all things are dissolved into it. (P8,S13)

§10 But Diogenes of Apollonia (says that the principle of the things that exist) is unlimited air. (S15)

§11 Xenophanes (says that the) principle of all things is the earth; for he writes in the work *On Nature*:

From earth all things (come) and in earth all things terminate. (S5)

§12 Philolaus the Pythagorean (says that the principles of the things that exist) are the limit and the unlimited. (S10)

§13 Leucippus the Milesian (says that the) principles and elements (of the things that exist) are the full and the void. (S17)

§14 Democritus (says that the principles of the things that exist) are the solids and the void. (S18,Tiv)

§15 Metrodorus, the son of Theocritus, from Chios (says that the principles of the things that exist) are the undivisibles and the void. (S14,Tv)

§16 Epicurus, the son of Neocles, the Athenian, who philosophised in the line of Democritus, said that the principles of the things that exist are bodies that are observable by reason, not containing any void, ungenerated, indestructible, unable to be crushed or have its parts modified or be qualitatively altered. These bodies are observable by reason; and they move with the void and throughout the void. The void itself is unlimited (in size), and the bodies are unlimited (in number). The bodies possess these three (characteristics), shape, size, weight. Democritus stated that there were two, size and shape, but Epicurus added to these a third, weight. 'For it is necessary', he says, 'that the bodies are moved by the blow caused by weight, since they will not be moved (sc. otherwise)'. The shapes of the atoms are incomprehensibly many, but not unlimited in number. They cannot have the form of a hook or a trident or a bracelet, for these shapes are easily crushed, whereas atoms are impassible and unable to be crushed. They have their individual shapes, which are observable by reason. The term 'atom' is used, not because it is a smallest particle, but because it cannot be cut, being as it is impassible and not containing any void. As a result, when he speaks of an atom, he means what is uncrushable and impassible, not containing any void. That there is such a thing as an atom is clear. For there are elements that always exist, that is to say figures (without void), and the unit. (Pg,S19, cf. Tvi)

§17 Ecphantus of Syracuse, one of the Pythagoreans, (says that the principles) of all things are the indivisible bodies and the void, for this man was the first to declare that the Pythagorean monads were corporeal. (S20,Tvii)

§18 Diodorus, with the surname Cronus, (says that the principles are) the unlimited partless bodies, those that are also called the least in size. They are unlimited in number, but bounded in size. (S23)

§19 Empedocles, the son of Meton, from Agrigentum says that (there are) four elements, fire air water earth, and two principal powers, Love and Strife, of which the former is unifying, the latter divisive. He speaks as follows:

Hear first about the four foundational roots of all things,
clear-bright Zeus and life-bearing Hera and Aidoneus,
and Nestis, who with her tears dampens the mortal wellspring.

By 'Zeus' he means the seething heat and the ether, by 'life-bearing Hera' the air, by 'Aidoneus' the earth, and by 'Nestis' and the 'mortal wellspring' for example semen and water. (P10,cf.S1)

§20 Socrates, the son of Sophroniscus, the Athenian and Plato, the son of Aristo, the Athenian—after all, the opinions of each of them are the same on every matter—say that there are three principles: god, matter, idea, (these being equivalent to) by whom, out of which, towards which. The god is the Intellect of the cosmos, matter the primary substrate for generation and destruction, while (the) idea is an incorporeal substance in the conceptions and the perceptions of the god. (P₁₁,S₂₁,Tviii)

§21 But Aristotle, the son of Nicomachus, from Stagira (says that the) principles are *entelecheia* or form, matter, privation, and the elements are four, but there is (also) a fifth which is an ethereal and unchangeable body. The elements of generated things are, in terms of their qualities, hot, cold, wet, dry, while in terms of their essential natures, in which and concerning which these qualities exist, they are the four (sc. above-mentioned). (P₁₂,S₂₂,Tix)

§22 Xenocrates (says that) the universe is constituted from the One and the ever-flowing [or: 'negating unity'], with (the term) ever-flowing hinting at matter on account of its multiplicity. (S₄,Tx)

§23 Zeno, the son of Mnaseas, from Citium (says that the) principles are the god and matter, of which the former is the cause of action, the latter of passivity, while (the) elements are four (in number). (P₁₃,S₁₆,Txi)

§24 Strato says (the) elements are <(the) hot> and (the) cold. (S₁₁)

1.4 How the Cosmos Was Constituted (P)

§1 The cosmos therefore was constituted, configured with a curved shape, in the following manner. Since the indivisible bodies have a non-providential and random movement and are continually and at great speed moving towards the same place, many bodies manifesting a diversity of both shapes and sizes were for this reason collected together. As these bodies gathered together in the same place, those that were larger and heaviest settled down completely. But those that were small and round and smooth and mobile were squeezed out as the bodies collided and were carried upwards to the higher region. As then the force of the shock that had lifted them upwards lessened, the shock no longer bore them towards the higher region, but they were prevented from moving downwards and were pushed towards the places that were able to receive them. These places were on the periphery and it was against them that the mass of bodies were bent around. Entangling with each other in accordance with this bending, they gave rise to the heaven. The indivisibles that had the same nature were diverse, as has been said, and on being pushed out towards the higher region they produced the nature of the heav-

only bodies. But the mass of bodies that rose up in exhalations struck the air and compressed it. This then through its motion turned into wind and, taking up the heavenly bodies it led them along in its course, thereby preserving their present revolution on high. Then from the bodies that sunk downwards the earth arose, while from those that rose upwards the heaven, fire and air were formed. Since a considerable amount of matter was still contained within the earth and it was compacted by the pounding of the winds and the fiery rays (emanating) from the stars, the entire configuration of this matter with its small particles was compressed and produced the nature that is moist. Being in a fluid state, this matter travelled down to the places that were hollow and able to contain and hold it, or the water, deposited on its own, hollowed out the areas beneath it. (P₁)

§2 In this manner the most important parts of the cosmos were produced. (P₂)

1.5 Whether the All Is Unique (P,S)

§1 The (philosophers) from the Stoa declared the cosmos to be unique, which, they said, is also (to be identified with) the All that is corporeal. (P₁,S₂)

§2 Empedocles (says that) the cosmos is unique; (he says), however, that the cosmos is not all (that is material), but a small part of this 'All', the remainder being unworked matter. (P₂,S₁)

§3 Plato bases his belief that the cosmos and the All are unique on three considerations: (1) from the fact that it would not be complete, if it did not contain all things (within itself); (2) from the fact that it would not be similar to the model, if it were not alone in its sort; (3) from the fact that it would not be indestructible, if there were anything exterior to it. But against Plato it must be stated (1) that the cosmos is not complete, and it need not be so even if it did contain all things; after all, the human being is complete (i.e. full-grown), but he does not contain all things. There are moreover many models, as in the case of statues and buildings and paintings. (2) How could he say 'there is nothing outside it', for (if that were the case) it could not be whirling around? (3) Moreover, it is not indestructible and cannot be so, since it has come into being. (P₃,S₄)

§4 Metrodorus, the teacher of Epicurus, says that it is (equally) absurd that a single stalk should have sprung up on a large plain and that a single cosmos should have done the same in the Infinite. That the kosmoi are infinite in their multiplicity is clear from the fact that the causes are infinite in number. For if the cosmos is limited, while all the causes from which the cosmos originated are infinitely many, then necessarily (the kosmoi) are infinitely many. After all,

where the causes are without limit, there the products [or: effects] are (infinite in number or without limit) also. (These) causes are either the atoms or the elements. (P4,S3)

1.6 From Where Did Human Beings Obtain a Conception of Gods (P)

§1 The Stoics define the substance of the divine as follows: it is an intelligent and fiery breath, which does not have a (specific) form, but changes to whatever things it wishes and assimilates itself to all things.

[5] They obtained a conception of this (divine being) in the first place by taking as their starting-point the beauty of what becomes visible (in it). For nothing that is beautiful originates at random and by chance, but with the aid of a skill that works as a craftsman. The heaven is beautiful. This is evident from its shape, its colour, its size, and the variety of the heavenly bodies that adorn it. For heaven is spherical, (a shape) which takes the first place among all shapes, for it alone corresponds to its own parts, since it is round and so are its parts. (This is the reason according to Plato that the most sacred component (sc. of the human being), the intellect, has been established in the head.) Its (sc. the heaven's) colour is beautiful too, for it has been coloured with blueness, which is darker than purple but still has the quality of brightness, and it is for this reason that with its intense colour it traverses so great a body of air and is visible at such large distances. It is also beautiful because of its size, for with all entities of a same species what surpasses them is beautiful, as with a living being or a plant. The following visible signs also contribute to bringing the beauty of the sky to perfection, for the ecliptic circle in heaven is decorated with a variety of graphic pictures [i.e. constellations]:

In it there is Cancer, followed by Leo, and after it
Virgo, and then the Claws and (after it) Scorpio himself,
and Sagittarius and Capricorn, and after Capricorn
Aquarius, and following him the two starry Pisces,
and after them Aries, and next Taurus and Gemini.

Countless other features he has created corresponding to similar twistings of the cosmos. Hence Euripides too says:

and the star-faced brilliance of heaven,
a beautiful embroidery of time, (the work) of a wise builder.

[29] We also obtained a conception of God from the following: it is not the case that the sun and the moon and the remaining heavenly bodies, after pursuing their course under the earth, fail to rise again with the same colours, not varying in their sizes, in the same places, and at the same times.

[33] Hence those people who have transmitted reverence for the gods have done so by means of three kinds of exposition, firstly through that of natural philosophy, secondly through the mythical (kind), and thirdly through the kind that takes its evidence from the laws [or: customs]. Natural philosophy is taught by the philosophers, the mythical kind by the poets, while what is lawful [or: customary] is established each time by the particular city.

[38] The entire teaching (on the gods) is divided into seven kinds. The first is based on the visible signs and heavenly occurrences. They obtained a conception of God from the visible heavenly bodies, observing that these are the cause of a mighty harmony and have brought about the ordered state of day and night and winter and summer, risings and settings, as well as the births of living beings and plants produced by the earth. Hence it seemed to them that heaven had the role of father and earth that of mother. The former was father through the outpourings of rain that had the role of seeds, while the earth was mother by receiving these (seeds) and giving birth. When they saw that the heavenly bodies always followed their courses (*aei theontas*) and that the sun and moon were the cause of our ability to contemplate (*theôrein*), they called them 'gods' (*theous*). They divided the gods into a second and third category, namely that which harms and that which assists. Those who assist are Zeus, Hera, Hermes and Demeter, while those who cause harm are the Avengers, the Erinyes and Ares, whom they regard as holy even though they are responsible for hardship and violence. The fourth and fifth kinds they applied to states of affairs and feelings, such as (for the former) Eros, Aphrodite and Desire, and for states of affairs Hope [*sic*], Justice and Good Order. As a sixth category were added the fictions of the poets. For example, Hesiod wanted to create gods as fathers of the beings that came into existence and so introduced the following as their begetters,

Coeus and Crius and Hyperion and Iapetus.

[57] For this reason the category is also called 'mythical'. The seventh and final kind (of gods) was the one which was especially honoured for the beneficent contributions to the public good, but was born in human form, such as Heracles, such as the Dioscuri and such as Dionysus. The reason that they said that these (gods) were of human form is that the divine is the most excellent of all beings and the human being the most beautiful of living beings, and,

adorned as he is with virtue especially through the formation of his intellect, also the most capable. Similarly they thought, therefore, that it was good (to attribute the greatest beauty) to those who excelled with the highest ability. (P1)

1.7 Who the Deity Is (P,S)

§1 Some of the philosophers, such as Diagoras of Melos and Theodore of Cyrene and Euhemerus of Tegea say that the gods do not exist at all. Euhemerus is also hinted at by Callimachus of Cyrene when he writes in his *Iambi*:

Come hither to the temple in front of the wall,
where the old man who fabricated the ancient bronze Zan
scribbles his unrighteous books like the charlatan he is.

These (books) are the ones on the subject that the gods do not exist. Euripides too, the tragic poet, though he did not wish to disclose this view for fear of the Areopagus, did make his position known in the following way. He introduced the character of Sisyphus as defender of this opinion, and so pleaded his cause by means of this man's judgment:

For there was a time, he says, when human life was disordered,
beast-like, and at the mercy of violence.

Then, he says, the lawlessness was dissolved through the introduction of laws. Since, however, the law was able to curb overt acts of injustice but many people continued to practise them in secret, at that point a wise man ordained that it was necessary 'to blind the truth with a false account' and persuade mankind

how there is a deity flourishing with imperishable life,
who hears and sees and takes good note of these (deeds).

Let such poetic nonsense be done away with, he says, together with the words of Callimachus:

if you recognize God,
be aware that for the deity it is possible to achieve everything.

For not even God can do everything. If the divinity indeed exists, let him then make snow black, fire cold, what is sedentary upright and vice versa.

[27] And when the grandiloquent Plato says that 'God formed the cosmos by looking at himself as model', he reeks of archaic moonstruck nonsense, to use the language of the ancient comic poets. For how did he create while looking to himself? And how can he (Plato) say the deity is spherical in shape, humbler in status than man? Anaxagoras says that at the beginning the bodies were at rest, but the Intellect of God gave them an orderly arrangement, and brought about the births of all things. Plato on the other hand supposed that the primary bodies were not at rest, but moving in a disorderly fashion. Therefore, he says, the deity, ordaining that order is better than disorder, gave them an orderly arrangement. Both thinkers thus have this mistake in common, namely that they made the deity pay attention to human affairs or even have him create the cosmos for this reason. After all, the blessed and indestructible living being, who is replete with all good things and not receptive of any evil, being wholly focused on the maintenance of his felicity and indestructibility, is not involved with human concerns, for otherwise he would be wretched in the manner of a workman and a builder, burdened with care and fretting about the construction of the cosmos.

[47] Another argument is that the god of whom they speak either did not exist in the previous age when the bodies were either at rest or in disorderly movement, or he was asleep or he was awake, or neither of these. The first option is unacceptable, for the deity is eternal. The second too is unacceptable. If God were sleeping from eternity, he would be dead, since eternal sleep is (tantamount to) death. But God is also not receptive of sleep, for God's immortality and a state close to death are separated by a great distance. If, however, God was awake, either there was a deficiency in his felicity or he was wholly fulfilled in his blessedness. But neither according to the first option is he blessed, because a deficiency in felicity is incompatible with blessedness, nor (is he blessed) according to the second option, because then, though in no way deficient in happiness, he would embark on deeds that were to no purpose.

[52] How does it happen then, if the deity indeed does exist and human affairs are administered through his forethought, that what is fraudulent flourishes and what is noble suffers the opposite fate?

Agamemnon, for example, was
both an excellent king and a mighty warrior,

but he was overpowered and murdered by an adulterer and an adulteress. And this man's relative, Heracles, who had cleaned up many of the evils that infest human life, fell prey to the sorcery of Deïanira and was murdered. (P1,T:bits from P)

§2 Thales (says that) the deity is the Intellect of the cosmos, and that the universe is ensouled and at the same time full of demons. In addition the divine power also pervades the elementary moist (substance) and causes it to move. (P₂,S₁)

§3 Anaximander (says that) the unlimited [or: infinitely many] heavens are gods. (P₃,S₂)

§4 Anaximenes (says that the deity is) the air. Statements such as these [sc. as those of Anaximenes] should be understood as referring to the powers that pervade through all parts of the elements or the bodies. (S₃)

§5 Archelaus (says that) the deity is air and Intellect, but the Intellect does not make the cosmos. (S₄)

§6 Anaxagoras (says that) the deity is an Intellect that makes the cosmos. (S₅)

§7 Democritus (says that) the deity is an Intellect that resides in fire with spherical form. (P₄,S₆)

§8 Diogenes and Cleanthes and Oenopides (say that the deity is) the soul of the cosmos. (S₇)

§9 Pythagoras (says that) of the principles, the Monad is the deity and the Good, which is the nature of the One and identical to the Intellect, but the Undetermined Dyad is a daemon and what is evil, around which the plurality of matter resides, and is also the visible cosmos. (P₅,S₈)

§10 Posidonius (says that the deity is) an intelligent and fiery Spirit, which does not have (a single) form, but changes into what it wishes and assimilates itself to all things. (S₉)

§11 Speusippus (says that the deity is) the Intellect, which is not identical to either the One or the Good, but has a nature of its own. (S₁₀)

§12 Critolaus and Diodorus of Tyre (say that the deity is) an Intellect (derived) from impassive ether. (S₁₁)

§13 Heraclitus (says that the deity is) the (eternally) recurrent everlasting fire, while fate is reason (*logos*), producer of the things that exist by turning in contrary directions. (S₁₂)

§14 Zeno the Stoic (says that the deity is the) fiery Intellect of the cosmos. (S₁₃)

§15 Mnesarchus (says that the deity is) the cosmos, which derives its primary existence from spirit. (S₁₄)

§16 Boethus (says that) the ether is God. (S₁₅)

§17 Parmenides (says that the deity is) the unmoved and limited spherical (being). (S₁₆)

§18 Melissus and Zeno (say that the deity is) the One and All and solely everlasting and unlimited. (S₁₇)

§19 ⟨Empedocles (says that) the elements and the principles and) the One (are gods), and that the One is necessity, but that its matter is the four elements, while its forms are Strife and Love. He also calls the elements gods, and the mixture of these the ⟨Sphere⟩, and (says that) the ⟨cosmos⟩ will be dissolved into this uniform entity. He also thinks that the souls are divine, and that those ‘pure ones’ who share in them ‘purely’ are divine as well. (S18)

§20 Polemon (says that) the cosmos is God. (S19)

§21 Xenocrates the son of Agathenor from Chalcedon (says that) the Monad and the Dyad are gods, the former as male having the rank of Father and ruling in heaven, which he also calls Zan and odd and Intellect, who for him is the first god, the latter as female having the role of Mother of the gods, presiding over the region under the heaven, who for him is the soul of the universe [?]. He says too that the heaven is a god and that the fiery stars are Olympian gods, as well as other sublunary demons, which are invisible. It is also his view that there are divine powers, and that these penetrate the material elements. Of these the one which passes through the invisible (*aeides*) air he calls ‘Hades’, the one which passes through the moist (substance) ‘Poseidon’, and the one that passes through the earth ‘plant-sowing Demeter’. These doctrines he bequeathed to the Stoics, but the views (described) earlier he took from Plato and reformulated. (S20)

§22 Socrates and Plato (say that the deity is) the One, the single-natured, the monadic, the true Being, the Good. All such names immediately refer to the Intellect. The deity, then, is an Intellect, (that is,) a separate Form; by ‘separate’ let that be understood which is free of all matter, not entwined with any of the bodily entities, and also not sharing affection with anything in nature that is passible [or: subject to affection]. Of this (God) as Father and Maker the other intelligible divine beings (the so-called intelligible cosmos) are the descendants, and they are the models for the visible cosmos. In addition to these there are ethereal powers (these are incorporeal *logoi*), and powers that inhere both in air and in water, as well as the sense-perceptible descendants of the first god, sun, moon, stars, earth and the all-embracing heaven. (P6,S21)

§23 Aristotle (says that) the highest god is a separate form, mounted on the sphere of the universe, which is the ethereal body, also called by him the fifth (element). This body is divided into spheres that are contiguous in reality but separated by reason. Each of these spheres he regards as a living being composed of body and soul. Of these the body is ethereal and moves in a circular fashion, whereas the soul is unmoved reason and cause of movement in actuality. (P7,S22)

§24 The Stoics declare that God is intelligent, a designing fire which proceeds methodically to the generation of the cosmos, encompassing all the seminal *logoi* according to which each thing comes to be in accordance with fate. It

is also a Spirit which pervades the whole cosmos, taking on the names that correspond to the alterations of the matter through which it has passed. In addition (they regard as) gods the cosmos, the heavenly beings, and the earth, and the Intellect in the aether at the summit of everything is a god, too. (P8,S23)

§25 Epicurus (says that) the gods are human in form, and are all observable by reason (only) because of the fine particles of which the nature of their images consists. The same (philosopher says there are) four other classes of natures that are indestructible: the indivisibles, the void, the infinite, and the similarities; these (natures) are called *homoiomereiai* ('having similar parts') and elements. (P9,S24)

1.8 On Demons and Heroes (P)

§1 Appended to the account 'On the gods' we must record the one 'On demons and heroes'. (P1)

§2 Thales Pythagoras Plato the Stoics (say that) demons are psychic beings; (they also say that) the heroes too are souls that have been separated from their bodies; and they (sc. the demons) are good if (the souls are) good, but wicked if (the souls are) wicked. (P2)

§3 But Epicurus admits none of these (as demonic). (P3)

1.9 On Matter (P,S)

§1 Matter is the substrate for all generation and destruction and the other (kinds of) changes. (P1,S1)

§2 The successors of Thales and Pythagoras, I mean those [sc. philosophers] going down to the Stoics together with Heraclitus, (say that) matter is wholly and completely changeable and alterable and mutable and fluid. (P2,S2,T1)

§3 The successors of Democritus (say that) the first things are impassible, i.e. the atom and the incorporeal void. (P3,S3,T2)

§4 Plato (says that) matter is body-like, without figure, 'without form', fully shapeless, without quality as far as its own nature is concerned, but by receiving the forms it became like a 'nurse' and a 'mould' and a 'mother'. (P4,S4,T3)

§5 But Aristotle (says that it is) corporeal. (P4,T4)

§6 But those who state that matter is water or fire or air or earth no longer regard it as without figure, but as body, (P5,S5)

§7 whereas those who say it is the partless (particles) and the atoms (say that it is) without figure. (P6,S6)

§8 (But) the Stoics declare matter to be body. (S7,T5)

1.10 On (the) Idea (P,S)

§1 The idea is an incorporeal substance. It is itself the cause that makes things (to be) such as they are and the model of the existence of the natural sense-perceptibles. It exists by itself, but makes the formless materials into images (of itself) and becomes a cause of their arrangement, occupying a father's position towards the sense-perceptibles. (P₁,S₁)

§2 Socrates and Plato understand the ideas as substances separate from matter, existing in the conceptions and perceptions of God, that is to say, the intellect. (P₂)

§3 Pythagoras placed the so-called forms and the ideas in the numbers and their harmonies and what are named the geometricals, (regarding them as) inseparable from the bodies. (S₂)

§4 Aristotle preserved the forms and ideas, but as not in fact separated from matter, (thereby) placing himself outside (the view that they) are (put into matter) by God. (P₃)

§5 The Stoics who were the successors of Zeno (say) that the ideas are our own conceptions. (P₄)

1.11 On Causes (P,S)

§1 A cause is (that) through which the effect (is completed) or through which something occurs; for a descriptive definition suffices. (P₁,S₁)

§2 Plato (understands) the cause in three ways, for he says 'by which', 'out of which', 'towards which'. But more properly (he regards) the 'by which' (as the cause). This is the agent, i.e. Intellect. (P₂,S₂)

§3 Pythagoras Aristotle (say that) that there are first causes which are incorporeal, and there are causes by participation in or as property of the corporeal subsistence, with the result that the cosmos is body. (P₃,S₃)

§4 The Peripatetics (say that) of the causes some are sensible and others intelligible. (S₆)

§5 The Stoics (say that) all the causes are corporeal, for they are *pneumata* [i.e. currents of warm air]. (P₄)

§6 Thales and his successors declared that the first cause is unmoved/unchanging. (S₄)

§7 The Stoics defined the first cause as movable/changing. (S₅)

1.12 On Bodies (P,S)

§1 A body is that which extends in three directions, width, depth and length. Or it is a mass that of itself is resistant. Or it is that which occupies a place. (P₁,S₁)

§2 Plato (says that body) is something neither heavy nor light by nature when it in fact exists in the place proper to it. But when it has come to be in an alien place, then it obtains inclination, and from this inclination there is a turning either to heaviness or lightness. (P₂,S₂)

§3 Aristotle (says that) earth is the heaviest (body) in absolute terms, and fire is the lightest, while air and water differ (in weight) according to circumstances. (He also says that) fire by nature never moves in a circular fashion, but (that) only the fifth body (does this). (P₃,S₃)

§4 The Stoics (say that) two of the four elements are light, fire and air, and that two are heavy, water and earth. For light by nature is that which inclines away from the own centre (sc. of the cosmos), whereas heavy is that which moves to (the) centre. In addition the light (sc. of the sun etc.) on earth moves in a straight line, whereas the etherial (variety) moves in a circle. (P₄,S₄)

§5 Epicurus (says that) the bodies are inconceivably many [or: inconceivable (in number)], and that the first (bodies), which are simple, as well as all the bodies that are composites of these, possess heaviness. (He also says that) the atoms at one time move perpendicularly, at another time with a swerve. But (the bodies that) move upwards do so through impact or rebounding. (P₅,S₅)

§6 Democritus says that the first bodies (these are the solid bodies) do not have heaviness, but move by reciprocal impact in the infinite (space). (He also says that) it is possible that an atom of cosmic proportions exists [or: (that) it is (absurd) that one of cosmic proportions exists]. (S₆)

§7 Strato (says that) natural heaviness attaches to bodies, and that the lighter ones float on the surface of the heavier ones, like stones (in fruit) that are squeezed out. (S₇)

1.13 On Minimal Bodies (P,S)

§1 Empedocles (says that) prior to the four elements (there are) minimal fragments, like elements before elements, (which elements are) *homoiomere* (i.e. things with similar parts), i.e. 'round'. (P₁,S₁)

§2 Heraclitus, as some believe, introduces little filings prior to the one (sc. element). (P₂,S₂)

§3 Xenocrates and Diodorus defined the minima as partless (entities). (S₃)

§4 (But) Heraclides (defined them as) fragments. (S₄)

1.14 On Shapes (P,S)

§1 A shape is a surface and an outline and a limit of a body. (P₁,S₁)

§2 Pythagoras and his followers (say that) the shapes of the four elements are spherical, and that only the very highest (element,) fire, is cone-like. (P₂,S₂)

§3 Anaxagoras (says that) the *homoiomere* ('things with like parts') are of many shapes. (S₃)

§4 The successors of Leucippus (say that) the atoms are of many shapes. (S₄)

§5 Cleanthes alone of the Stoics declared that the (element) fire is cone-like. (S₅)

1.15 On Colours (P,S)

§1 Colour is the quality of a body that is primarily visible. (P₁,S₁)

§2 The Pythagoreans called colour the surface of the body. (P₂,S_{2a})

§3 Empedocles declared colour to be what is fitting for the passages of sight. And there are four, equal in number to the elements: white, black, red, ochre [i.e. yellow]. (P₃,S₃)

§4 Plato (says that colour is) a flame (emanating) from the bodies, which has particles commensurate with (the organ of) sight. (P₄,S₄)

§5 Aristarchus of Samos the astronomer, disciple of Strato, (says that) colour is light falling on what it falls upon. (S₅)

§6 Zeno the Stoic (says that) the colours are first configurations of matter. (P₅,S₆)

§7 The successors of Pythagoras (say that) the kinds of the colours are white and black, red, ochre [i.e. yellow]. The differences between the colours (come) from the qualitative blendings of the elements, and those of the living beings from the variations of the foodstuffs and the airs (they breathe). (P₆,S_{2b})

§8 Democritus (says that) no colour exists by nature, for the elements are without quality, being the solids [i.e., atoms] and the void. But the compounds formed from these are coloured by 'inter-contact', by 'rhythm' and by 'turning', of which the first results in order, the next shape and the last position. For it is on the basis of these that the impressions (on the senses arise). Of these col-

ours that relate to the impression (on the senses) there are four differentiations: white, black, red, ochre [i.e. yellow]. (S7)

§9 Epicurus and Aristarchus (say that) the bodies in the dark do not have colour. (S8)

§10 Aristotle (says that colour is) a limit in bounded transparency, that the transparent is filtered matter that is pure and unmixed, and that colour exists as that which moves this (matter). In the dark bodies have colour potentially, but never actually. There is, however, a great difference between not having (colour) and (colour) not being seen. (S9)

§11 Other (thinkers say that) the elements are naturally coloured, (S10)

§12 others (say) that the primary *homoiomere* ('things with like parts') participate in quality, (S11)

§13 and yet others (say) that all the atoms taken together are without colour, and they indicate that the visible qualities arise from (entities) without quality that are observable by reason. (S12)

1.16 On Cutting of Bodies (P,S)

§1 The successors of Thales and Pythagoras (say that) the bodies are passible and divisible to infinity. And all (of the following) are continuous: line, surface, solid [i.e. three-dimensional] body, place, time. (P1,S3)

§2 Those thinkers who introduce the atoms (say that) the cutting stops at the partless (entities) and that there is no cutting to infinity. (P2,S2)

§3 Aristotle (says that the cutting of bodies occurs) potentially to infinity, but in actuality never. (P3,S1)

1.17 On Mixing and Blending (P,S)

§1 Thales and those following him (say that) the mixings of the elements occur through alteration. (P1,S1)

§2 Anaxagoras and Democritus and their successors (say that they occur) through juxtaposition. (P2,S2)

§3 Empedocles and Xenocrates combine the elements out of smaller masses, which are least in size and as it were elements of elements. (P3,S3)

§4 Plato (says that) the three bodies—for he does not wish them to be or be called elements in the proper sense—are convertible to each other, namely fire, air and water, but that earth cannot be changed to any of these. (P4,S4)

1.18 On Void (P,S)

§1 All physicists from Thales up to and including Plato rejected the void in the real sense of the word. (P₁,S₁)

§2 Empedocles: 'and of the All nothing is empty or superfluous'. (P₂,S₂,T₂)

§3 Leucippus Democritus Demetrius Metrodorus Epicurus (say that) the atoms are infinite in number, and the void infinite in size. (P₃,S₃,T₁)

§4 Strato (says that) there is no void outside the cosmos, but that it is possible for it to occur inside. (S₄,T₄)

§5 Zeno and his successors (say that) inside the cosmos there is no void at all, but outside it (sc. the cosmos) it is infinite. (P₄,S₆,T₃)

§6 Aristotle (says that) that the void outside the cosmos is exactly large enough for the heavens to breathe into it; for inside there is a fiery place. (P₅, cf.S₅)

1.19 On Place (P,S)

§1 Plato (says place is) what partakes of the forms, like a sort of 'wet-nurse' and 'recipient'. (By this) he has metaphorically denoted matter. (P₁,S₂)

§2 Aristotle (says it is) the outermost of what surrounds that connects with what is surrounded. (P₂)

§3 Strato (says it is) the interval between what surrounds and what is surrounded. (S₁)

1.20 On Space (P,S)

§1 Zeno and his successors (say) that void, place (and) space differ; thus void is vacancy of body, place what is occupied by a body, space what is partially occupied, as in the case of a jar of wine. (P₁,S₁)

§2 Epicurus (says that) all these terms are to be used interchangeably: void, place, space. (S₂)

1.21 On Time (P,S)

§1 Pythagoras (says that time is) the sphere of that which encompasses. (P₁,S₁)

§2 Plato (says that time is) a moving image of eternity, or the dimension of the motion of the cosmos. (P₂,S₃)

§2 α Aristotle (says that time is) the number of the motion of the heavenly sphere. (P Q_3)

§3 Eratosthenes (says that time is) the course of the sun. (P $_3$,S $_2$)

1.22 On the Substance of Time (P,S)

§1 Plato (says that the) substance of time is the motion of the heaven. (P $_1$,S $_9$)

§2 The Stoics (say that it is) motion itself. (P $_2$,S $_1$)

§3 Xenocrates (says it is) a measure of what is generated, and (also) everlasting motion. (S $_3$)

§4 Hestiaeus of Perinthus, the natural philosopher, (says it is the) motion of the heavenly bodies in relation to each other. (S $_4$)

§5 Strato (says it is) the quantitative in motion and rest. (S $_5$)

§6 Epicurus (says it is) a concomitant, that is an accompaniment of motions [or: changes]. (S $_6$)

§7 Antiphon and Critolaus (say that) time is a concept or measure, and not something that exists on its own. (S $_7$)

§8 And the majority (of philosophers say that) time is ungenerated, (P $_3$,S $_2$)

§9 But Plato (says that it is) generated in thought. (P $_4$,S $_8$)

1.23 On Motion (P,S)

§1 Pythagoras Plato: motion is a difference or alteration in matter *qua* matter. This is the shared definition of every (form of) motion. (P $_1$,S $_1$)

§2 Aristotle: (motion is) entelechy of the movable. (P $_2$,S $_{10}$)

§3 Democritus: (there is) one kind of motion, that which (occurs) through vibration. (P $_3$,S $_2$)

§4 Epicurus (says there are) two kinds of motion, that which (occurs) perpendicularly and that which (occurs) through deviation. (P $_4$,S $_3$)

[a lemma on three kinds of motion seems to have fallen out]

§5 But there are some who introduce a fourth kind, that which (occurs) substantially, i.e. that which (occurs) in terms of coming to be. (S $_4$)

§6 Yet others add intellectual (motion) as well, so in fact they have advanced up to the (number) five. (S $_5$)

§7 Diodorus Cronus (says that) things have moved to some extent, but that nothing is moving (sc. in actuality). (S $_6$)

§8 Heraclitus removed rest and standing still from the whole of things, for this belongs to corpses; to everlasting things he assigned everlasting motion and to perishable things (he assigned) perishable (motion). (P $_6$,S $_7$)

§9 Herophilus (says that there is) motion that is observable by reason and (there is) motion that is sense-perceptible. (P5,S8)

§10 (But) Asclepiades declared that all motion is sense-perceptible. (S9)

1.24 On Coming To Be and Passing Away (P,S)

§1 Parmenides Melissus Zeno abolished coming to be and passing away because they held that the All is unmoved. (P1,S1)

§2 Empedocles Anaxagoras Democritus Epicurus and all those who make a cosmos through aggregation of bodies composed of fine particles introduce combinations and separations, but not comings to be and perishings in the true sense. For these do not come to be according to quality from alteration, but according to quantity from aggregation. (P2,S2)

§3 Pythagoras and all those who assume that matter is passive (say that) coming to be and passing away occur in the true sense. For through (qualitative) alteration of the elements and (their) turning and dissolution there takes place coming to be and passing away, juxtaposition and mixing, blending and fusion. (P3,S3)

1.25 On Necessity (P,S)

§1 Thales: necessity is the strongest (of all things), for it rules over the universe. (P1,S1)

§2 Pythagoras said that necessity embraces the cosmos. (P2,S2,T2)

§3 Parmenides and Democritus (say that) all things (happen) in accordance with necessity and that it is the same as fate and justice and providence and that which makes the cosmos. (P3,S3,T1,3)

§4 Leucippus (says that) all things (happen) in accordance with necessity and that it is the same as fate. For he states in the *On Intellect*, 'nothing happens at random, but all things (happen) both for a reason and by necessity.' (S4)

§5 Plato ascribes some things to providence, other things to necessity. (P4,S5b)

1.26 On the Substance of Necessity (P)

§1 Empedocles (says that) the substance of necessity (is) a cause that is able to make use of the principles and the elements. (P1, S2)

§2 Democritus (says that the substance of necessity is) the resistance and motion and blow of matter. (P₂)

§3 Plato (says that the substance of necessity is) sometimes matter and sometimes the disposition of the maker towards matter. (P₃,S₁)

1.27 On Fate (P,S)

§1 Heraclitus (says that) all things (occur) in accordance with fate, and that it (fate) and necessity are the same. Indeed he writes, 'for it (sc. necessity) is fate in every respect'. (P₁,S_{2b},T₁)

§2 Plato recognises (the role of) fate in relation to human souls and lives, but along with it he also introduces the cause that relates to us. (P₂)

§3 The Stoics, agreeing with Plato, say that necessity is an invincible and compelling cause, while fate is an ordered nexus of causes. In this nexus there is also the element that relates to us, so that some things are fated (for us) and others not fated. (P₃)

§4 Chrysippus (says that) what has been necessitated does not differ from is fated, and that is an everlasting, continuous and ordered movement in accordance with an articulated nexus of its parts. (S₁,T₂)

§5 Zeno the Stoic (says) in his *On Nature* (that fate is) a force that moves matter in the same respect and in the same way. It makes no difference (he adds) to call it providence and nature. (S₅,T₃)

§6 Antipater the Stoic declared that fate is a god. (S₆)

1.28 On the Substance of Fate (P)

§1 Heraclitus (says that) the substance of fate is the *logos* that passes through the being of the All. It is the etherial body, seed of the coming-to-be of the All and measure of (its) ordered revolution. (P₁,S_{2a})

§2 Plato (says that it is) everlasting *logos* and everlasting law of the nature of the All. (P₂,S₃)

§3 Chrysippus (says that it is) a pneumatic force that is administrative for the ordering of the All. And again in *On Definitions*: 'fate is the *logos* of the cosmos, or *logos* of what is administered by providence in the cosmos, or *logos* in accordance with which what has happened happened, what is happening happens, and what will happen will happen'. (P₃,S₇,T₄)

§4 The other Stoics (say that it is) a concatenation of causes, that is an inviolable ordering and linking together. (P₄,T₅)

§5 Posidonius (says that it is) third in line from Zeus; for first (he says there is) is Zeus, second (there is nature), third (there is) fate. (P5,S4)

1.29 On Chance (P,S)

§1 Plato (says that chance is) an accidental cause in the realm of the voluntary, as well as an adventitious consequence and fortuitous event, and it is a substituted attitude of the voluntary with regard to the envisaged purpose. (P1,S2,T1)

§2 Aristotle (says that chance is) an accidental cause that is unclear and unstable in the realm of what occurs according to an impulse towards some end.—There is a difference, (he says) between chance and the spontaneous. For what occurs by chance and (also) spontaneously are (both) certainly in the realm of action, but what is spontaneous (only) does not occur by chance, for it is in the realm outside action. In addition chance belongs to rational beings (only), whereas the spontaneous occurs in the case of rational and irrational living beings and unsouled bodies. Also chance occurs through the exercise of will, the spontaneous without it; and the former occurs when there is somebody (who has decided), but the latter (occurs) without the intervention of reason, without anything having been decided externally. (P2,S3–S1,T2)

§3 Epicurus (says that chance is) a cause that is unstable in relation to persons, times and places, (and that all things occur) by necessity, through choice, and by chance. (P3,S4–S5)

§4 Anaxagoras and Democritus and the Stoics (says that chance is) a cause that is unclear to human reasoning. For (they say) there are things (that occur) by necessity, (that occur) by fate, (that occur) by chance and (that occur) spontaneously. (P4,S6,T3)

1.30 On Nature (P,cf.S)

§1 Empedocles (says that) there is no such thing as nature (*physis*), but (only) mixing and separation of the elements. For in the first book of the *Physics* [i.e. physical poem] he writes as follows:

But I shall tell you something more: there is no nature of all
that is mortal, nor is there an end consisting of wretched death,
but only mixing and separation of what has been mixed,
and 'nature' is what it is called by human beings. (P1)

§2 In the same way Anaxagoras (says that) nature is a combination and separation, which is coming-to-be and passing away. (P2)

Book 2 Cosmology

AËTIUS
ON THE VIEWS (OF THE PHILOSOPHERS)

BOOK 2
in which the following headings (are found):

[Proem]

1. On the cosmos
2. On the shape of the cosmos
3. Whether the cosmos is ensouled and administered by providence
4. Whether the cosmos is indestructible
5. Where the cosmos obtains its nourishment from
- 5a. Where the cosmos has its regent part)
6. From what kind of first element the god began to make the cosmos
7. On the order of the cosmos
8. What the cause of the cosmos having been tilted is
9. On what is outside the cosmos, whether there is a void
10. What the right (parts) of the cosmos are and what the left
11. On the heaven, what its substance is
12. On the division of heaven, into how many circles it is divided
13. What the substance of the heavenly bodies is, (both) planets and fixed stars
14. On the shapes of the stars
15. On the ordering of the heavenly bodies
16. On the conveyance and movement of the heavenly bodies
17. From where the heavenly bodies obtain their illumination
18. On the stars called the Dioscuri
19. On signs of the seasons produced by the heavenly bodies
20. On the substance of the sun
21. On the size of the sun
22. On the shape of the sun
23. On the turnings of the sun
24. On the eclipse of the sun
25. On the substance of the moon
26. On the size of the moon
27. On the shape of the moon
28. On the illuminations of the moon

29. On the eclipse of the moon
30. On its appearance and why it appears (to be) earthy
31. On the distances of the moon
32. On the year, how great the time of (the revolution of) each of the planets is, and what the Great year is

[Proem]

Having thus completed my account of the principles and elements and what is closely associated with them, I shall turn to the account concerned with the products, starting with the most comprehensive of all things. (P)

2.1 On the Cosmos (P,S)

§1 Pythagoras was the first to call the container of all things 'cosmos' on the basis of the order present in it. (P₁,S₅)

§2 Thales Pythagoras Empedocles Ecphantus Parmenides Melissus Heraclitus Anaxagoras Plato Aristotle Zeno (say that) the cosmos is unique. (P₂,S₆,T₁)

§3 Anaximander Anaximenes Archelaus Xenophanes Diogenes Leucippus Democritus Epicurus and his teacher Metrodorus (say that there are) infinite kosmoi in the infinite space throughout the entire surrounding area. (P₃,S₇,T₂)

§4 Of those that declare there to be infinite kosmoi, Anaximander (says that) they are at an equal distance from each other, (S₈)

§5 whereas Epicurus (says that) the distance between the kosmoi is unequal. (S₉)

§6 Empedocles (says that) the revolution of the sun is the perimeter of the cosmos' limit. (P₄,S₁)

§7 Seleucus from the Red Sea and Heraclides from Pontus (say that) the cosmos is infinite. (P₅,S₂)

§8 Diogenes and Melissus (say that) the universe is infinite, but the cosmos is limited. (P₆,S₃)

§9 The Stoics (say that) the universe and the whole differ, for the universe is the cosmos together with the infinite void, whereas the whole is the cosmos apart from the void; as a result the whole and the cosmos amount to the same. (P₇,S₄)

* On the translation of multiple name-labels see the User's guide to the translation.

2.2 On the Shape of the Cosmos (P,cf.S)

- §1 The Stoics (say that) the cosmos is like a ball [i.e. spherical], (P₁,S₁,T₁)
 §2 but others (say that it is) like a cone, (P₂,cf.T₂)
 §3 while yet others (say that it is) like an egg [i.e. ovoid]. (P₃,cf.T₂)
 §4 Leucippus and Democritus (say that) the cosmos is like a ball. (S₂,T₂)
 §5 Epicurus, however, (says that) it is possible that the kosmoi are like a ball, but that it is possible that they make use of other shapes as well. (P₄)

2.3 Whether the Cosmos Is Ensouled and Administered by Providence (P,S)

- §1 All other (philosophers say that) the cosmos is ensouled and administered by providence. (P₁,S₁,T₁)
 §2 But Leucippus and Democritus and Epicurus (say that) it is constituted out of atoms by an unreasoning natural force. (P₂,S₂,T₂)
 §3 Ecphantus (says that) the cosmos is constituted out of atoms, but is (nevertheless) administered by providence. (S₃)
 §4 Aristotle (says that the cosmos is) neither ensouled through and through, nor is it endowed with sense-perception or rational or intellectual or administered by providence. For the heavenly realm shares in all these (characteristics), as it contains ensouled spheres which are endowed with life. The earthly realm, however, shares in none of them, but shares in its well-ordered state contingently, not primarily. (P₃,S₄)

2.4 Whether the Cosmos Is Indestructible (P)

- §1 Pythagoras Heraclitus (say that) the cosmos is generated in thought, but not in time. (S₁₀–11,T₁)
 §2 The Stoics (say that) (the cosmos has come into being) through the agency of God. (P₁)
 §3 Epidicus (says that) the cosmos has come into being through the agency of nature. (S₁₂)
 §4 Archelaus (says that) the cosmos was constituted through the agency of warmth and ensoulment. (S₁₃)
 §5 Xenophanes Parmenides Melissus (say that) the cosmos is ungenerated and everlasting and indestructible. (P₃,S₃,T₂,4)
 §6 But there are those who say that its ordering is eternal, yet (also) say that there are periodic times in accordance with which all things come into being in

exactly the same way and preserve the same disposition and ordering of the cosmos. (S₄)

§7 Anaximander Anaximenes Anaxagoras Archelaus Diogenes Leucippus (say that) the cosmos is destructible. (S₅,T₃)

§8 The Stoics too (say that) the cosmos is destructible, but (this occurs) in the conflagration. (S₆,cf.P₁)

§9 Plato (says that) the cosmos is destructible as far as its nature is concerned, for it is sense-perceptible—since it is also corporeal—, but that through the providence and supervision of God it will certainly not be destroyed. (P₁,S₁)

§10 Aristotle (says that) the part of the cosmos below the moon is passible, in which also the things on earth perish. (P₄,S₂)

§11 Empedocles (says that) the cosmos is destroyed in accordance with the successive dominance of Strife and Love. (S₇)

§12 Democritus (says that) the cosmos is destroyed when the larger (one) overcomes the smaller one. (S₈)

§13 Epicurus (says that) the cosmos is destroyed in a multitude of ways, for example as an animal and as a plant and in numerous other ways. (P₂,S₉)

2.5 Where the Cosmos Obtains Its Nourishment from (P,S)

§1 Aristotle: if the cosmos obtains nourishment, it will also be subject to destruction; but it is certainly not in need of any nourishment; for this reason it is everlasting as well. (P₁,S₂)

§2 Plato (says that) the cosmos itself provides nourishment for itself from that which perishes through transformation. (P₂)

§3 Philolaus (says that) there is a double (form of) destruction, in the one case from heavenly fire that has rushed (down), in the other case from moon-water that has been poured forth by the conversion of the air; and the exhalations of these are nourishment for the cosmos. (P₃,S_{1,3})

⟨2.5a Where the Cosmos Has Its Ruling Part⟩ (S)

§1 Plato (says) the ruling part of the cosmos in the heaven. (S₁)

§2 Cleanthes the Stoic (says it is) in the sun. (S₃)

§3 Archdemus (says it is) in the earth. (S₄)

§4 Philolaus (says it is) in the innermost fire, which the craftsman god first set under the sphere of the universe like a keel. (S₂)

2.6 From What Kind of First Element the God Began to Make the Cosmos (P)

§1 The physicists and the Stoics (say that) the genesis of the cosmos started from the earth as from the centre; the starting-point of a sphere is (its) centre. (P₁,S₁)

§2 Pythagoras (says that the genesis of the cosmos started) from fire and the fifth element. (P₂,S₂)

§3 Empedocles (says that) first the ether was separated out, second fire and after it the earth. When the earth was excessively constricted by the rush of its revolution, water spouted forth. From it the air was exhaled and the heaven came into being from the ether, the sun from fire, while the earthly regions were condensed from the other (elements). (P₃)

§4 Plato (says that) the visible cosmos came into being in relation to the model of the intelligible cosmos. But of the visible cosmos the soul is prior, and after it there is the corporeal part, consisting of fire and earth first, of water and air second. (P₄,S₄)

§5 Pythagoras says that, since there are five solid shapes, which are also called 'mathematical,' the earth came into being from the cube, fire from the pyramid, air from the octahedron, water from the icosahedron, and the sphere of the universe from the dodecahedron. (P₅,S₃)

§6 Plato pythagorizes in these matters too. (P₆)

2.7 On the Order of the Cosmos (P,S)

§1 Parmenides says there are bands interwoven one around another, the one made up of the rare, the other of the dense, while others between these are mixed from light and darkness. And that which surrounds them all is solid in the manner of a wall, below which there is a fiery band. And the most central (part) is also (solid), around which there is again a fiery band. Of the mixed bands the most central is both the ⟨origin⟩ and the ⟨cause⟩ of all motion and coming into being for all the others, which he also calls 'governing *daimon*', 'holder of the lots', 'Justice' and 'Necessity'. And air is a secretion from the earth which is vaporized through the earth's stronger condensation, while the sun and the Milky Way are the exhalation of fire. The moon is a mixture of both air and fire. The ether encircles above everything else, below which the fiery (part) which we call heaven is disposed, and below it again the earthly regions have their place. (P₁,S₂)

§2 Leucippus and Democritus stretch around the cosmos in a circle a cloak and a membrane woven together by means of hook-shaped atoms. (P₂,S₅)

§3 Epicurus (says that) of some kosmoi the limit is rare but of others it is dense, and of these (limits) some are in motion, while others are unmoved. (P3,S6)

§4 Plato (says that there is) first fire, then ether, followed by air, after which there is water, and earth is last. But sometimes he connects ether with fire. (P4)

§5 Aristotle (says that) impassible ether is first, which is indeed a fifth body. After it (follow) the passible (elements) fire, air, water, and earth is last. And of these circular motion is given to the heavenly (regions), whereas in the case of the (elements) below them, upward (motion is given) to the light ones and downward (motion) to the heavy ones. (P5,S3)

§6 Philolaus (says that there is) fire in the middle around the centre, which he calls the universe's hearth and Zeus' house and the gods' mother, altar and continuity, and measure of nature. And again there is another highest fire, that which surrounds (the universe). The centre is first by nature, and around this ten divine bodies dance: the heaven, the (five) planets, after them the sun, under it the moon, under it the earth, under it the counter-earth, and after all of them there is fire, which has the position of the hearth in relation to the centres. Moreover, he calls the highest part of the surrounding (region) Olympus, in which he says the purity of the elements exists, while the (region) under the orbit of Olympus, in which the five planets together with the sun and the moon are positioned, (he calls) Kosmos. The sublunary and earthly part below these, in which the (realm) of change-loving generation (is located), (he calls) Heaven. In addition, (he says that) wisdom arises concerning what is ordered in the regions on high, whereas virtue arises concerning the disorder of what comes into being, the former being complete, but the latter incomplete. (S4)

§7 Empedocles (says that) the locations of the elements are not completely fixed or determined, but all share in the locations of each other. (P6,S1)

2.8 What the Cause of the Cosmos Having Been Tilted Is (P)

§1 Diogenes Anaxagoras (say that) after the cosmos had been formed and had produced the animals from the earth, the cosmos somehow of its own accord was tilted towards its mid-day region; (this occurred) perhaps through the agency of providence, so that some of the cosmos' parts are uninhabitable but others are habitable in virtue of chilling and excessive heating and a temperate climate. (P1,S1)

§2 Empedocles (says that), when the air gave way through the onrush of the sun, the (north and south) poles were tilted, and the northern parts were lifted

up but the southern parts were lowered, in accordance with which the entire cosmos was tilted as well. (P₂,S₂)

2.9 On What Is Outside the Cosmos, Whether There Is a Void (P)

§1 Pythagoras and his successors (say that) there exists a void outside the cosmos, into which and from which the cosmos breathes. (P₁,S₁)

§2 But the Stoics (say that) there exists a void into which the cosmos dissolves at the conflagration, (and it is) infinite. (P₂,S₂)

§3 Posidonius (says that it is) not infinite, but (is present only) to the extent (that is) sufficient for the (cosmos') dissolution. (P₃,S₃)

§4 Plato Aristotle (say that) there is no void either outside the cosmos or inside it. (P^{EQ}₄,S₄)

2.10 What the Right (Parts) of the Cosmos Are and What the Left (P)

§1 Pythagoras Plato Aristotle (say that) the right parts of the cosmos are the eastern regions, from which the movement has its origin, while the western regions are its left parts. {But they say that the cosmos has neither height nor depth in the sense that height is said to be the dimension upwards from below and depth is the dimension downwards from above. For, (they say), none of the dimensions understood in this way are relevant to the cosmos because it is established around its own centre, from which it is the same (distance) to every (part) and towards which it is the same from every (part).} (P₁,S₂)

§2 Empedocles (says that) the regions at the summer solstice are the right parts (of the cosmos), whereas the regions at the winter solstice are the left parts. (P₂,S₁)

2.11 On Heaven, What Its Substance Is (P,S)

§1 Anaximenes and Parmenides (say that) the outermost periphery is of earth. (P₁,S₁)

§2 Empedocles (says that) the heaven is solid, consisting of air that has been compacted together by fire in crystalline fashion, containing the fiery (element) and the airy (element) in each of the hemispheres. (P₂,S₂)

§3 Anaximander (says that the heaven consists) of a hot and cold mixture. (P₃,S₃)

§4 Parmenides Heraclitus Strato Zeno (say) that the heaven is fiery. (P₃,S₄)

§5 Aristotle (says that the heaven consists) of a fifth body. (P₃,S₅)

2.12 On the Division of Heaven, into How Many Zones It Is Divided (P,S)

§1 Thales, Pythagoras and his successors (say that) the sphere of the entire heaven has been divided into five circles, to which they give the name 'zones'. Of these (the first) is called 'the arctic and always appearing', (the second) 'the summer tropic', (the third) 'the equatorial', (the fourth) 'the winter tropic', and (the last) 'the antarctic and invisible'. In relation to the three middle (circles) the so-called zodiac (circle) has been placed as a diagonal, touching the three of them. But the meridian cuts all of them at right angles from the arctic (regions) to its opposite. (P₁,S₁)

§2 Pythagoras is said to have been the first to have recognized the tilting of the zodiac circle, which Oenopides of Chios appropriates as his own idea. (P₂,S₂)

2.13 What the Substance of the Heavenly Bodies Is, (Both) Planets and Fixed Stars (P,S)

§1 Thales (says that) the heavenly bodies are earthy but inflamed. (P₁,S₁,T₁)

§2 Empedocles (says that they are) fiery, (made) from fire-like (material), which the air enfolded within itself and squeezed out in the first separation. (P₂,S_{2a})

§3 Anaxagoras (says that) the surrounding ether is fiery in substance, but through the vigour of the whirling movement it snatched up rocks from the earth, ignited these and made them into heavenly bodies. (P₃,S₃,T₂)

§4 Diogenes (says that) the heavenly bodies are sponge-like, and he considers them to be the respiratory vents of the cosmos; they are also inflamed. (P_{4a},S_{4a},T₄)

§5 Democritus (says that they are) rocks. (S₅,T₃)

§6 Archelaus (says that they are) clumps of iron, but inflamed. (S₆)

§7 Anaximander (says that they are) wheel-like condensations of air, filled with fire, partly expelling flames from vents. (S₇,T₅)

§8 Parmenides and Heraclitus (says that they are) condensations of fire. (S₈)

§9 Anaximenes (says that) the nature of the heavenly bodies is fiery, but that it also includes some earthy bodies which are borne around with these and are invisible. (S9)

§10 Diogenes, however, (says that) stones that are invisible and in addition nameless are borne around together with the visible heavenly bodies, but that often they fall to the earth and are quenched, just as in the case of the heavenly body in the form of a rock (i.e. meteorite) that descended in a fire-like manner at Aegospotami. (P4b,S4b,T6)

§11 Empedocles (says that) the fixed heavenly bodies were stuck to the crystalline (heaven), but the planets were released. (P5,S2b)

§12 Plato (says that the heavenly bodies are) for the most part fiery, but also partake in the other elements in the manner of glue. (P6,S10,T7)

§13 Aristotle (says that they are made) from the fifth body. (S11,T8)

§14 Xenophanes (says that they consist) of incandescent clouds, and that every day they are extinguished and (then) flare up again at night, just like coals; for the risings and settings (of the heavenly bodies) are (in fact) kindlings and quenchings. (P7,S12,T9)

§15 Heraclides and the Pythagoreans (say that) each of the heavenly bodies exists as a cosmos which includes an earth, air and ether in the unlimited ether. These doctrines are reported in the Orphic (writings), for they (too) make each of the heavenly bodies into a cosmos. (P8,S13,T10)

§16 Epicurus does not reject any of these (views), holding fast to what is possible. (P9,S14)

2.14 On the Shapes of the Stars (P,S)

§1 The Stoics (say that) the stars are spherical, just like the cosmos, the sun and the moon. (P1,S2,T1)

§2 Cleanthes (says that they are) like a cone. (P2,S3,T2)

§3 Anaximenes (says that they) have been affixed to the crystalline (heaven) in the manner of studs. (P3,S1)

§4 But some (say that they) are fiery leaves, like pictures. (P4)

2.15 On the Order of the Heavenly Bodies (P)

§1 Xenocrates thinks that the stars lie on a single plane. (P1,S5)

§2 But the others, the Stoics, (say that) the ones are placed in front of the others in height and depth. (P2,S6)

§3 Democritus (orders) the fixed stars first, then after them the planets, followed by the sun, the light-bringer (i.e. Venus) and the moon. (P3,S1)

§4 Plato after the placement of the fixed stars (arranges) first the star of Kronos called 'the Shining one,' second the star of Zeus (called) 'the Radiant one,' third the star of Ares (called) 'the Fiery one,' fourth the star of Aphrodite (called) 'Dawn-bringer,' fifth the star of Hermes (called) the 'Gleaming one,' sixth the sun, and seventh the moon. (P4,S4)

§5 Of the astronomers* some (order the heavenly bodies) as Plato does, others (place) the sun in the middle of all (the planets). (P5,S7)

§6 Anaximander and Metrodorus of Chios and Crates (say that) the sun has been ordered highest of all (the heavenly bodies), but after it the moon, and below them the fixed stars and the planets. (P6,S2–3)

§7 Parmenides orders the Dawn-star, which is considered by him to be identical with the Evening-star, as first in the ether; after it the sun, beneath which he places the heavenly bodies [i.e. stars] in the fiery region, which he calls 'heaven.' (S8)

2.16 On the Conveyance and Movement of the Heavenly Bodies (P,cf.S)

§1 Anaxagoras Democritus Cleanthes (say that) all the heavenly bodies are borne from east to west. (P1,S1)

§2 Alcmaeon and the astronomers* (say that) the planets are borne in an opposite direction to the fixed stars from west to east. (P2,S4)

§3 Aristotle (says that the heavenly bodies are borne) by the spheres on which each of them is situated, (S5)

§4 Anaximander (says that the heavenly bodies) are borne by the circles and the spheres on which each of them has mounted. (P3,S6)

§5 Anaximenes (says that) the heavenly bodies whirl not beneath the earth but around it. (P4,S2)

§6 Plato and the astronomers* (say that) the 'gleamer' [i.e. Mercury] experiences the same as the 'dawn-bringer' [i.e. Venus], and that they run a course equal to the sun and revolve together with it; and at one time it [i.e. Venus] appears when rising as the 'dawn-bringer,' while at another time when setting it is called the 'evening (star)'. (P5,S3)

§7 Apollodorus in the second (book) of his *On the Gods* (says that) the view that the 'light-bringer' and the 'evening (star)' are the same (heavenly body) is Pythagorean. (S7)

* The term here is *μαθηματικοί*, which can also be translated as 'mathematicians' or 'scientists' depending on the context; also in chs. 2.16, 2.29–31.

2.17 From Where the Heavenly Bodies Obtain Their Illumination (P)

§1 Metrodorus (says that) all the fixed stars are shone upon by the sun. (P1,S4)

§2 Strato too (says that) the stars are illuminated by the sun. (S5)

§3 Diotimus of Tyre, the follower of Democritus, introduced the same opinion as these men. (P2,S1)

§4 Heraclitus and the Stoics (say that) the heavenly bodies are nourished from the earthly exhalation. (P2,S1)

§5 Aristotle (says that) the heavenly beings have no need of nourishment, for they are not perishable but everlasting. (P3,S3)

§6 Plato (says that) the whole cosmos and the stars jointly obtain their nourishment from themselves. (P4,S2)

2.18 On the Stars Called the Dioscuri (P)

§1 Xenophanes (says that) that the star-like appearances on ships are cloudlets that light up according to the kind of movement that they have. (P1,S1)

§2 Metrodorus (says that) they (i.e. the Dioscuri) are the flashing of eyes that gaze with fear and consternation. (P2)

2.19 On Signs of the Seasons Produced by the Heavenly Bodies (P,S)

§1 Plato (says that) the signs relating to winter and summer occur in accordance with the risings and settings of the heavenly bodies, namely the sun and the moon and the other planets and fixed stars. (P1,S2)

§2 Anaximenes, however, (says that) through these (other heavenly bodies) none of these (signs occur), but through the sun only. (P2,S1)

§3 Eudoxus Aratus (say that they occur) jointly through all the heavenly bodies, in (the verses in) which he (i.e. the latter) says:

For he himself (i.e. Zeus) fixed the signs in heaven, marking out the constellations; and for the year he devised (those) heavenly bodies which especially would indicate the happenings ahead. (P3S3)

2.20 On the Substance of the Sun (P,S)

§1 Anaximander (says there) is a circle twenty-eight times the earth, similar to a chariot wheel with a hollow rim, filled with fire, revealing the fire in a particular part through an opening as through a blowtorch, and this is the sun. (P1,S3)

§2 Xenophanes (says that the sun is formed) from incandescent clouds. (S1,T1,cf.P2b)

§3 Anaximenes Parmenides (say that the substance of the sun is) fiery. (S4+5)

§4 Antiphon (says that it is) fire encroaching on the moist air around the earth, and producing sunrises and sunsets by continually leaving the burning air (behind it) and in turn clamping onto the slightly dampened air (before it). (S6)

§5 Xenophanes, (as) Theophrastus has written in his *Physics*, (says that it is formed) from firelets that are gathered together out of the moist exhalation and so gather together the sun. (P2,S2)

§6 Heraclitus Hecataeus Cleanthes (say that the sun is) an intelligent ignited mass (formed) from the sea. (P3,S7+16)

§7 Plato (says that it consists) of fire for the most part, but also has a share of the other elements. (P4,T6)

§8 Anaxagoras, Democritus and Metrodorus (say that it is) an fiery clump or rock. (P5,S8+15(+4),T2)

§9 Thales (says that it is) earthy. (S9,T3)

§10 Diogenes (says that it is) pumice-like, and that rays from the ether fix themselves into it. (S10,T4)

§11 Aristotle (says that it is) a sphere (made up) of the fifth body. (P6,T5)

§12 Philolaus the Pythagorean (says that it is) glass-like, on the one hand receiving the reflection of the fire in the cosmos, on the other hand pushing the light and the heat through towards us, so that in a way there are two suns, both the fiery one in the heaven and the one derived from it which is fire-like through being mirror-like, unless someone will say that there is also a third, the beam spread out towards us from the mirror through reflection; for it is this which we call the sun, like an image of an image. (P7,S11,T7)

§13 Empedocles (says that there are) two suns: (one) the original, which is fire in the one hemisphere of the cosmos and fills the hemisphere, always stationed opposite its own reflection; (the other) the visible sun, which is its reflection in the other hemisphere, namely the one filled with air mixed with heat, arising from the circular earth through a reflection onto the crystal-like Olympus [i.e. heaven], and revolving together with the motion of the fiery (element); to sum up briefly, the sun is a reflection of the fire around the earth. (P8,S12)

§14 Epicurus (says that it is) an earthy concentration inflamed by the fire in its cavities in the manner of a pumice-stone or sponge. (P₉,S₁₃)

§15 Heraclitus (says that it is) an ignited mass, which is kindled in the east and extinguished in the west. (P^G₇)

§16 Parmenides (says that) the sun and the moon have been separated off from the circle of the Milky Way, the former from the more rarefied mixture which is hot, the latter from the denser (mixture) which is cold. (S₁₄)

2.21 On the Size of the Sun (P,S,T)

§1 Anaximander (says that) the sun is equal to the earth (in size), and that the circle from which it has its vent and by which it is moved, is twenty-seven times the earth. (P₁,S₁,T₁)

§2 But Empedocles (says that it), namely the (sun) that appears in virtue of the reflection, (is) equal to the earth (in size). (S₁,Tb₂)

§3 Anaxagoras (says that it is) many times (the size of) the Peloponnese. (P₂,Ta_{2b3})

§4 Heraclitus (says that it is) the breadth of a human foot. (P₃,S₂,Ta_{3b4})

§5 Epicurus (says that it is) the size that it appears, or a just little larger or smaller. (P₄,S₄)

2.22 On the Shape of the Sun (P,S,T)

§1 Anaximenes and Alcmaeon (say that) the sun is flat, like a leaf. (P₁,S₁,₃)

§2 Heraclitus (says that it is) bowl-like, somewhat convex. (P₂,S₂,T₂)

§3 The Pythagoreans (and) the Stoics (say that it is) like a ball, like the cosmos and the stars. (P₃,S₄,T₁)

§4 Epicurus (says that) all the above-mentioned (shapes) are possible. (P₄)

2.23 On the Turnings of the Sun (P,S)

§1 Anaximenes (says that) the heavenly bodies are pushed off course by condensed and resistant air. (P₁,S₁)

§2 Anaxagoras (says that the turnings are caused) by the repulsion of the northern air, which it (the sun) by pushing makes strong as the result of the condensation (that occurs). (P₂,S₂)

§3 Diogenes (says that) the sun is quenched by the cold that collides with the heat. (P4,S3)

§4 Empedocles (says that the turnings are caused) by the sphere that surrounds it (the sun) and prevents it from continuing its course in a straight line, and by the solstitial circles. (P3,S4)

§5 Democritus (says that they are caused) as the result of the whirling that carries it (the sun) around. (S5)

§6 The Stoics (say that) the sun's course is determined by the distance covered in accordance with the food available to it. This is the ocean or the earth, from which it consumes the exhalation. And (they say) the sun as it moves produces a concomitant spiral on the sphere, from the equinoctial (circle) to both the northern and the southern (tropics), which are the limits of the spiral. (P5,S6)

§7 But others (say) that its movement makes a spiral in a straight line by doing this not on a sphere, but on a cylinder. (S7)

§8 Plato Pythagoras Aristotle (say that they result) from the tilting of the zodiac circle, through which the sun moves with an oblique course, and in accordance with the guardianship of the solstitial circles. All these matters the sphere also demonstrates. (P6)

2.24 On the Eclipse of the Sun (P,S)

§1 Thales was the first to say that the sun undergoes an eclipse when the moon with its earthy nature proceeds perpendicularly in between (it and the earth); this is visible by means of reflection when the disc (of a mirror) is placed beneath. (P1,S5)

§2 The Pythagoreans Empedocles (hold a similar view). (S4,6)

§3 Anaximander (says that the sun is eclipsed) when the mouth through which the outpouring of fire occurs is blocked. (P2,S2)

§4 Heraclitus (says that it undergoes an eclipse) in accordance with the turning of its bowl-like shape, so that the hollow aspect faces upwards and the convex aspect faces downwards in the direction of our vision. (P3,S3)

§5 Xenophanes (says that it undergoes an eclipse) through quenching. And another sun occurs in the east. He has also recounted that there was an eclipse [i.e. failure] of the sun for an entire month, and moreover that a total eclipse took place, so that the day appeared as night. (P4,S1)

§6 Some (thinkers say that it is) a concentration of clouds invisibly passing in front of the (sun's) disk. (P5)

§7 Aristarchus makes the sun stand still together with the fixed stars, while he moves the earth in the circle of the sun and (says that) it (the sun) is cast in shadow in accordance with the tiltings of this body [i.e. the earth]. (P6,S7)

§8 Xenophanes says that there are many suns and moons in accordance with the latitudes of the earth and its sections and zones. But at a certain moment the (sun's) disk falls into a section of the earth that is not inhabited by us, and in this way, as if treading on emptiness, discloses an eclipse. The same (thinker) says that the sun advances indefinitely, but seems to go in a circle because of the distance (away from us). (P7,S8)

2.25 On the Substance of the Moon (P,S)

§1 Anaximander (says that the moon is) a circle nineteen times the earth, resembling a chariot wheel, having a hollow rim and full of fire, like the (circle) of the sun, lying tilted, as that one [i.e. circle] does too, with a single blowhole, like a blowtorch; and it undergoes eclipse in accordance with the turnings of the wheel. (P1,S1)

§2 Anaximenes Parmenides Heraclitus (say that) the moon is fiery. (S2–3,T3)

§3 Xenophanes (says that it is) an incandescent compressed cloud, (P2,S4,T1)

§4 but Cleanthes (says that it is) fire-like. (P3,S14)

§5 Posidonius and most of the Stoics, however, (say that it is) mixed out of fire and air. (S15)

§6 Empedocles (says that it is) cloud-like compacted air, fixed by fire so that it forms a compound. (S12)

§7 Plato (says that it is formed) for the most part from the fiery (material). (P4,S13)

§8 Aristotle (says that it is formed) (from the fifth body). (cf. S13a)

§9 Thales (says that it is) earthy. (S5,T2)

§10 Anaxagoras Democritus (say that it is) an inflamed solid mass, which has in it plains and mountains and ravines. (P5,S6,T4)

§11 Diogenes (says that it is) a sponge-like ignited mass. (S7)

§12 Ion (says that it is) a body that is partly glass-like and transparent, partly opaque. (S8)

§13 Berossus (says that it is) a half-inflamed sphere. (S9)

§14 Heraclides and Ocellus (say that it is) earth surrounded by mist. (P6,S10,T6)

§15 Pythagoras (says that it is) a mirror-like body. (P7,S11,T5)

2.26 On the Size of the Moon (P,S)

§1 The Stoics (say that the moon is) larger than the earth, as the sun is also. (P₁,S₃,T₁)

§2 Parmenides (says that it is) equal to the sun (in size), and indeed that it is illuminated by it. (P₂,S₁,T₂)

§3 Aristotle (says that it is) smaller (in size) than the earth, (S₂,T₃)

§4 But others (say that it) has the diameter of a span. (T₄)

2.27 On the Shape of the Moon (P,S)

§1 The Stoics (say that the moon) is like a ball [i.e. spherical], just like the sun. (P₁,S₅)

§2 And it is shaped in many different ways, for it becomes full-moon and half-moon and gibbous and moon-like [i.e. crescent-shaped]. (S₆)

§3 Heraclitus (says that it is) bowl-like. (P₂,S₁)

§4 Cleanthes (says that it is) hat-like. (S₄)

§5 Empedocles (says that it is) disc-like. (P₃,S₂)

§6 But others (say that it is) cylinder-like. (P₄,S₃)

2.28 On the Illuminations of the Moon (P,S)

§1 Anaximander Xenophanes Berossus (say that) the moon has its own light. (P₁,S₁)

§2 Aristotle (says that it has) its own (light), but it is somewhat thinner. (S₂)

§3 The Stoics (say that its light is) dim in appearance, for it is air-like. (S₃)

§4 Antiphon (says that) the moon has its own gleam, and the gleam that is hidden around it is dimmed by the approach of the sun, since it is natural for the stronger fire to make the weaker one dim, which indeed also occurs in the case of the other heavenly bodies. (P₂,S₄)

§5 Thales was the first to say that it is illuminated by the sun. (P₃,S₅)

§6 Pythagoras Parmenides Empedocles Anaxagoras Metrodorus (say) likewise. (S₆)

§7 Heraclitus (says that) the sun and the moon undergo the same experience: since they are heavenly bodies that are bowl-like in their shapes and receive their radiance from the moist exhalation, they light up in their appear-

ance (towards us), the sun doing so more brightly because it moves in air that is purer, whereas the moon moves in murkier (air) and for this reason appears dimmer. (P4,S7)

2.29 On the Eclipse of the Moon (P,S,T)

§1 Anaximander (says that the moon is eclipsed) when the orifice on the wheel (of fire) is obstructed. (P1,S1)

§2 Berossus (says that it is eclipsed) in accordance with the turning of the uninflamed part (of the moon) towards us. (P2,S2)

§3 Alcmaeon Heraclitus Antiphon (say that it is eclipsed) in accordance with the turning of the bowl-like (shape of the moon) and its lateral motions. (P3,S3)

§4 Some of the Pythagoreans according to the research of Aristotle and the assertion of Philip of Opus (say that it is eclipsed) through reflection and obstruction, sometimes of the earth and sometimes of the counter-earth. (P4,S4)

§5 But among more recent thinkers there are some who are of the opinion (that an eclipse takes place) in accordance with the dissemination of a flame that slowly catches alight in an orderly manner until it produces the complete full moon, and (then) analogously diminishes again until the conjunction (with the sun), when it is completely extinguished. (P5,S5)

§6 Xenophanes (says that) the monthly concealment too (takes place) by quenching. (S6)

§7 Thales Anaxagoras Plato Aristotle the Stoics (and) the astronomers* agree in unison that it (the moon) produces the monthly concealments by travelling together with the sun and being illuminated by it, whereas it produces the eclipses by descending into the shadow of the earth which interposes itself between the two heavenly bodies, or rather when the moon is obstructed (by the earth). (P6,S7)

§8 Anaxagoras, as Theophrastus says, (says that it is eclipsed) also when it happens that bodies (in the space) below the moon interpose themselves. (S8)

* On the term *μαθηματικοί* see the note to the translation of ch. 2.15.

2.30 On Its Appearance and Why It Appears (To Be) Earthy (P,S)

§1 Some of the Pythagoreans, of whom Philolaus is one, (say that) its earthy appearance is caused by the fact that the moon is inhabited, just like our earth, (but) with animals and plants that are larger and more beautiful. For (they say that) the animals on it are fifteen-fold in power and do not discharge any excrement, and that the day is the same in length [i.e. fifteen-fold]. (P₁,S₁)

§2 But others (say that) the appearance in the moon is a reflection of the sea inhabited by us (which is located) beyond the circle of the Torrid zone. (S₂)

§3 Anaxagoras (says that it is caused by) unevenness of its composition on account of cold being mixed in together with the earthy (component), the moon having some parts that are high, others that are low, and others that are hollow. {Moreover, (he says that) the dark (component) has been mixed in with the fire-like (component), the effect of which causes the shadowy (colouring) to appear; for this reason the heavenly body is called 'falsely appearing'.} (P₂,S₃)

§4 Democritus (says that it is caused by) the shadow effects of the high areas in it; for it has glens and vales. (S₄)

§5 Parmenides (says that it occurs) on account of the dark (component) having been mixed in with the fire-like (component) in it; for this reason the heavenly body is called 'falsely appearing'. (S₅)

§6 The Stoics (say that) on account of the air mixed in the substance its composition is not unblemished. (P₃,S₆)

§7 Aristotle (says that) its composition is not unblemished because the ether, which he calls the fifth body, becomes aerated close to the earth. (S₇)

§8 The successors of the astronomers* regard its compositional unevenness as the cause. Just as in the case of clouds illuminated by the sun the thinner parts are brighter and the thicker parts are darker, so it happens in the case of the moon, which resembles a cloud-like compressed body and is illuminated by the sun. (S₈)

§9 Xenophanes (says that) the sun is useful for the generation and administration of the cosmos and the living beings in it, but the moon is redundant. (S₉)

2.31 On the Distances of the Moon (P,S,cf.T)

§1 Empedocles (says that) the moon is double the distance from the sun that it is from the earth. (P₁,S₁,T₁)

§2 But the successors of the astronomers* (say that it is) eighteen times. (P2,S2)

§3 Eratosthenes (says that) the sun is distant four hundred and eight myriads of stades from the earth, and that the moon is distant seventy-eight myriads of stades from the earth. (P3,S3,T2)

§4 Empedocles (says that) the distension (of the heaven) in its breadth is greater than the height from the earth to heaven, which is its extension from us, the increased extent of the heaven having occurred for the reason that the cosmos is lying (on its side) in the manner similar to an egg. (S4)

§5 But Boethus understands the extent as a matter of appearance, not of reality. (S5)

2.32 On the Year, How Great the Time of (the Revolution of) Each of the Planets Is, and What the Great Year Is (P,cf.S)

§1 A year for Saturn is a period of thirty years, for Jupiter it is twelve (years), for Mars two (years), for the Sun twelve months; and the same (months are the period) for Mercury and Venus, for they move at the same speed. (The period) of the moon is thirty days, for this is the complete month from its appearance to the conjunction (with the sun). (P1,S1)

§2 But (they say that) the so-called Great year occurs whenever (the planets) reach the (same) locations from which they commenced their motion. (S2)

§3 But as far as the Great year is concerned, some (thinkers) place it in the eighth year, (P2,S3)

§4 others in the nineteenth year, (P3,S4)

§5 others in the years that are a fourfold [i.e. in the 76th year], (S5)

§6 yet others in the 60th year minus one, among whom are Oenopides and Pythagoras. (P4,S6)

§7 But there are others who place it in the so-called starting-point of time, and this is the return of the seven planets on the same day of their movement from the beginning. (S7)

§8 Heraclitus (says that the Great year consists) of 18000 solar years. (P5,S8)

§9 Diogenes the Stoic (says that the Great year consists) of 365 years times what the (Great) year was according to Heraclitus. (P6,S9)

§10 But others (say that the Great year occurs) every 7777 (years). (P7)

* On the term *μαθηματικοί* see the note to the previous chapter.

Book 3 Meteorology and the Earth

AËTIUS
ON THE VIEWS (OF THE PHILOSOPHERS)

BOOK 3
in which the following chapter headings (are found):

[Proem]

1. On the circle of the Milky Way
2. On comets and shooting stars and beams
3. On thunders, lightnings, thunderbolts, firewinds and typhoons
4. On clouds, mist, rains, dew, snow, hoar-frost, hail
5. On the rainbow
- 5a. [formerly 18] On the halo
6. On rods
7. On winds
8. On winter and summer
9. On the earth, and what its substance is and how many there are
10. On the shape of the earth
11. On the location of the earth
12. On the inclination of the earth
13. Whether the earth is at rest or moves
14. On the division of the earth, how many zones there are
15. On earthquakes
16. On the sea, how it came to be and how bitter it is
17. How low and high tides occur

[Proem]

§1 Having in the previous (Books) systematically and by way of an epitome gone through the account of the things in the heavens—of which the moon is the boundary—, I shall turn in the third (Book) to the things on high. These are situated from the orbit of the moon down to the position of the earth, which they believe to occupy the place of the centre in the circumference of the sphere. I shall begin from there [i.e. from the circumference]. (P)

3.1 On the Circle of the Milky Way (P,S)

§1 It is a cloud-like circle in the air, continually visible, called Milky Way because of its white colour. (P1,S1)

§2 Some of the Pythagoreans said (that it) is the (result of the) scorching by a heavenly body which departed from its proper place, and the region through which it moved, this it burned in a circle at the time of the conflagration caused by Phaethon. (P2,S2)

§3 But others (of the Pythagoreans) said that originally the sun's orbit followed this route. (S3)

§4 Some say, however, that it is an appearance, as in a mirror, of the sun, which bends back [i.e. reflects] its rays against the heaven, just as what happens both in the case of the rainbow and in that of the clouds. (S4)

§5 Metrodorus (says that it occurred) through the passage of the sun, for this is the circle of the sun. (P3,S5)

§6 Parmenides (says that) the whitish colour is the result of the mixture of the dense and the rare (element). (P4,S6)

§7 Anaxagoras (says) that the shadow of the earth rests upon this section of the heaven (namely, where the Milky Way is visible), when the sun, having arrived under the earth, no longer illuminates everything. (P5,S7)

§8 Democritus (says it is) the combined illumination of numerous and small and contiguous stars giving off light together, because of the density. (P4,S6)

§9 Aristotle (says it is) an ignition of a large and continuous (portion) of the dry exhalation; thus (we have) a head of hair [i.e. the tail of a comet] (consisting) of fire, underneath the aether, lower than the planets. (P7,S9)

§10 The Stoics (say it is) a loose-textured form of the aetherial fire, higher than the planets. (P^G7)

§11 Posidonius (says it is) a solid structure (consisting) of a fire that is rarer than a star but denser than the brightest light. (P8,S10)

3.2 On Comets and Shooting Stars and Beams (P,S)

§1 Some of the successors of Pythagoras* say that the comet is one of those stars which are not always visible, but at a certain time they periodically appear above the horizon. (P1,S1)

§2 But other (successors of Pythagoras say that) it is the reflection of our vision upon the sun, similar to the images that are reflected in mirrors. (P2,S2)

§3 Anaxagoras Democritus (say that) it is a conjunction of two or even more stars according to their giving off light together. (P3,S3)

§4 Aristotle (says that) it is a fiery structure consisting of the dry exhalation from the earth. (P4,S4)

§5 Strato (says that) it is the light of a star enclosed in a compact cloud, as is the case (with fire) in lanterns. (P5,S5)

§6 Heraclides of Pontus (says that) it is a cloud high in the sky illuminated by a light high in the sky. He provides the same causal explanation for bearded star, halo, beam, pillar, and their ilk, just as of course all the Peripatetics do, namely that these (phenomena) arise according to the configurations of the clouds. (P6,S6)

§7 Epigenes (says that) it is the ascent of inflamed pneuma mixed with earth. (P7,S7)

§8 Boethus (says that) it is an appearance of ignited air. (P8,S8)

§9 Diogenes (says that) the comets are stars. (P9,S9)

§10 Anaxagoras (says) that the (phenomena) called shooting stars fall down from the aether like sparks, which is why they are also immediately extinguished. (P10,S10)

§11 Metrodorus (says that) that a violent immission into the clouds of (the light of) the sun in the manner of a projectile often causes the emission of sparks. (P11,S11)

§12 Xenophanes (says that) that all these (phenomena) are combinations or movements of ignited clouds. (P12,S12)

3.3 On Thunders, Lightnings, Thunderbolts, Firewinds (*Presteres*) and Typhoons (P,S)

§1 Anaximander (says that) all these [sc. five] result from the *pneuma*. For when air surrounded by a thick cloud bursts out, having forced its way owing to its being constituted of small particles and of its lightness, then the breaking forth produces the noise and the contrast with the blackness of the cloud the piercing brightness. (P1,S1)

§2 Anaximenes agrees with him, citing in addition what occurs in the case of the sea, which flashes when split by the oars. (S2)

§3 Metrodorus (says that) when *pneuma* falls upon a cloud, which has become frozen through its density, it produces the noise by breaking it up, flashes

* On the translation of multiple name-labels see the User's guide to the translation.

through the impact and the splitting, and throws off a thunderbolt through the velocity of its movement, also making use of the sun's heat. But if the (resultant) thunderbolt is weak, it converts it into a firewind (*prester*). (P2,S3)

§4 Anaxagoras (says that) when the hot falls onto the cold (that is, an aetherial portion into an air-like one), it produces thunder by its noise and lighting by its colour as set off against the blackness of the cloud; by the mass and size of its light (it produces) the thunderbolt; by fire containing a greater multitude of corpuscles the *typhon*; by fire mingled with a cloud the firewind. (P3,S4)

§5 Archelaus says the same, citing in addition the effect of inflamed stones being submerged in cold water. (S5)

§6 Xenophanes (says that) lightning arises when clouds start to shine forth because of their movement. (S6)

§7 Empedocles (speaks of) light falling upon a cloud, shutting out the resisting air. Its quenching and destruction produce the crash and its flash the lightning. The thunderbolt is the lightning's intensity. (S7)

§8 Diogenes (speaks of) fire falling upon a wet cloud. By its quenching it produces thunder, by its flashing lightning. He also adduces the *pneuma* as an accessory cause. (S8)

§9 Heraclitus (says that) thunder (results) from gatherings of winds and clouds and impacts of *pneumata* upon the clouds, lightnings when what is evaporated catches fire, and firewinds through the burnings and quenches of clouds. (S9)

§10 Leucippus (says that) the powerful escape of fire cut off inside very dense clouds produces thunder. (S10)

§11 Democritus (says that) thunder results from a compound of uneven composition, which forces its way out of the cloud containing it in a downward motion. Lightning is a collision of clouds because of which the fire-engendering particles are filtered through their quite empty interstices and are pushed through together while rubbing against each other. A thunderbolt occurs whenever the motion forces its way that is generated from fire-engendering particles that are purer and finer, more even and 'close-fitted', as he writes himself. A firewind arises whenever compounds of fire containing much void, detained in quite empty places, assume a bodily form in the envelopes of their own membranes, and being composed of many ingredients acquire an impulse towards heaviness. (S11)

§12 Chrysippus (says) lightning is the ignition of clouds being rubbed and ruptured by *pneuma*, and thunder is the sound of these. Thunder and lightning both arise in the air at the same time, but we apprehend the lightning sooner on account of vision being sharper than hearing. Whenever the *pneuma*'s motion becomes stronger and fiery, a thunderbolt is produced; whenever the *pneuma*

escapes all together and is less inflamed, a firewind arises; and whenever the *pneuma* is even is less inflamed, a *typhon*. (S12)

§13 Aristotle (says) that such things too result from the dry exhalation. When it encounters the moist (exhalation), it forces its way out, and the noise of the thunder is produced by the friction and the bursting, while the ignition of the dry (ingredient) brings about the lightning flash. (P5a,S13)

§14 Strato (says that such things occur) whenever hot yields to cold, when it happens that it is forced out: thunder through the bursting out, the lightning flash through the light, the thunderbolt through the speed, firewinds and *typhons* through the excessive quantity of matter which each of them draws to itself, hotter (matter) in the case of the firewind, denser in that of the *typhon*. (P5b,S14)

§15 The Stoics (say that) thunder (is a) collision of clouds, lightning an ignition through friction, thunderbolt a stronger flash, firewind a slower one. (P4, S15)

3.4 On Clouds, Mist, Rains, Dew, Snow, Hoar-Frost, Hail (P,S)

§1 Anaximenes (says that) clouds occur when air becomes more condensed, and (that) the rains are squeezed out when it becomes even more compacted; and hail (occurs) when water freezes during its downward course, and snow when a pneumatic ingredient is amalgamated with the moisture. (P1,S1)

§2 Anaxagoras (says that) clouds and snow occur similarly (sc. as according to Anaximenes), but (that) hail is formed whenever some particles are ejected from the frozen clouds towards the earth, which form into balls as they become cold in their downward movement. (S2)

§3 Metrodorus (says that) clouds are formed by the air from the watery updraught. (P2,S3)

§4 Xenophanes (says that) atmospheric phenomena result from the heat of the sun as the preliminary cause. For when moisture is drawn up from the sea and its fresh part is separated off because of its fine-grained consistency, clouds accumulate as it becomes misty, rain is shed owing to condensation, and winds arise owing to evaporation. For he literally writes 'source of water is the sea.' (S4)

§5 Epicurus (says that they accumulate) from atoms; and that hail is formed in round figures and rain gradually acquires its form in its lengthy descent. (P3,S5)

§6 *** and that it (?) produces a *pneuma* by pushing the clouds to one side, rain by liquefying (them), hail by compressing (them), and snow by incorporating a bit of airy substance. (S6)

3.5 On the Rainbow (P,S)

§1 Meteorological phenomena are of two sorts. Some, such as rain and hail, have a real subsistence, others (exist) only in appearance and do not have a separate subsistence. To give an example: when we are sailing the land appears to be in motion. The rainbow thus exists in appearance only. (P₁,S₁)

§2 Plato says that human beings provided the rainbow with a descent from Thaumais, because they admired (*thaumaisai*) it. Homer: 'as he extends for mortals a lurid rainbow'. For this reason some also told the story that it has a head like a bull, by which it swallows up rivers. (P₂,S₂)

§3 How, then, does the rainbow occur? We in fact look along lines that are straight or that are bent or that are refracted, lines that are hidden and (only) visible to reason and incorporeal. Looking along straight lines we see what is in the air and (what can be seen through) transparent stones and horn, for all these bodies have very fine particles. Bent lines we see occurring in water, for the visual ray is bent because the matter of water is denser. This is of course why from afar we see the oar bending in the sea. The third way of seeing (involves) what is reflected, such as images in mirrors. (P₃,S₃)

§4 Well, the condition of the rainbow is of the last-mentioned sort. We should assume that the moist exhalation changes into a cloud, and in a short time from this (cloud) into small and moist droplets. When the sun is in the west, it will necessarily follow that the rainbow appears opposite to the sun, when the visual ray, impacting upon the droplets, is reflected, so that the rainbow occurs. (P₄,S₄)

§5 The droplets are forms not of shape but of colour. The first (part) has a dark red, the second a sea-violet and purple, the third a dark blue and light green (colour). Possibly this dark red colour (comes about) because the splendor of the sun, falling upon (these droplets), and the sudden refraction of its brilliance produce the colour red and dark red. The second part, becoming turbid and more loosened from the brilliance because of the droplets, becomes sea-violet, for this is a looser form of the (colour) red. The outer (part), becoming even more turbid, changes into the (colour) green. (P₅,S₅)

§6 Now this can be tested by experiment. If one, standing opposite the sun, takes water in one's mouth and spits it out, and the droplets take on a reflection towards the sun, he will find that a rainbow occurs. Patients suffering from ophthalmitis have the same experience when they look into the lamplight. (P₆,S₆)

§7 Anaximenes (says that) the rainbow occurs through the mirroring of the sun's light upon a dense, thick, and black cloud, on account of the inability of the rays to collect together and penetrate to the other side. (P₇)

§8 Anaxagoras (says that the rainbow is) a reflection of the sun's radiance from a dense cloud, and that it is situated directly opposite to the heavenly body that shows itself as in a mirror. He gives a similar causal explanation of the so-called mock-suns (*parhelia*), which occur around the Black Sea. (P8)

§9 Metrodorus (says that) when the sun shines through the clouds the cloud becomes bluish-grey and the beams turn red. (P9)

3.5a [Formerly 18] On the Halo (P,S)

§1 The halo is produced in the following way: between the moon or another heavenly body and (our organ of) vision there is situated a thick and misty (mass of) air. Then, when our vision is refracted and broadened in this (air) and next in this condition falls upon the orb of the heavenly body at its outer circumference, a circle seems to appear around the heavenly body (this apparent circle is called 'halo' because it resembles a '*halos*' ('round threshing-floor')); the apparition seems to come to be in the place where the modification of our vision happened to occur. (P1)

3.6 On Rods (P,S)

§1 The phenomena that happen in the case of rods and counter-suns exist through a mixture of real subsistence and mere appearance, because what is seen are really clouds, not however with their own colour but with another one that shines forth through reflection. With all phenomena of this kind the properties (are) similar, both those that are according to nature and those that are acquired. (P1)

3.7 On Winds (P,S)

§1 Anaximander (says that) wind is a flow of air, the sun putting into motion or melting its subtlest and moistest parts. (P1)

§2 The Stoics (say that) each draught (*pneuma*) is a flow of air, which however changes its appellation according to the differences of the places (from which it blows). Thus the *Zephyr* is named from the darkness and the west, the *Apeliotes* from the east and the sun, the *Boreas* from the north, and the *Lips* from the southern regions. (P2)

§3 Metrodorus (says that) from a moist exhalation heated by the sun an onset of summer winds occurs. And the Etesian winds blow when the air that is more compacted in the north flows together with the sun when it recedes at the summer solstice. (P₃)

§4 Aristotle (says that) wind is the first updraught of the dry exhalation. There sometimes occurs a mixing of the dry exhalation with the wet. (S₁)

3.8 On Winter and Summer (P)

§1 Empedocles and the Stoics (say) that winter occurs when the air prevails by its thickness and presses the sun upwards; and summer-time because fire (prevails), when it presses the sun downwards. (P₁, S₁)

§2 Now I have described the things on high, the account will proceed to the things on earth. (P₂)

3.9 On the Earth, and What Its Substance Is and How Many There Are (P, S)

§1 Thales and his successors (say) there is (only) one earth. (P₁)

§2 Hicetas the Pythagorean (says that) there are two, this one and the counter-earth. (P₂)

§3 The Stoics (say that) there is one earth, and that it is finite. (P₃)

§4 Xenophanes (says that) it is rooted 'towards infinity' on its nether part; and that it has been compounded from air and fire. (P₄)

§5 Metrodorus (says that) the earth is a sediment and dregs of the water, but the sun (is the same) of the air. (P₅)

3.10 On the Shape of the Earth (P, S)

§1 Thales and the Stoics (say that) the earth is like a ball [i.e. spherical]. (P₁)

§2 Anaximander (says that) the earth resembles a column drum, (with curved surfaces).

§3 Anaximenes (says that it is) like a slab. (P₃)

§4 Leucippus (says that it is) like a (kettle-)drum. (P₄)

§5 Democritus (says that it is) like a disk in breadth, but hollow at the centre. (P₅)

3.11 On the Placement of the Earth (P,S)

§1 The successors of Thales (say) the earth (is) in the middle. (P₁)

§2 Xenophanes (says it is) first, for it is rooted in infinity. (P₂)

§3 Philolaus the Pythagorean (says that) the fire is in the middle (for this is the 'hearth' of the universe), that the counter-earth is second, and third the earth we inhabit, situated opposite the counter-earth and circulating along with it, which is why those in that one are not seen by those in this one. (P₃)

3.12 On the Tilting of the Earth (P)

§1 Leucippus (says that) the earth slopes down towards the southern parts because of the loose texture in its southern (parts), since the northern (parts) are congealed because refrigerated by the frost, whereas the opposite (parts) have been ignited. (P₁)

§2 Democritus (says that) because the southern part of what is around it is weaker the earth becomes larger and is tilted in that direction; for the north is unmixed while the south is mixed; for this reason (the earth) has become heavy in that direction, where there is more of it because of the fruits (of the earth) and their increase. (P₂)

3.13 Whether the Earth Is at Rest or Moves (P,S)

§1 The others (say that) the earth is at rest. (P₁)

§2 But Philolaus the Pythagorean (says that) it moves about the fire in an oblique circle in the same [or: a similar] way as sun and moon. (P₂)

§3 Heraclides of Pontus and Ecphantus the Pythagorean cause the earth to move, though not from one place to another, but by revolution in the manner of a wheel upon an axle, from west to east about its own centre. (P₃)

§4 Democritus (says that) the earth originally wandered around because of its small size and lightness, but having become denser and heavier in time it came to a halt. (P₄)

3.14 On the Division of the Earth, How Many Are Its Zones (P)

§1 Pythagoras (says that) the earth, in analogy to the sphere of the {whole} heaven, is divided into five zones: artic, antarctic, summer (tropic), winter

(tropic), equatorial, of which that in between the summer and winter (zone) delimits the middle (part) of the earth, which for that reason [sc. because it occupies the middle section] is called scorched (zone); the inhabitable (zone) is (the summer (tropic)), which is one that is temperate. (P₁)

§2 Parmenides was the first to define the inhabited zones of the earth under the two tropic zones. (P₂ = P_{3.11.4})

3.15 On Earthquakes (P,S)

§1 Thales and Democritus assign the cause of earthquakes to water, (P₁)

§2 whereas the Stoics say an earthquake is the moisture in the earth that is separated and bursts out into the air. (P₂)

§3 Anaximenes (says that) the dryness and wetness of the earth are the cause of earthquakes, the former of which is produced by droughts, the latter by heavy rains. (P₃)

§4 Anaxagoras (says that they are caused) by the striving of the air to get out, which when it hits the compactness of the surface is not able find a way out and so shakes what surrounds it with a tremor. (P₄)

§5 Aristotle (says that they are caused) by the enclosing from all sides (of the hot) by the cold, which presses on it both from below and from above; for the hot strives to get higher up, as it is light; for this reason, the dry exhalation, having become imprisoned, is agitated because of the obstruction and the convolutions. (P₅)

§6 Metrodorus (says that) no body which is in its proper place moves, unless one actually pushes it forward or drags it down; therefore the earth does not (move) either, as it is located in its natural place, though some places are collapsing because of the trembling. (P₆)

§7 Parmenides Democritus (say that the earth) remains in equilibrium because it is equidistant on all sides (sc. from the surrounding heavens); it has no ground for moving this way rather than that; because of this it is merely shaken, but it does not move. (P₇)

§8 Anaximenes (says it does not move) because of its broad surface being carried upon the air. (P₈)

§9 Others believe (that it is carried) upon the water, as boards and broad planks on waters [i.e. watery surfaces], and for this reason it moves. (P₉)

§10 Plato (says that) there are six directions of motion in all: up and down, to the right and to the left, forwards and backwards; it is not possible that the earth should be moved in any of these modes, for it is located at the most equal distance (sc. from the surrounding heavens); it remains immobile, since it does

not have any preference causing it to incline in any direction more (than in any other); but it has places that shake because of its thinness. (P10,S1)

§11 Epicurus (says) that it is possible that the earth moves when it is thrown upwards and as it were struck from beneath by thick and humid air that lies beneath it; but it is also possible that, as it is full of holes in its nether parts, it is shaken by the wind which is dispersed through its cavernous hollows. (P11)

3.16 On the Sea, How It Came To Be and How Bitter It Is (P,S)

§1 Anaximander says that the sea is the remainder of the primal moisture; the greatest part of which the fire dried up, and what is left altered its quality [i.e. became bitter] because of the great heat. (P1)

§2 Anaxagoras (says that), when in the beginning water existed as a standing pool, it was scorched by the movement of the sun about it and the fattish part of the water was exhaled, (then) what was left turned to saltiness and bitterness. (P2)

§3 Empedocles (says that the sea is) 'sweat of the earth' heated by the sun because of the greater compression [or: its closeness to the surface]. (P3)

§4 Antiphon (says that the sea is) sweat of the hot, from which the moist remainder was separated, becoming salty by drying out, as happens with all sweat. (P4)

§5 Metrodorus (says that the sea) by being strained through the earth acquired some part of its density, just as is the case with what is filtered through ashes. (P5)

§6 The successors of Plato (say that) of the elemental water the part that comes together by cooling from air becomes sweet, but (the part) that is exhaled from the earth through heating and burning (becomes) salty. (P6)

3.17 How Do Low and High Tides Occur (P,S)

§1 Aristotle Heraclides (say the tides are caused) by the sun, which moves the majority of the winds and whirls them about; as these throw themselves upon the Atlantic sea, this is thrust forward and swells and produces the high tide; when they are ceasing the sea pulls back and subsides, which is the low tide. (P1,S1)

§2 (Dicaearchus) of Messene, too, attributes the cause to the sun, which instigates flooding in whatever regions of the earth it reaches, but gradually

draws them away with itself in whatever regions it happens to recede from. These events take place in relation to the morning and afternoon shifts. (S2)

§3 Pytheas of Marseille (says that) the high tides occur through the waxing of the moon, the low tides through its waning. (P2,S3)

§4 Posidonius (says) the winds are moved by the moon, and the seas in turn by these (winds), in which [i.e. the seas] the aforesaid effects [i.e. the tides] take place. (S4)

§5 Plato attributes them to the oscillation of the waters. For there is a sort of natural oscillation that through a tunnel in the earth moves the reflux hither and thither; and by this reflux the seas surge back. (P3,S5)

§6 Timaeus of Taormina gives as the cause those rivers that fall from the mountains of Celtic Gaul into the Atlantic. Upon their entering upon that sea, they violently press upon it, and so cause the high tide; but when they withdraw by their resting they produce the low tides as well. (P4,S6)

§7 Crates the grammarian gives as the cause the reciprocal push and pull of the sea. (S7)

§8 Apollodorus of Corcyra (gives as the cause) the refluxes from the Ocean. (S8)

§9 Seleucus the astronomer*, who wrote against Crates (and) who, too, moves the earth, says that the revolution of the moon hinders its rotation (i.e. of the earth); as the wind between these two bodies (the earth and the moon) withdraws from or falls upon the Atlantic Ocean, correspondingly the sea produces its waves. (P5,S9)

* On the term μαθηματικός here see the note to the translation of ch. 2.15.

Book 4 Psychology

AËTIUS
ON THE VIEWS (OF THE PHILOSOPHERS)

BOOK 4
in which the following chapter headings (are found):

- [Proem]
1. On the rising of the Nile
 2. On the soul
 3. Whether the soul is a body and what its substance is
 4. On the parts of soul
 5. On the regent part and in which (part of the body) it is found
 6. On the motion of soul
 7. On the indestructibility of soul
 - ⟨7a. On intellect⟩
 8. On sensation and sense-objects
 9. Whether sensations and impressions are true
 10. How many senses there are
 11. How the sensation and the conception and the reason [or: speech] that is internally placed occur
 12. In what respect impression, impressor, imagination, figment are different
 13. On sight, how we see
 14. On reflections in mirrors
 15. Whether darkness is visible
 16. On hearing
 17. On smelling
 18. On tasting
 19. On voice
 20. Whether voice is incorporeal and how echo occurs
 21. How the soul comes to be sentient and what its regent part is
 22. On respiration
 23. On bodily affections and whether the soul experiences pain along with these

[Proem]

§1 The parts of the cosmos having now been treated systematically, I shall continue in the direction of the particular phenomena. (P)

4.1 On the Rising of the Nile (P)

§1 Thales believes that the Etesian (i.e., north-west) winds blowing opposite Egypt swell the volume of the Nile because its outflows are beaten back by the swelling of the sea that outflanks it. (P1)

§2 Euthymenes of Massilia (is of the opinion) that the river is filled from the Ocean and from the outer sea, which according to him is sweet. (P2)

§3 Anaxagoras (believes it is filled) from the snow in Aethiopia, which melts in summer but cools in winter. (P3)

§4 Democritus (believes that), when the snow in the northern parts (of the earth) melts and dissolves at the times of the summer solstice, clouds are formed by compression from the (moist) vapours; and that these, when driven towards the south and †Egypt† by the Etesian winds, produce torrential rains, by which the pools and the river Nile are filled. (P4)

§5 Herodotus the prose writer (says that the river) is borne from its springs in equal measure in winter and in summer, but seems to be less in winter because in that season the sun comes closer to Egypt and draws the streams up as vapour. (P5)

§6 Ephorus the historian says that in the summer the whole of Egypt grows slack and as it were is sweating out the large stream. Arabia and Libya also contribute because of their loose-textured and rather sandy nature. (P6)

§7 Eudoxus says that the priests state that (the cause of the flood is) rain-water corresponding to the reciprocal change of the seasons. For when it is summer for us who live under the summer solstice, then it is winter for those who live on the other side of the meridian under the winter solstice, which is from where the floodwater rushes down. (P7)

4.2 On the Soul (P,S,T)

§1 Thales was the first to declare that the soul is a nature that is ever-moving, or rather self-moved. (P1,S1,T1)

§2 Alcmaeon (says that it is) a nature that is self-moved according to everlasting motion, and for this reason he assumes that it is immortal and resembles the divine beings. (S4,T2)

§3 Pythagoras (says that it is) a number moving itself; he takes number as denoting Intellect, (P2,S2,T3)

§4 and similarly Xenocrates (says this) as well. (S3,T4)

§5 Plato (says that it is) an intelligible substance, moved of itself, in motion according to a numerical harmony. (P3,T5)

§6 Aristotle (says that it is) the first entelechy [i.e. 'actuality'] of a body that is natural, organic, and potentially possessing life; and this entelechy must be understood to denote form and activity. (P4,S7,T6)

§7 Dicaearchus (says that it is) a harmony of the four elements. (P5,S5,T7)

§8 Asclepiades the doctor (says that it is) a common exercising of the senses. (P6,S6)

4.3 Whether the Soul Is a Body and What Its Substance Is (P)

§1 All those arrayed previously assume that the soul is incorporeal, saying that it is self-moved, and an intelligible substance, and the actuality of the natural organic (entity) which has life. (P1)

§2 Anaximenes Anaximander Anaxagoras Archelaus Diogenes said that it is air-like and a body. (P2,S1,T1)

§3 The Stoics (say that) it is an intelligent warm *pneuma*. (P3,S2,T2)

§4 Parmenides and Hippasus and Heraclitus (say that) it is fire-like. (S3,T3)

§5 Democritus (say that) it is a fiery compound of things which are observable by reason, having forms that are spherical but with the potency of fire; which is a body. (P4,S4)

§6 Heraclides defined the soul as light-like. (S5,T5)

§7 Leucippus (says that) the soul (consists) of fire. (S6)

§8 Diogenes of Apollonia (says that) the soul (consists) of air. (S7)

§9 Hippo (says that) the soul (consists) of water. (S8)

§10 Xenarchus the Peripatetic and certain others of the same School (say that it is) the completion and entelechy [i.e. actuality] with respect to the form, existing *per se* while simultaneously being conjoined with the body. (S9)

§11 Epicurus (says that it is) a mixture of four ingredients, (namely) of a fiery quality, an aerial quality, a pneumatic quality, and of a fourth quality that is nameless; this (last-mentioned), for him, is the perceptive part. Of these the *pneuma* brings about movement, the air rest, the warm (component) the per-

* On the translation of multiple name-labels see the User's guide to the translation.

ceptible warmth of the body, while the anonymous (component) brings about the perception in us (humans), for perception is not present in any of the elements that have names. (P₅,S₁₀,T₅)

§12 Empedocles (says that it is) a blend of an aetherial and an aerial (and a watery and an earthy) substance. (T₆)

§13 Critias said that it is (a blend) of blood and [or: that is,] of moisture. (T₇)

§14 Heraclitus (says that) the Soul of the cosmos (is) an exhalation from the moistures (that are) in it (sc. in the cosmos), and (that) the soul in living beings (derives) from the exterior exhalation as well as from that which is within them (sc. the living beings), (and is) of the same kind. (P₆)

4.4 On the Parts of Soul (P,S)

§1 Pythagoras Plato according to their most general definition (say that) the soul is bipartite, for it has a rational (part) on the one hand and an irrational on the other. But according to what is proximate and precise it is tripartite, for they divide the irrational into the spirited and the concupiscible. (P₁,T₁)

§2 Xenocrates (says that) one (part) of the soul is perceiving, and the other rational. (T₂)

§3 Aristotle (said) there are five activities (of soul), the appetitive, the nurturing, the perceiving, the locomotive, the cogitating. (T₃)

§4 The Stoics say the soul consists of eight parts: five perceiving parts, (viz.) seeing, hearing, smelling, tasting, touching; as sixth the speaking (part); as seventh the seminal (part); as eighth the regent (part) itself, from which all these (other parts) are extended through their own organs, similarly to the tentacles of an octopus. (P₂,T₄)

§5 Apollonphanes (says that the soul consists of nine parts). (S₁)

§6 The Successors of Pythagoras, positing that the body is a blend of five elements—for to the four they added the aetherial (element)—, said the powers of the soul too are in respect of this accession [or: addition] equal in number, and these they called intelligence and understanding and knowledge and opinion and sensation. (T₅)

§7 Democritus Epicurus (say) that the soul is bipartite, having the rational (part) established in the breast, and the irrational (part) diffused through the whole compound of the body. (P₃)

§8 But Democritus says that all things participate in a sort of soul, even dead bodies, because they patently continue to participate in something warm and perceptive, though most (of this) is expired out of them. (P₄,S₂)

4.5 What Is the Regent Part and in Which (Part of the Body) Is It Found (P,T)

§1 Plato Democritus (say it is) in the whole head. (P₁,T_{1b})

§2 Hippocrates (says it is) in the brain. (T_{1a})

§3 Strato (says it is) in the part of the forehead between the eyebrows. (P₂,T₂)

§4 Erasistratus (says it is) in the membrane enveloping the brain, which he calls *epikranis* ('on the skull'). (P₃,T₃)

§5 Herophilus (says it is) in the ventricle of the brain, which is also its *basis* ('base'). (P₄,T₄)

§6 Parmenides (says it is) in the whole chest; as also does Epicurus. (P₅,T₅)

§7 Aristotle (and) all the Stoics (say it is) in the whole heart, or in the *pneuma* about the heart. (P₆,T₆)

§8 Diogenes (says it is) in the arterial ventricle of the heart, which is pneumatic. (P₇,T₇)

§9 Empedocles (says it is) in the compound of the blood. (P₈,T₆)

§10 Some people (say it is) in the neck of the heart, (P₉)

§11 But others in the pericardium, (P₁₀,T₈)

§12 And yet others in the midriff. (P₁₁,T₉)

§13 Some of the later thinkers (say) that it extends from the head to the midriff. (P₁₂)

§14 Pythagoras (says that) the life-sustaining (part is) in the region of the heart, the rational and intelligent in the region of the head. (P₁₃)

4.6 On the Motion of Soul (P,S)

§1 Plato (says that) the soul is ever-moving, but that the mind is unmoved with regard to locomotion. (P₁,S₂)

§2 Aristotle (says that) the soul is unmoved because it is prior to all motion, but it does partake of accidental motion, just as do the shapes and boundaries and absolutely all the formal aspects that relate to bodies. (P₂,S₁)

4.7 On the Indestructibility of Soul (P,S)

§1 Pythagoras Anaxagoras Diogenes Plato Empedocles Xenocrates (say that) the soul is indestructible. (P_{1a},S₁,T₁)

§2 Heraclitus (says that) on departing from the body it returns to the Soul of the universe, i.e. to what is of the same kind. (P1b,T2)

§3 The Stoics (say that) on departing from the bodies it is not yet destroyed; the weaker (soul), that is, that of the uneducated, (is destroyed) together with the compounds; but the stronger, such as the one attributable to the wise, lasts right up to the total conflagration of the universe. (P2,T3)

§4 Epicurus Democritus Aristotle (say that) the soul is mortal, perishing together with the body. (P3,T4)

§5 Plato Pythagoras (say that) the rational part is indestructible; for though the soul is not a god, it is the product of the everlasting God; but the irrational part is destructible. (P4,T5)

4.7a On Intellect (S)

§1 Pythagoras Anaxagoras Plato Xenocrates Cleanthes (say that) the intellect enters from outside [sc. as a separate component]. (S1,T1)

§2 Parmenides and Empedocles and Democritus (say that) intellect and soul are the same thing. According to them no living being could be without reason in the true sense of the word. (S2)

4.8 On Sensation and Sense-Objects (P,S)

§1 The Stoics define sensation as follows: 'sensation is perception or cognition via a sensor (sense organ)'—'sensation' is spoken of in several senses, for it is a condition as well as a faculty and an activity—; and the cognitive impression occurs via a sensor in the regent part; moreover, sensors also denote the intellectual breaths, stretched from the regent part from which they arise to the organs. (P1,S1)

§2 Epicurus: 'sense/sensation is the (bodily) part which is the faculty, and the sensory recognition which is the activity'; so it is spoken of by him in two ways: sense as the faculty, sensory recognition as the activity. (P2,S2)

§3 Plato declares (that) sensation is the commonality of soul and body with regard to what is outside; for the faculty belongs to the soul, the organ to the body; together they are capable of apprehending what is outside via impression. (P3,S3)

§4 According to the Peripatetics (sensation occurs) in four ways: from which is the regent part, through which the organ, that is, sense-organ, according to which the activity, and because of which the sense-object. (S4)

§5 Leucippus and Democritus (say) that the sensations and the thought-processes are alterations of the body. (S5)

§6 Aristotle (says) that sensation is an alteration of the sensing (part of the soul), and a mean (between the extreme properties) (of the sense-object); the *sensus communis* is the judge of the compounded forms. Towards it all the simple (senses) each (on its own) contribute their particular (impressions); (the *sensus communis*) in which (is located) the changeover from one form to the other, such as of shape and movement of a body; (which is) in between the rational and the non-rational, partaking of memory and intellect, extending even toward the non-rational animals insofar as these possess a certain amount of what is analogous to understanding. Common to sight and touch are: form, to sight and hearing: distance, and to all: motion and size and number. (S6)

§7 (The) Stoics call this *sensus communis* 'inner touch', according to which we also perceive ourselves. (S7)

§8 The Stoics (say) that sensations are of bodies. (S11)

§9 The successors of the ancients (say that sensations are) of the incorporeal *logoi* about the bodies, which they at the same time call shapes. (S12)

§10 Leucippus Democritus Epicurus (say) that sensation and thought arise from images that approach from outside, for neither of these can occur to anyone without the image falling upon him. (P4, S13)

§11 Others (say that sensation and thought arise) through alteration of forms or shapes, or through imprinting in the soul; in any case through effluences rather than through images. (S14)

§12 The Stoics (say) that each sensation is an assent and a cognition. (S15)

§13 (The) Academics (say) that the sensations are neither cognitions nor assents. (S16)

§14 The Peripatetics (say) that the sensations are not without assent, but are themselves not assents. (S17)

4.9 Whether Sensations and Impressions Are True (P,S)

§1 Pythagoras Empedocles Xenophanes Parmenides Zeno Melissus Anaxagoras Democritus Metrodorus Protagoras Plato (say that) the sensations are false. (S1)

§2 The successors of the Academy (say) that (the sensations) are sound, because they believe that by means of them they grasp true impressions, though these are not precise. (S2)

§3 Aristotle (says) that sensation does not err with regard to its proper object, but (it does err) with regard to what is incidental. (S3)

§4 The Stoics (say) that the sensations are true, but that of the impressions some are true and some false. (P1,S4)

§5 Epicurus (says) that every sensation and every impression is true, but of the opinions some are true and some false; and the sensation gives us a false picture in one respect only, namely with regard to objects of thought; but the impression does so in two respects, for there is impression of both sense objects and objects of thought. (P2,S5)

§6 Parmenides Empedocles Anaxagoras Democritus Epicurus Heraclides (say) that the particular sensations of their particular object occur in accordance with the matching-sizes of the pores, each of the sense objects corresponding to each sense. (P3,S6)

§7 The Peripatetics (say that the particular sensations of their own objects come about) in relation to the faculties of the sense organs. (S7)

§8 The others say that sense objects exist by nature. (S8)

§9 But Leucippus Democritus Diogenes (say that they exist) by convention, that is because of our opinion and conditions; that nothing is real/true or cognitive apart from the primary elements, i.e. the atoms and the void; for only these exist by nature, and those things which derive from them, differing from each other in position and order and shape, are incidental. (S9)

§10 Those (who posit) the atoms and those (who posit) the *homoiomere* ('things with like parts') and those (who posit) the things without parts and those (who posit) the infinitesimals (say) that all sense objects are mixed in all (others), and that none of these (objects) exists in a pure state, and that they are called such or such in relation to what predominates and to the varieties of glittering. (S10)

§11 Pythagoras Plato (say) that each of the sense objects proceeding (to us) from each element is pure [i.e., unmixed]. The aetherial is attuned to sight, and the pneumatic to hearing, and the fiery to smell, and the wet to taste, and the earthy to touch. (S11)

§12 Epicurus (says) that the pleasures and pains actually belong with the sense objects. (S12)

§13 The Peripatetics (say) that they belong with the objects of thought; for the same things do not appear pleasant or painful to all people the way that white and black things do. (S13)

§14 Chrysippus (says) that the generic pleasant is an object of thought, but the individual and experienced is in fact a sense object. (S14)

§15 Empedocles (says) that the pleasures come about for what is similar from what is similar, but in accordance with what is lacking for the fulfilment, so that the desire for the similar comes about through what is lacking; the pains

come about through what is dissimilar, for foreign to each other is what is different as to composition and the blend of the elements. (S15)

§16 Anaxagoras (says) that each sensation occurs accompanied by stress. (S16)

§17 <The> others (say) that pleasure, or stress, are supervenient and do not come about together (with the sensation). (S17)

§18 The Stoics (say) the wise man can be grasped by sensation from his individual appearance by way of inference from a sign, (S18)

§19 the Academics (that he) is knowable by reason, (S19)

§20 Epicurus that the wise man (is knowable only) to (another) wise man. (S20)

4.10 How Many Senses Are There? (P,S)

§1 The Stoics (say) that there are five individual senses: sight hearing smell taste touch. (P1,S4)

§2 Aristotle does not speak of a sixth (sense), but (mentions) the *sensus communis*, (which is) the judge of the compounded forms, (the *sensus communis*) towards which all the simple (sensations) each assemble their particular impressions; (the *sensus communis*) in which the act of moving from one to the other, as with shape and motion (occurs). (P2,S5)

§3 †Pelles (says) that there are more (sc. than five) senses among the non-rational animals.† (S1)

§4 Democritus (says) that there are more (sc. than five) senses among the non-rational animals and among the wise and among the gods. (P3, S6)

§5 Democritus (says) that there are more senses than (kinds of) sense objects, but that this is hidden because the (number of the) sense objects fails to correspond with the greater number (of the senses). (S2)

§6 But the others say that (the senses are) equally balanced (in number to the sense objects). (S6)

4.11 How the Sensation and the Conception and the Reason [or: Speech] That Is Internally Placed Occurs (P)

§1 The Stoics say: when a man is born he has the regent part of his soul like a sheet of papyrus well-prepared for making a transcript. On this he transcribes for himself each single one of his conceptions.

[6] The first [or: primary] manner of registration is through the senses. Suppose it is of a white something; when it has gone away, they have a memory of it.

[8] But when many memories of the same sort have occurred, then we say that they have an experience. For an experience is nothing but the multitude of impressions of the same sort.

[10] Some of these conceptions arise naturally in the aforesaid ways, and without technical elaboration; others are in the end produced by our teaching and instruction. The latter are just called conceptions, the former also preconceptions.

[14] And [sc. interior] reason [or: speech], which entitles us to be called rational, is said to be completed from preconceptions at the age of seven years.

[16] A conception is an apparition (*phantasma*) in the thinking faculty of a rational animal; for the apparition is only then called a conception (*ennoëma*) when it occurs in a rational soul, deriving its name from the mind (*nous*).

[19] Accordingly, all the apparitions that occur to non-rational animals (are merely apparitions). But those that occur to the gods and to us are apparitions as to genus and conceptions as to species. Just as denarii and staters, if you consider them in themselves, are simply denarii and staters. But if you use them to pay for a boat trip they are not only called denarii, but a 'boat fare' as well. (P1)

4.12 In What Respect Impression, Impressor, Imagination, Figment Are Different (P,cf.S)

§1 Chrysippus says that these four are different from one another. An impression is an affection coming about in the soul, which within itself reveals also what produced it (i.e. its cause). Like when through sight we observe something white, the affection is what has come about in the soul through seeing; and it is (on account of) this affection that we are able to say that there is a white object that affects us. And similarly (when we are affected) through touch and smell.

[9] The word impression (*pha-ntasia*) derives from 'light' (*pha-os/phôs*); just as light reveals itself and all the other things that are embraced in it, so too the impression reveals itself and what produced it [i.e. its cause].

[12] An impressor is what causes [or: produces] the impression, like the white or the cold or whatever is capable of affecting the soul, this is an impressor.

[14] Imagination is an empty reflex, an affection in the soul that does not arise from any impressor, as when someone shadow-boxes or strikes his hand against thin air; for an impression has some impressor as its object, but the imagination has none.

[18] A figment is that to which we are attracted in an empty reflex of the imagination; it occurs in people who are melancholic and mad.

When the tragic hero Orestes says

Mother, I beg you, don't urge upon me
Those bloody-faced, snakelike maidens!
Here they come leaping toward me,

he says this because he is mad, and he sees nothing but only believes (that he does). That is why Electra also says to him

Poor man, keep still in your bed!
You don't actually see anything you think you see!

[28] Just as Theoclymenus in Homer. (P₁)

4.13 On Vision, How We See (P,S)

§1 Leucippus Democritus Epicurus believe that the visual sensation is the result of the penetration of images. (P₁,S₁)

§2 Timagoras, one of those who debased the Epicurean school on many issues, employs effluences instead of images. (S₂)

§3 Strato (says that) that colours travel from bodies and give their colour to the intermediate air. (S₃)

§4 Aristarchus (says that it is) shapes which (travel from bodies and) somehow give the air the same form as themselves. (S₄)

§5 Hipparchus (says that) rays stretching from each of the eyes deliver apprehension of external bodies to the visual faculty by fastening onto them with their extremities like the touch of hands. (P₃,S₅)

§6 Some ascribe this doxa to Pythagoras as well, since he is an authority for mathematics, and in addition to him to Parmenides who shows this through his verses. (S₆)

§7 Plato (says that we see) through co-illumination, the light from the eyes streaming out over a certain distance into the congeneric air, while the light travelling from bodies is borne in the contrary direction, and the light in the air in between, which (sc. air) is easily diffused and flexible, extends itself together with the fiery element of vision. This is called Platonic co-illumination. (P₄,S₇)

§8 Alcmaeon (says that we see) through the perception of the transparent. (S₈)

§9 Aristotle (says) that we see according to the movement of what is actually transparent. (S9)

§10 Some of the Academics (say that we see) through the effusion of certain (rays) that turn around again to the visual faculty after their contact with the underlying object. (S10)

§11 Posidonius calls it (sc. this manner of seeing) a natural fusion of light rays. (S11)

§12 Empedocles provides evidence both with regard to (the view that we see) through rays and with regard to (the view that we see) through images; but more in relation to the latter, for he accepts the effluences. (P2a,S12)

§13 Hestiaeus of Perinthos combined the rays with the images, calling the result by synthesis 'ray-image'. (P2b,S13)

4.14 On Reflections in Mirrors (P,S)

§1 Empedocles (says they come about) by the effluences that come together on the surface of the mirror and are compacted by the fiery stuff discharged from the mirror, which transports across with itself the air lying before it towards which the streams travel. (P1,S1)

§2 Leucippus Democritus Epicurus (say) the reflections in mirrors come about through the manifestations of the images, which move away from us but come to be on the mirror which sends them back. (P2,S2)

§3 The successors of Pythagoras and of the mathematicians* (say they come about) by backwards reflections of vision. For (they say that) the visual beam is carried along and extends towards the bronze (mirror), but turns back on itself when it encounters a dense and smooth object and is repulsed, undergoing something akin to one's stretching out a hand and then bending it back to the shoulder. (P3,S3)

§4 One can apply all these summary statements to the question of how we see. (P4,S4)

4.15 Whether Darkness Is Visible (P)

§1 Sphaerus the Stoic (says that) darkness is visible, since a sort of beam of light is poured into it from the visual faculty. And the visual faculty does not

* Here in contrast to elsewhere, e.g. in ch. 2.15, the term *μαθηματικός* should be translated 'mathematician' or perhaps 'scientist'.

err, for in very truth it is seen that there is darkness. Misty rays proceed from the organ of vision; darkness somehow compacts and compresses and dulls our sight, while light delates our sight and guides it through the (intervening) air that is in between towards the things that are seen. This is why we do not see in the dark but only darkness itself. (P1,S1+G2)

§2 Chrysippus (says) we see by the tension of the intervening air, when it is pierced by the visual *pneuma* that extends from the regent part to the pupil, and through projection towards the surrounding air stretches it (sc. the visual *pneuma*) in the shape of a cone, whenever the air is of the same kind as it. Fiery rays are poured forth from the visual faculty, not black and misty ones; which is why darkness is visible. (P2,S3)

4.16 On Hearing (P,S)

§1 Empedocles (says that) hearing occurs when *pneuma* falls against the cartilaginous body which he says is suspended inside the ear, and hangs and is struck in the manner of a 'bell'. (P1,S1)

§2 Alcmaeon (says) that we hear by means of the empty space which is inside the ear. For this is what reverberates when *pneuma* enters; for all hollow spaces reverberate. (P2,S2)

§3 Diogenes (says that we hear) when the air in the head is struck and moved by the sound. (P3,S3)

§4 Plato and his successors (say that) the air in the head receives a blow, and this (air) is reflected [i.e. bent back] onto the ruling parts, and so the perception of hearing arises. (P4,S4)

4.17 On Smelling (P,S)

§1 Alcmaeon (says that) the ruling part is in the brain; one then smells with this part when it draws in the odours through inhalation. (P1,S1)

§2 Empedocles (says that) the odour is introduced together with the inhalations of the lung. But when breathing becomes heavy, one no longer smells due to hoarseness, as happens in the case of those who have colds. (P2,S2)

4.18 On Tasting (P,S)

§1 Alcmaeon (says) the flavours are distinguished by the moisture and warmth in the tongue as well as by its softness. (P1)

§2 Diogenes (of Apollonia says that) through the porousness of the tongue and its softness, and because the veins from the body are connected to it the flavours are diffused and attracted to the perceptive faculty and [or: i.e.] the ruling part, as from a sponge. (P2)

4.19 On Voice (P,S)

§1 Plato defines voice/sound as a *pneuma* (breath) directed from the intellect through the mouth, and as a blow by air through ears and brain and blood as far as the soul. (P1a,S1a)

§2 The word 'voice' is used analogically of animals without reason and inanimate things, designating for example neighs and noises. (P1b,S1b)

§3 But in its proper sense it is articulate (voice), as it illuminates what is thought. (P1c,S1c)

§4 Epicurus (says) voice/sound is a stream sent out from things which speak, reverberate, or make noises. This stream is broken up into small particles of the same shape. Globular figures are called 'of the same shape' as globular figures, and irregular and triangular figures as figures of the same kind. When these fall upon the ears, the perception of voice results. This is clear from (a comparison with) the skins that let out (water) and the fullers who blow air into in garments. (P2)

§5 Democritus says that the air too is broken up into corpuscles of the same shape, and these roll along with the small particles of voice/sound, 'for jackdaw sits beside jackdaw' and 'God always brings like to like.' Thus on beaches the same pebbles are seen in the same spots, the round ones in one place and the long ones in another. Also in the case of people using sieves similarly shaped things gather together to the same place, so that beans and lentils are separate.—But one could say in response to those (who hold this opinion): how do a few particles of breath fill a theatre that seats tens of thousands of men? (P3)

§6 The Stoics say that the air is not composed of small particles but, having no empty space, is wholly continuous. Whenever it is struck by breath, it undulates endlessly in concentric circles until it fills the surrounding air, as when a diving-pool is struck by a stone. However, the diving-pool moves in circles whereas the air moves in spheres. (P4)

§7 Anaxagoras (says) voice/sound occurs when breath encounters solid air and, reverberating because of the impact, is carried to the ears; in this manner the so-called echo also occurs. (P5)

4.20 Whether Voice Is Incorporeal and How Echo Occurs (P,S)

§1 Pythagoras Plato Aristotle (say voice/sound is) incorporeal. For not the air but the shape around the air and its surface becomes voice/sound through a certain sort of striking. Every surface is incorporeal, for it moves together with the bodies, though it itself remains wholly incorporeal, just as when a cane is bent the surface is not affected, but it is the matter that is bent. (P1)

§2 The Stoics say voice/sound is body. For everything that acts and causes is corporeal and the voice/sound causes and acts. For we hear it and perceive it hitting our hearing and moulding it like a ring (pressed) into wax. Moreover, everything that moves [sc. something else] and distresses is body, and good music moves us while bad music distresses us. Again, everything that is moved is body; the voice is moved and when encountering smooth places reverberates, like a ball thrown against a wall. Indeed in the pyramids in Egypt a single voice/sound released inside produces four to five echoes. (P2)

4.21 How the Soul Comes To Be Sentient and What Is Its Regent Part (P,S)

§1 The Stoics say that the soul's highest part is its regent part, that which causes impressions, agreements, sensations and impulses, and this they call the power of reasoning. The soul has seven [sc. further] parts, which grow from the ruling part and stretch out towards the body like tentacles from an octopus. Of the seven parts of the soul five are sense organs: sight, hearing, smell, taste, and touch;

[9] of these sight is *pneuma* extending from the ruling part to the eyes, hearing *pneuma* extending from the ruling part to the ears, smell *pneuma* extending from the ruling part to the nostrils, taste *pneuma* extending from the ruling part to the tongue, and touch *pneuma* extending from the ruling part to the (body's) surface for sensitive touching of things which encounter it.

[15] Of the remaining parts one is called seminal, which is itself also *pneuma* stretching from the ruling part to the testicles; the other, called the 'vocal' (part) by Zeno and which they also call speaking (part), is *pneuma* stretching from the ruling part to the trachea and tongue and its appropriate organs.

[20] The ruling part itself, just as (the god in the spherical) heaven, dwells in our spherical head. (P1)

4.22 On Respiration (P,S)

§1 Empedocles (says that) the first breath of the first living being took place as the moisture that is in newborns was excreted and the outside air entered into the (slightly) opened vessels to fill the void. Right after this, as the innate heat squeezed up the air from below by rushing to the outside, the exhalation (took place), and its corresponding returning inside provided a complementary entrance to the air, the inhalation. As for the breathing that prevails now, when the blood moves towards the surface and forces the air up through the nostrils by its influxes, the exhalation occurs through the departure of the air, and when (the blood) runs back and the air enters in turn into the gaps left by it, the inhalation. He illustrates this in the passage with the example of the clepsydra ('water clock'). (P1)

§2 Asclepiades constructs the lung in the manner of a funnel. He supposes that the cause of respiration is the filter in the chest, towards which air flows in from outside, and which is cleaned because it is thick. It is pushed back again when the chest is unable to receive more or to sustain it. A small amount of fineness always remains in the chest (for it is not all excreted) and it is towards this, which remains inside, that (the) weighty mass from outside is brought back in again. He likens the process to what happens with cupping-glasses. Voluntary respiration he says takes place when the finest pores in the lung are contracted and the bronchial passages narrowed. For these obey our will. (P2)

§3 Herophilus admits motor capacities for bodies in the nerves, arteries and muscles. He thus thinks that only the lung has a natural tendency for dilation and contraction, and the other parts (have this tendency) as a consequence. The drawing in of *pneuma* from outside, he says, is accordingly the activity of the lung, and it draws it in through the filling process, which occurs from without. Next, because of a second (natural) tendency, the thorax diverts the breath to itself, and when it is full and can no longer draw it in, it lets the excess flow back again into the lung, through which what is excreted passes outwards. The parts of the body are thus affected inversely to one another [i.e. one accepts air as the other emits it]. For now a dilation, (then a contraction) of the lung occurs, since filling up and emptying occur through reciprocal exchange, so that there are in fact four movements that occur in the lung: the first is the one by which it accepts air from outside, the second that by which the *pneuma*, which it has received from outside, changes its flow internally towards the thorax; the third that by which it receives again into itself the contracted *pneuma* from the thorax, the fourth the one by which it evacuates to the outside that which is in it after the turn-around. Of these motions, he says, two are dilations, one from the outside and one from the thorax, and two contractions,

namely one when the thorax draws the pneumatic substance to itself, the other when the lung itself excretes (*pneuma*) into the external air. Only two motions, you see, occur in the thorax: dilation when it draws in (*pneuma*) from the lung, contraction when it delivers it back again to the lung. (P₃)

4.23 On Bodily Affections and Whether the Soul Experiences Pain along with These (P,S)

§1 The Stoics (say that) the affections (are) in the places that have been affected, but the sensations (of them) are in the ruling part. (P₁)

§2 Epicurus (says that) both the affections and the sensations are in the places that have been affected, for the ruling part is free from affection. (P₂)

§3 Strato (says that) both the affections and the sensations exist together in the ruling part, not in the affected places. For in this place steadfastness is situated, just as in the case of terrible and painful circumstances, and just as in the case of brave and cowardly actions. (P₃)

Book 5 Physiology

AËTIUS
ON THE VIEWS (OF THE PHILOSOPHERS)

BOOK 5

in which the following chapter headings (are found):

1. On divination
2. How dreams occur
3. What the substance of the semen is
4. Whether the semen is a body
5. Whether females too release semen
6. How the conceptions occur
7. How males and females are engendered
8. How monstrosities occur
9. Why a woman, although frequently having intercourse, does not conceive
10. How twins and triplets occur
11. Where resemblances to parents or ancestors come from
12. How it occurs that those who are born resemble others and not their parents
13. How it happens that women are infertile and men without offspring
14. Why female mules are infertile
15. Whether the embryo is a living being
16. How embryos are nourished
17. What is fully formed first in the womb
18. Why seven-month babies are viable
19. On the birth of living beings, how they were born as living beings and whether they are perishable
20. How many kinds of living beings there are and whether they all possess sense-perception and reason
21. In what length of time living beings are formed when they are in the womb
22. Out of what elements each of the generic parts in us consists
23. When and how a human being commences maturity
24. How sleep and death occur
25. Whether sleep and death pertain to the soul or the body
26. How plants grew and whether they are living beings
27. On nourishment and growth
28. From where the appetites arise in living beings, and also pleasures

- 29. How fever occurs and whether it is an after-symptom
- 30. On health and disease and old age

5.1 On Divination (P)

§1 Plato and the Stoics admit divination in that it is sent by a god, which is its visionary (i.e. prophetic) element, and also because of the divinity of the soul, which is the element of divine possession; they also admit the interpretation of dreams, the divination of the stars, the inspection of birds and the inspection of sacrificial victims. These (latter thinkers [i.e. Stoics]) include the most parts of divination. (P₁)

§2 Xenophanes and Epicurus reject divination. (P₂)

§3 But Pythagoras excludes only the sacrificial aspect (as part of divination). (P₃)

§4 Aristotle and Dicaearchus introduce only the aspect of divine possession and dreams (as parts of divination), not regarding the soul as immortal, but as sharing in something of the divine. (P₄)

5.2 How Dreams Occur (P)

§1 Democritus (says that) dreams occur through the manifestations of *eidola* (images). (P₁)

§2 Strato (says that they occur) by an irrational nature in the mind when during sleep it somehow becomes more sensitive, and through this very fact is affected by the cognitive element. (P₂)

§3 Herophilus (says that) of the (various kinds of) dreams those that are divinely inspired occur of necessity, whereas those that are natural occur when the soul forms an image of what is advantageous for itself and will subsequently happen, but those that are mixed occur spontaneously through the impact of images, whenever we see what we wish, as occurs in the case of those who see their lovers while sleeping. (P₃)

5.3 What Is the Substance of the Semen (P)

§1 Aristotle: semen is that which is able within itself to move to the production of such a thing as that from which it was itself secreted. (P₁)

§2 Pythagoras (says that) the semen is foam from the most useful (kind of) blood, a residue of food, like blood and marrow. (P₂)

§3 Alcmaeon (says that it is) a part of the brain. (P₃)

§4 Plato (says that it is) an effluence from the marrow in the backbone. (P₄)

§5 Epicurus (says that it is) a fragment of soul and body. (P₅)

§6 Democritus (says that) it comes from the bodies in their entirety and their most important parts, such as bones, tissues and sinews. (P₆)

5.4 Whether the Semen Is a Body (P)

§1 Leucippus and Zeno (say that it is) a body, for (they say) it is a fragment of soul. (P₁)

§2 Pythagoras Plato Aristotle (say that) the power of the semen is incorporeal just like the mind that sets it in motion, but that the matter that is ejaculated is corporeal. (P₂)

§3 Strato and Democritus (say that) the power (of the semen) is a body as well, for it is pneumatic. (P₃)

5.5 Whether Females Too Release Semen (P)

§1 Pythagoras and Epicurus and Democritus (say that) the female releases semen as well (as the male), for she has concealed testicles. For this reason she too has desire for sexual intercourse. (P₁)

§2 Aristotle and Zeno (say that) she releases moist matter just like sweat from doing exercise, but not semen that results from concoction. (P₂)

§3 Hippo (says that) females release semen no less than males. However, (he says), this (semen) does not contribute to conception of life because it falls outside the womb. Hence some females often release seed apart from males, and it is especially widows who do this. (P_{3a})

§4 *** and the bones derive from the male but the flesh from the female. (P_{3b})

5.6 How the Conceptions Occur (P,cf.S)

§1 Aristotle (says that) the conceptions occur when the womb has been drawn forward through the (process of) purification [i.e. menstruation], and the men-

* On the translation of multiple name-labels see the User's guide to the translation.

ses have brought along from the entire mass (of the body) a part consisting of pure blood, which the male seed (then) encounters. But (he says that) pregnancies fail to occur from the lack of purification of the womb [i.e. cessation of menstruation] or its inflation or fear or pain or through weakness of the women or through lack of condition of the men. (P1)

5.7 How Males and Females Are Engendered* (P,cf.S)

§1 Empedocles (says that) males and females come into being in relation to heat and cold. Hence it is recounted that the first males were born from the earth more in the east and the south, whereas the (first) females were born in the north. (P1)

§2 Parmenides (has it) the other way around: the males grew in the north, for they share more in the dense element, the females in the south on account of their lightness. (P2)

§3 Hippo (says that males and females are engendered) from the compacted and strong seed (or) from the fluid and weaker seed. (P3)

§4 Anaxagoras Parmenides (say that males are engendered) when the seed from the right parts [i.e. testicle] is deposited on the right side of the womb and the seed from the left parts is deposited on the left side; but if the deposition is reversed, (then) females come into being. (P4)

§5 Leophanes, who is mentioned by Aristotle, (says that) males (are engendered with seed) from the right testicle, females (with seed) from the left testicle. (P5)

§6 Leucippus (says that males and females are engendered) through the differentiation of the parts, in accordance with which the male has a penis and the female has a womb. This is all that he says (on the subject). (P6)

§7 Democritus (says that) the parts (held by males and females) in common derive from either (kind) as it happens, but the parts that are specific (to the two sexes) through dominance. (P7)

§8 Hippo (says that) if the seed dominates, a male (is engendered), if the womb dominates, a female (is engendered). (P8)

* We translate *γεννᾶται* in the chapter heading with 'is engendered' since in English this verb can be used for both sexes, in contrast to 'beget' and 'conceive'. In the text the verb is used only in the chapter heading (but understood in other lemmata). In §§1&4 the verb is *γίνεσθαι*, translated 'come into being'.

5.8 How Monstrous Births Occur (P,cf.S)

§1 Empedocles (says that) monstrous births occur from excess of semen or from lack (of semen) or from the disturbance of movement (of the semen) or from the division into more (parts) or from the inclining away (of the womb). In this way he plainly anticipates almost all the causes (that can be given). (P₁)

§2 Strato (says that they occur) from addition (to the semen) or subtraction (from the semen) or transposition or inflation (of the womb). (P₂)

§3 Some of the doctors (say that they occur) from the womb twisting sometimes when it is inflated. (P₃)

5.9 Why a Woman, Although Frequently Having Intercourse, Does Not Conceive (P,cf.S)

§1 Diocles the doctor (says that it occurs) because some women do not release any semen at all or less than is required, or because the semen is such that it is not productive of life, or through a lack of heating or cooling or moistening or dryness or through paralysis of the (bodily) parts. (P₁)

§2 But the Stoics (say that it occurs) through a slanting of the penis, which is unable to project the seed in a straight line, or from the disproportion of the parts (i.e. testicles) in relation to the distance of the womb. (P₂)

§3 Erasistratus (says that it occurs) because of the womb, whenever it has tumors or fleshy growths or is feebler or smaller than what is natural. (P₃)

5.10 How Twins and Triplets Occur (P,S)

§1 Empedocles thinks that twins and triplets occur as the result of multiplication and division of the semen. (P₁)

§2 Asclepiades (says that they occur) from the difference of the semen, as in the case of barley with double and triple stalks. For (he says) there are highly productive kinds of semen. (P₂)

§3 Erasistratus (says that they occur) through superfetations, as occurs in the case of the irrational animals. For (he says) that whenever the womb is in a state of having been purified, then it admits superfetation. (P₃)

§4 The Stoics (say that they occur) on account of the locations in the womb; for whenever semen settles in a first and a second (location), then (they say) additional conceptions occur and [or: i.e.] twins and triplets. (P₄)

5.11 Where Does Resemblance to Parents and Ancestors Comes from (P,cf.S)

§1 Empedocles (says that) similarity occurs in accordance with dominance of the seminal seeds, but that dissimilarity (occurs) when the heat in the semen has vaporised. (P₁)

§2 Parmenides (says that), whenever the seed is separated out from the right part of the womb, (resemblance) to the fathers (occurs), but whenever this happens from the left (part), (resemblance) to the mothers (occurs). (P₂)

§3 The Stoics (say that) the semen is conveyed from the entire body and the soul, and that the *homoiomereiai* ('things with like parts') form the outlines and the markings from the same kinds, as when a painter (forms) an image of what is seen from similar colours. But (they say that) the woman too releases semen; and if the semen of the woman dominates, the child that is born is similar to the mother, but if the semen of the man (dominates), (it is similar) to the father. (P₃)

5.12 How It Occurs That Those Who Are Born Resemble Others and Not Their Parents (P,cf.S)

§1 The majority of the doctors (say that it occurs) by chance and spontaneously, whenever the seed—both that of the man and that of the woman—has become chilled, that the (resultant) children become dissimilar (to their parents). (P₁)

§2 Empedocles (says that) the babies are shaped by the imagination of the woman during conception. For often women fell in love with statues and images, and they gave birth to children who resemble these. (P₂)

§3 The Stoics (say that) the similarities to others occur by co-affection of the mind in accordance with penetrations of streams and rays (or indeed) of *eidola*. (P₃)

5.13 How It Occurs That Women Are Infertile and Men without Offspring (P,cf.S)

§1 The doctors (say that) infertility occurs in women because of the womb, either from it being denser or lighter or rougher or from (having formed) cal-luses or fleshy growths, or from being small in size or from lack of nourishment or from being in poor condition or from its shape being twisted or through dis-tension. (P₁)

§2 Diocles (says that) men do not have offspring from the fact that some of them do not emit seed at all or less than is required, or from the infertility of their seed or from the paralysis of the organs or from the slanting of the penis, which is unable to offer the seed straight passage, or from the disproportion of the (bodily) parts in relation to the distance of the womb. (P2)

§3 The Stoics determine as cause the incompatibility of the powers and qualities of each of the partners with each other; when it happens that they (sc. women) have been separated from their partner and joined up with others (sc. men) with whom they are compatible, (then) the natural process has prevailed and a fetus is brought to completion. (P3)

5.14 Why Female Mules Are Infertile (P,cf.S)

§1 Alcmaeon (says that) of the mules the males are infertile because of the thinness of the 'sperm' (*thore*), i.e. of the semen, and its coldness. In the case of the females it is from the wombs not 'gaping wide' (*anachaskein*), which means opening up their entrance. For this is how he himself has spoken of it. (P1)

§2 Empedocles (says that it occurs) through the small size and low position and narrowness of the womb, which has reversed and grown next to the belly, with the result that neither does the seed have a direct passage to it, nor, even if it were to reach it, does the womb accept it. (P2)

§3 But Diocles bears witness to him [i.e. the view of Empedocles] when he says: 'in the dissections we have often observed the womb of mules like this'; and (he adds that) it is possible that women too are infertile for reasons of such a kind. (P3)

5.15 Whether the Embryo Is a Living Being (P,S)

§1 Plato (says that) the embryo is a living being. For (he says) it both moves in the womb and is nourished and grows. (P1)

§2 The Stoics (say that) it is a part of the womb, not a living being. For (they say) just as fruits are parts of plants and when they have ripened they fall off, so the same happens with the embryo. (P2)

§3 Empedocles (says that) the embryo is not a living being but exists without breathing in the womb. The living being's first breath occurs (he says) at the time of the birth, when the moisture in the new-born babies* is excreted

* βρέφος in Greek can mean both 'fetus' and 'new-born baby'

and in the space (thus) vacated entry of the external air occurs in the vessels that have opened up. (P₃)

§4 Diogenes (says that) that the new-born babies are conceived without life, but do possess heat. For this reason, when the new-born baby is delivered, the innate heat draws the cold into the lung. (P₄)

§5 Herophilus grants the fetuses natural movement, but not movement that is pneumatic. The tendons are the causes of (their) movement. They become living beings at the moment when they are delivered and take in some of the air. (P₅)

5.16 How Embryos Are Nourished (P,cf.S)

§1 Democritus and Epicurus (say that) the embryo is nourished in the womb through the mouth. For this reason as soon as it is born it moves with its mouth to the breast. For (they say) in the womb too there are nipples and mouths through which it is fed. (P₁)

§2 The Stoics (say that the embryo is nourished) through the placenta and the navel. For this reason the midwives immediately bind it up and open up the (baby's) mouth, so that another method of nourishment may occur. (P₂)

§3 Alcmaeon (says that the embryo) is nourished from the body in its entirety. For (he says) it takes up the nourishing elements from the food, just like a sponge does. (P₃)

5.17 What Is Fully Formed First in the Womb (P,S)

§1 The Stoics (say that) it occurs all together as a whole. (P₁)

§2 Aristotle (says that) the loins (are) first (formed) like the keel of a ship. (P₂)

§3 Alcmaeon (says that) the head (is first formed), in which the ruling part resides. (P₃)

§4 The doctors (say that) the heart (is first formed), in which the veins and the arteries (have their source). (P₄)

§5 But others (say that) the large toe of the foot (is first formed). (P₅)

§6 And yet others (say that) the navel (is first formed). (P₆)

5.18 Why Are Seven-Month Babies Viable (P,S)

§1 Empedocles (says that) when the human race was first generated from the earth, because of the slow movement of the sun the day was the same in length of time as ten months now. As time advanced, the day became the same in length as seven months now. For this reason both ten-month and seven-month-olds are viable, the nature of the cosmos having ensured that the baby will grow to maturity (in the womb) in a single day and night of that time. (P1)

§2 Timaeus says that some twelve-month-olds too are conceived beyond the cessation of the menstrual periods that occurred before the conception. And seven-month-olds may be considered in the same way, not really (in fact) being seven-month-olds. For even after the conception a number of purgings take place. (P2)

§3 Polybus Diocles the Empiricists say that the eighth-month-old can be viable too, but is less viable somehow on account of many of them perishing through their poor condition. In general terms, (he says,) no one wishes to rear the eight-month-olds, but (nevertheless) many eight-month-olds have become full-grown men. (P3)

§4 Aristotle and Hippocrates and their followers say that, if the womb reaches its full term in seven months, then those (babies) that emerge and are born are viable. But if it (the baby) emerges but is not nourished, because the umbilical cord had grown weak on account of its secretion having become difficult, then as embryo it is malnourished. But if it remains the (full) nine months in the womb, then it emerges as a complete being. (P4,S1)

§5 Polybus (says that) that one hundred and eighty two and a half days are required for embryos to be viable. This is a six-month period, (he says) because the sun too moves from solstice to solstice in this length of time. But they are called seven-month-olds through the addition of the remaining days of this month to make up the seven. The eight-month-olds do not live, since the baby emerges from the womb but the umbilical cord is excessively strained. It (the baby) is not nourished, since the umbilical cord is the cause of its nourishment. (P5)

§6 But the astronomers* [i.e. astrologers] (say that) eight month periods are incompatible with all generation, but seven months are compatible. The incompatible zodiacal signs occur if they obtain [i.e. result in] predominant heavenly bodies [sc. that are malevolent]. For if any of these should allot the life and span (of any persons), they signify that they [i.e. those persons] will be

* On the term *μαθηματικός* see the notes to chs. 2.15 and 4.14. Here the context points to 'astronomers', as in Book 2.

unfortunate and untimely. The incompatible zodiacal signs are numbered by eight, i.e. Aries is incompatible with Scorpio, Taurus is incompatible with Sagittarius, Gemini with Capricorn, Cancer with Aquarius, Leo with Pisces, Virgo with Aries. For this reason (they say) both the seven-month and the ten-month-olds are viable, but the eight-month-olds perish because of their incompatibility with the cosmos. (P6)

5.19 On the Birth of Living Beings, How They Were Born as Living Beings and Whether They Are Perishable (P,cf.S)

§1 According to those thinkers (who say that) the cosmos is generated, living beings are generated and perishable. (P1)

§2 (But) according to those who (say that) the cosmos is ungenerated, the living beings are born as the result of change from each other. For (they say that) these are parts of the cosmos. (P2)

§3 As both Anaxagoras and Euripides (have said):

None of those things which come into being ever dies,
but the one distinguished in relation to the other
revealed different forms. (P3)

§4 Anaximander (says that) the first living beings were born in the moist substance and were covered with spiky bark. But as they got older (he says), they moved away to the drier part and, when the bark had broken up, they lived a different life for a short time. (P4)

§5 Democritus and Epicurus (say that) the living beings have come into being in a composition of (elements) lacking in form when the moisture first gave birth to life. (P^GQ₅)

§6 Empedocles (says that) the first generations of the living beings and plants certainly did not occur in their complete form, but they were disjointed with their parts not grown together. The second generations, which did have parts grown together, were like dream-images, while the third generations did consist of beings that had grown as wholes. The fourth generations were no longer (generated directly) from the elements such as earth and water but now from each other, in the one case [e.g. plants] when their nourishment became solid, in another case [i.e. human beings] when the shapeliness of the women caused the seminal movement to be stimulated. The species of all the living beings were separated out according to the various kinds of mixture, the more moist ones having an impulse towards the water, others flying up to the air,

namely those in which the fiery element predominates, while the heavier ones (went) to the earth, but those with a more balanced mixture were in harmony with all the (different) environments. (P6)

5.20 How Many Kinds of Living Beings There Are and Whether They All Possess Sense-Perception and Reason (P,S)

§1 Plato and Aristotle (say that there are) four kinds of living beings: those living on land and in the water, those that fly (in the air) and those that inhabit the heavens. In addition the heavenly bodies and the cosmos are stated to be living beings, and also the god, a living being who is endowed with reason and is immortal. (P₁,S₁)

§2 Democritus and Epicurus (do not include) the heavenly beings (as living beings). (P₂)

§3 Anaxagoras (says that) all the living beings possess the active *logos*, but their equivalent of the intellect does not have the *logos* that gives utterance (*prophorikos*), the so-called interpreter of the intellect. (P₃)

§4 Pythagoras Plato (say that) the souls of the so-called irrational living beings are rational too, but that they do not exercise reason on account of the poor mixture of their bodies and because they do not have the ability to speak, as (we see) in the case of monkeys and dogs; for these think but do not speak. (P₄)

§5 Diogenes (says that) they (sc. irrational living beings) share in the intelligible and air, but because some do so with a dense nature and others with a surfeit of moisture they neither think nor perceive (properly), but their condition resembles those (human beings) who are deranged because their ruling part has stumbled. (P₅)

5.21 In What Length of Time Are the Living Beings Formed When They Are in the Womb (P,cf.S)

§1 Empedocles (says that) in the case of human beings the articulation (of the parts in the womb) begins from the thirty-sixth (day) and is completed for the constituent parts from the forty-ninth day. (P₁)

§2 Asclepiades (says that) in the case of males because of their greater heat the articulation occurs from the twenty-sixth day, and quite often even earlier within (that period), and that for the constituent parts it is fulfilled within the fiftieth day. But in the case of the females they are articulated in a two month

period and are not completed till the fourth month because of a lack of heat. As for the irrational living beings, however, they become complete depending on the mixtures of the elements. (P₂)

5.22 Out of What Elements Does Each of the Generic Parts in Us Consist (P)

§1 Empedocles (says that) the fleshy parts are generated from the four elements in an equal mixture, but the sinews (are generated) from fire and earth with a double amount of water mixed in. The nails that living beings have are generated when the sinews insofar as they meet up with the air are cooled all around. The bones (are generated) from two parts of water, the same parts of earth and four parts of fire when these are mixed together (within the earth). Perspiration and tears occur when the blood melts and flows more easily from being thinned. (P₁)

5.23 When and How a Human Being Commences Maturity (P)

§1 Heraclitus and the Stoics (say that) human beings commence their maturity around the second hebdomad [i.e. period of seven years], at the time that the seminal fluid starts to move. Trees by way of comparison attain maturity at the time that they begin to produce their seeds, whereas the immature ones are without both blooms and fruits. (P₁)

§2 But Aristotle (says that human beings commence maturity) at the first hebdomad, at the time that understanding of things both good and disgraceful originates and there is a beginning of instruction (on such things). (P₂)

§3 Other thinkers, however, (say that) we become mature in the third hebdomad, when we develop beards and are at full strength. (P_{G3})

5.24 How Sleep and Death Occur (P,S)

§1 Alcmaeon says that sleep occurs by withdrawal of the blood to the veins that flow with blood, while waking up is the pouring forth (of the blood back again); but the complete withdrawal (of the blood) is death. (P₁)

§2 Empedocles (says that) sleep occurs through a commensurate cooling of the heat in the blood, but if the cooling is incommensurate and total, it (sc. sleep) announces (the occurrence of) death. (P₂)

§3 Diogenes (says that), if the blood expands, it completely fills the veins and pushes the air contained in them to the breast and the stomach lying beneath it, (then) sleep will have occurred and the chest is quite warm; but if all that is airy departs from the veins, (then) this is when death takes place. (P3)

§4 Strato the Stoics (say that) sleep occurs by the remission of the sensory spirit, not through a slackening, as in the case of (drunkenness), but when it is borne along to the regent part (or) what is in between the eyebrows. But when there is a total relaxation of the sensory spirit, then death has occurred. (P4)

5.25 Whether Sleep and Death Pertain to the Soul or the Body (P,S)

§1 Aristotle (says that) sleep is common to body and soul. Its cause is the moist exhalation (that rises) from the chest to the regions in the head from the nourishment located below, or the heat in the heart that has been chilled. But death (he says) is complete chilling. Death, however, is of the body only, not of the soul, for of this (latter) death does not exist. (P1)

§2 Anaxagoras (says that) sleep occurs through tiredness resulting from bodily activity, for the affection is somatic and not psychic. But of the soul too there is death, namely its separation (from the body). (P2)

§3 Leucippus (says that sleep) occurs not only through tiredness of the body, but (also) by a secretion of the light-particled (substance) that is greater than the influx of the psychic heat, and that the excess (of this secretion) is the cause of death. These are affections of the body and not of the soul. (P3)

§4 Empedocles (says that) death has occurred (as) the separation of (the earthly and the watery and airy and) the fiery (elements), out of which the human composition has been established. So in accordance with this (he says) death is common to body and soul. But sleep occurs (as) separation of the fiery (element only). (P4)

5.26 How Plants Grew and Whether They Are Living Beings (i.e. Animals) (P,S)

§1 Plato Thales (say that) plants too are living beings with a soul. This is evident from the fact that they move to and fro and hold their branches extended, and also that they yield when they are gathered together and then powerfully loosen again, so that they even pull up weights. (P1,S1)

§2 Aristotle (says that) they have souls, but are not in fact living beings [i.e. animals]. For (he says) living beings have impulses and sense-perception, and some are also endowed with reason. (P2,S2)

§3 But the Stoics and Epicureans (say that) they do not have souls. For (they say that) some (living beings share in) the impulsive and desiderative soul, and some also in the rational soul. But the plants move spontaneously somehow in a way not involving soul. (P3)

§4 Empedocles says that the plants, as first of the living beings, sprung up from the earth, before the sun(light) was spread around and before day and night had been separated. Because of the commensurability of their mixture (he says) they contained the structure of the male and the female (within themselves). They grow from the heat that has been separated out in the earth, so that they are parts of the earth, just like embryos in the belly too are parts of the womb. The fruits are superfluities of the water and the fire in the plants. Some have a lack of moisture, and after it has evaporated in the summer, lose their leaves, while others that have more (moisture) remain as they are and continue to be in bloom with leaves, as is the case for the laurel, the olive and the palm. But the differences in flavours (result from) the variation of the particles (of earth) and of the plants, which draw varieties (of flavours) from the *homoiomereiai* ('things with like parts') of that which nourishes them, as in the case of vines. For it is not the differences in the vines that make serviceable wine, but differences in the terrain that nourishes them. (P4)

5.27 On Nourishment and Growth (P,S)

§1 Empedocles (says that) the living beings are nourished by the settling down of the moisture and they grow through the presence of heat, whereas they diminish and perish through the failure of each of these. But the present-day human beings, compared to those who were first, have the status of infants. (P1)

§2 Anaxagoras (says that) *the living beings are nourished through the moisture which each of them supplies to their organs through digestion and in the (process of) nutrition. They grow when much nutrition reaches them, but they become weak and sickly when there is much in them which decomposes.* (P^BQ₂)

5.28 From Where the Appetites Arise In Living Beings, and Also Pleasures (P,S)

§1 Empedocles (says that) the appetites occur in the living beings in accordance with the deficiencies of the elements required to complete each of them, but that pleasures occur from moisture through the motions involving increase of things that are similar in kind, whereas annoyances occur through the combinations and mixtures of things that are opposite (in kind). (P1)

§2 Parmenides Empedocles declare that the appetite arises from a deficiency of food. (S1)

5.29 On How Fever Occurs and Whether It Is an After-Symptom (P)

§1 Erasistratus defines fever as follows: fever is a motion that occurs involuntarily when blood is diverted into the vessels of the *pneuma*. For just as in the case of the sea it is at rest when nothing stirs it, but when a violent wind blows contrary to what naturally occurs, it is then all churned up, in the same way in the body too, when the blood has been moved, it then plunges into the vessels of the *pneuma*, heats up the entire body and makes it enflamed. He is also of the view that fever is an after-symptom, *for it occurs as the result of a swelling, which appears in the vessels of the pneuma together with the nourishment which flows into them.* (P^{BQ1})

§2 Diocles says: the appearances are the sight of what is unclear. The appearances in which fever is seen to occur as an after-symptom are wounds, boils and swollen glands. *Consequently one must unconditionally state that the fever arises from some thing (i.e. cause) or other, even if these are concealed, namely from a swelling or a (form of) nourishment or another hot body.* (P^{BQ2})

§3 Herophilus refuted this (view) and believed that the hot swelling does not precede the fever, but the fever precedes. *This is how fever usually arises. Frequently it arises without a cause for it being apparent. Its cause triggers the movements of chronic (?) diseases and the growth of enflamed boils.* (P^{Q3})

5.30 On Health and Disease and Old Age (P,S)

§1 Alcmaeon (says that) the sustaining (cause) of health is the equilibrium of the powers, (namely) the wet, dry, cold, hot, bitter, sweet, and the rest; but predominance among these is productive of disease, for predominance of either (opposite) produces destruction. (P1a,S4)

§2 Herophilus (says that) diseases occur when the agent cause is an excess of heat or cold, the material cause is an abundance or lack of food, and the location where it takes place is the blood or the marrow or the brain. It can also happen through the agency of external causes, such as the (bad) quality of water, or locality or stresses or necessity or factors similar to these. But health (occurs as the) balanced mixture of qualities. (P1b,S1)

§3 Diocles (says that) most diseases occur through a variability of the elements in the body and of the constitution of the air. (P2,S2)

§4 Erasistratus (says that) diseases (occur) through an abundance of food, and through indigestion and corruption (of food), but health is a well-ordered regimen and sufficiency (of food). (P3,S3)

§5 Parmenides (says that) old age occurs from the deficiency of heat. (S5)

§6 The Stoics and the doctors are in agreement that old age has occurred on account of the insufficiency of heat; for those who have a greater amount of heat live to a more advanced old age. (P4)

§7 Asclepiades says that Ethiopians become old quickly at the age of thirty years because their bodies are overheated when they are burnt by the sun. In Britain people live to the age of one hundred and twenty through their localities being chilled and the protection of the fiery element in themselves. The bodies of Ethiopians are in fact thinner because they are distended by the sun, whereas those of the dwellers in the northern regions are stockier, and so for this reason they also live longer. (P5)

List of Chapter Headings in the Translation of Qusṭā ibn Lūqā

The oldest of the three mss. of Q used by Daiber in his edition, Zāhiriya (Damas-
cus) 4871, dated to 1161 CE, contains a translation of the indices of the five
books. Unlike in the Greek mss. all the headings have been assembled together
in a single list and are not distributed at the beginning of the individual books.
Daiber did not include this initial list in his edition and translation of Q, but
he has kindly provided the editors with a translation, which we print in this
Appendix.

Dies ist das Buch des Plutarchos über die naturwissenschaftlichen Ansichten,
welche die Philosophen vertraten. Es sind fünf Abhandlungen.

Die erste Abhandlung. 30 Kapitel.

1. Was ist die Natur?
2. Was ist der Unterschied zwischen dem Prinzip und dem Element?
3. Über die Prinzipien und was sie sind?
4. Wie entstand die Festigkeit der Welt?
5. Ist das Ganze eins?
6. Wie tritt in die Gedanken der Menschen (das Bewusstsein um) die Exis-
tenz Gottes?
7. Was ist die Gottheit?
8. Über die hohen Kräfte, welche die Griechen „Daimones“ und „Heroes“
nennen.
9. Über die Materie.
10. Über die Form.
11. Über die Ursachen.
12. Über die Körper.
13. Über die kleinsten Dinge.
14. Über die Gestalten.
15. Über die Farben.
16. Über die Teilung der Körper.
17. Über die Zusammenballung und die Mischung.
18. Über den leeren Raum.
19. Über den Ort.

20. Über den Raum.
21. Über die Zeit.
22. Über das Wesen der Zeit.
23. Über die Bewegung.
24. Über das Werden und das Vergehen.
25. Über die Form.
26. Über das Wesen der Form.
27. Über das Geschick.
28. Über das Wesen des Geschicks.
29. Über den Zufall.
30. Über die Natur.

Die zweite Abhandlung. 31 Kapitel.

1. Über die Welt.
2. Über die Gestalt der Welt.
3. Ist die Welt beseelt und durch die Führung geleitet?
4. Ist die Welt unvergänglich?
5. Wovon wird die Welt ernährt?
6. Aus welchem ersten Element begann Gott—erhaben und mächtig ist Er—die Schöpfung der Welt?
7. Über die Anordnung der Welt.
8. Was ist die Ursache, weswegen die Welt sich neigt?
9. Gibt es ausserhalb ein Vakuum?
10. Was ist die rechte und die linke Seite der Welt?
11. Über die Substanz des Himmels.
12. Über die Einteilung des Himmels.
13. Was ist die Substanz der Sterne?
14. Über die Gestalten der Sterne.
15. Über die Anordnung der Sterne.
16. Über die Fortbewegung der Sterne.
17. Woher werden die Sterne erleuchtet?
18. Über das was „Dioskoroi“ genannt wird.
19. Über die (Wetter-) Konstellationen der Jahreszeiten.
20. Über die Substanz der Sonne.
21. Über die Grösse der Sonne.
22. Über die Gestalt der Sonne.
23. Über die Sonnenwende.
24. Über die Sonnenfinsternis.
25. Über die Substanz des Mondes.
26. Über die Grösse des Mondes.

27. Über die Gestalt und die Erleuchtung des Mondes.
28. Über die Mondfinsternis.
29. Über die Erscheinung des Mondes und weshalb ⟨er⟩ erdartig ⟨erscheint⟩.
30. Über die Entfernungen des Mondes.
31. Über die Jahre, wie lange die Zeit jedes einzelnen von den Planeten währt.

Die dritte Abhandlung. 18 Kapitel.

1. Über die lichterfüllte Himmelskugel.
2. Über die beschweiften Sterne.
3. Über den Blitz, den Donner, die Blitzschläge und das, was „Prester“ und „Typhon“ genannt wird.
4. Über die Wolken, Regen, Schnee und Hagel.
5. Über den Regenbogen.
6. Über das, was sich in dem „Ruten“ genannten Licht zeigt.
7. Über die Winde.
8. Über den Winter und den Sommer.
9. Über die Erde.
10. Über die Gestalt der Erde.
11. Über die Position der Erde.
12. Über die Neigung der Erde.
13. Über die Bewegung der Erde.
14. Über die Einteilung der Erde.
15. Über die Erdbeben.
16. Über das Meer, wie sein Zustand ist und auf welche Weise es bitter ist.
17. Wie entstehen Flut und Ebbe?
18. Wie entsteht der Hof um den Mond?

Die vierte Abhandlung. 23 Kapitel.

1. Über die Zunahme des Nils.
2. Was ist die Definition der Seele?
3. Ist die Seele ein Körper und was ist ihr Wesen?
4. Über die Teile der Seele.
5. Über den leitenden Teil unter den Seelenteilen.
6. Über die Bewegung der Seele.
7. Über das Fortleben der Seele.
8. Über die Sinnesempfindungen und die Sinnesobjekte.
9. Sind die Sinnesempfindungen und die Einbildungen wahr?
10. Wieviel Sinne gibt es?
11. Wie werden die Sinnesempfindungen, der Gedanke und die Logik des Denkens?

12. Was ist der Unterschied zwischen der Einbildung und dem Eingebildeten?
13. Wie sieht der Gesichtssinn?
14. Über die Bilder, welche in den Spiegeln gesehen werden.
15. Ist die Finsternis sichtbar?
16. Über das Hören.
17. Über das Riechen.
18. Über den Geschmack.
19. Über den Laut.
20. Ist der Laut ein Körper und wie entsteht das Echo?
21. Wie nimmt die Seele wahr und was ist ihr führender Teil?
22. Über das Atmen.
23. Über die körperlichen Affektionen und ob die Seele sie weiss?

Die fünfte Abhandlung. 30 Kapitel.

1. Über die Wahrsagekunst.
2. Wie entsteht der Traum?
3. Was ist das Wesen des Samens?
4. Ist der Same ein Körper?
5. Wird aus den Weibchen ein Same hervorgeschickt?
6. Wie geschieht die Empfängnis?
7. Wie geschieht die Erzeugung des Männchens und des Weibchens?
8. Wie entstehen die (Geburts-)Geschädigten?
9. Warum wird die Frau trotz häufigen Beischlafs nicht schwanger?
10. Wie entstehen die Zwillinge und die Drillinge?
11. Wie entsteht die Ähnlichkeit mit den Vätern und Vorfahren?
12. Wie werden viele von den Geborenen anderen Leuten ähnlich und nicht ihren Vätern?
13. Wie werden die Frauen unfruchtbar und die Männer steril?
14. Warum sind die Maultiere unfruchtbar?
15. Ist der Embryo ein Lebewesen?
16. Wie ernähren sich die Embrya?
17. Was ist das erste, was im Mutterleib geschaffen wird?
18. Warum (können) die in sieben Monaten Geborenen aufgezogen werden, aber die in acht Monaten (Geborenen) nicht aufgezogen werden?
19. Über Werden und Vergehen der Lebewesen.
20. Über die Arten der Lebewesen, sind sie alle empfindsam und vernünftig?
21. In welcher Zeit werden die Lebewesen gebildet, wenn sie im Mutterleib sind?
22. Aus welchen Elementen besteht jeder der Gattungsteile, die in uns sind?

23. Wie beginnt der Mensch mit der Vollendung?
24. Wie entsteht der Schlaf und bedeutet er einen Tod für die Seele und den Körper?
25. Ist der Schlaf ein Tod für die Seele oder für den Körper?
26. Wie werden die Pflanzen hochgezüchtet und sind sie Lebewesen?
27. Über die Ernährung und das Wachstum.
28. Wie entstehen die Begierden und Freuden in den Lebewesen?
29. Wie entsteht das Fieber und ist es eine Erzeugung?
30. Über die Gesundheit, die Krankheit und das Greisenalter.

Bibliography

We present here the literature that we have consulted and/or referred to in the course of our study. The most important and often recherché primary literature is cited under the name of the editor(s), with cross-references given under the name of the ancient author. Commonly used editions for well-known authors are not cited. References to these editions can be found via the TLG Canon or the Brepols Library of Latin Texts.

For abbreviations used in the text see Sigla and Abbreviations, printed at the beginning of Parts One to Three. See also for Journals and Series the lists of abbreviations in the repertory *L'Année Philologique* and the *SBL Handbook of Style*, 2nd ed. (Atlanta 2014).

Index of Name-Labels and Other Names

This index primarily contains all the name-labels in the *Placita*. It secondarily includes other non-mythical names of persons not functioning as name-labels, indicated in each case with an added asterisk. Ethnicons used to distinguish between homonyms are placed in brackets if not explicitly indicated in the text. For expressions involving 'followers' and 'successors' see the User's Guide to the Translation above in Part 4 under sub-section (3).

A general guide to the subject matter of the doxai is provided for each author. More detailed indications can be gained by combining this index with the tables of contents of the separate books at the beginning of Parts 1–3.

Numbers at the end indicate the sum total of doxai for each name-label (or descriptive category).

Academics *Psychology*: 4.8.13, 4.9.19, 4.13.10

- Philip of Opus *Cosmology*: 2.29.4*
- Philolaus *Introduction*: 1.3.12; *Cosmology*: 2.5.3, 2.5a.4, 2.7.6, 2.20.12, 2.30.1; *Earth and Sea*: 3.11.3, 3.13.2 (8)
- physicists *Foundational Concepts*: 1.18.1; *Cosmology*: 2.6.1 (2)
- Plato *Introduction*: 1.3.20, 1.5.3, 1.7.1*, 1.7.22; *Foundational Concepts*: 1.8.2, 1.9.4, 1.10.2, 1.11.2, 1.12.2, 1.15.4, 1.17.4, 1.18.1, 1.19.1, 1.21.2, 1.22.1, 1.22.9, 1.23.1, 1.25.5, 1.26.3, 1.27.2, 1.27.3*, 1.28.2, 1.29.1; *Cosmology*: 2.1.2, 2.4.9, 2.5.2, 2.5a.1, 2.6.4, 2.6.6, 2.7.4, 2.9.4, 2.10.1, 2.13.12, 2.15.4, 2.15.5*, 2.16.6, 2.17.6, 2.19.1, 2.20.7, 2.23.8, 2.25.7, 2.29.7; *Meteorology*: 3.5.2*; *Earth and Sea*: 3.15.10, 3.17.5; *Psychology*: 4.2.5, 4.4.1, 4.5.1, 4.6.1, 4.7.1, 4.7.5, 4.7a.1, 4.8.3, 4.9.1, 4.9.11, 4.13.7, 4.19.1, 4.20.1; *Physiology*: 5.1.1, 5.3.4, 5.4.2, 5.15.1, 5.20.1, 5.20.4, 5.26.1 (61)
- Plato and followers/successors *Introduction*: 1.2.1; *Psychology*: 4.16.4 (2)
- Plato, successors of *Earth and Sea*: 3.16.6 (1)
- Polemon *Introduction*: 1.7.20 (1)
- Polybus *Physiology*: 5.18.3, 5.18.5 (2)
- Polycrates *Introduction*: 1.3.8*
- Posidonius *Introduction*: 1.7.10; *Foundational Concepts*: 1.28.5; *Cosmology*: 2.9.3, 2.25.5; *Earth and Sea*: 3.1.11, 3.17.4; *Psychology*: 4.13.11 (7)
- Protagoras *Psychology*: 4.9.1 (1)
- Pythagoras *Introduction*: 1.3.7, 1.3.8*, 1.7.9; *Foundational Concepts*: 1.8.2, 1.10.3, 1.11.3, 1.21.1, 1.23.1, 1.24.3, 1.25.2; *Cosmology*: 2.1.1, 2.1.2, 2.4.1, 2.6.2, 2.6.5, 2.10.1, 2.12.1, 2.12.2, 2.23.8, 2.25.15, 2.28.6, 2.32.6; *Earth and Sea*: 3.14.1; *Psychology*: 4.2.3, 4.4.1, 4.5.14, 4.7.1, 4.7.5, 4.7a.1, 4.9.1, 4.9.11, 4.13.6, 4.20.1; *Physiology*: 5.1.3, 5.3.2, 5.4.2, 5.5.1, 5.20.4 (37)
- Pythagoras and followers *Foundational Concepts*: 1.14.2 (1)
- Pythagoras and successors *Cosmology*: 2.9.1, 2.12.1 (1)
- Pythagoras, successors of *Foundational Concepts*: 1.9.2, 1.15.7, 1.16.1; *Meteorology*: 3.2.1–2; *Psychology*: 4.4.6, 4.14.3 (7)
- Pythagoreans *Foundational Concepts*: 1.15.2; *Cosmology*: 2.13.15, 2.22.3, 2.24.2, 2.29.4, 2.30.1; *Meteorology*: 3.1.2–3 (8)
- Pytheas *Earth and Sea*: 3.17.3 (1)
- Seleucus *Cosmology*: 2.1.7; *Earth and Sea*: 3.17.9 (2)
- Socrates *Introduction*: 1.3.20, 1.7.22; *Foundational Concepts*: 1.10.2 (3)
- Speusippus *Introduction*: 1.7.11 (1)
- Sphaerus *Psychology*: 4.15.1 (1)
- Stoics *Introduction*: 1.proem. 2, 1.5.1, 1.6.1, 1.7.24; *Foundational Concepts*: 1.8.2, 1.9.2, 1.9.8, 1.10.5, 1.11.5, 1.11.7, 1.12.4, 1.14.5*, 1.22.2, 1.27.3, 1.28.4, 1.29.4; *Cosmology*: 2.1.9, 2.2.1, 2.4.2, 2.4.8, 2.6.1, 2.9.2, 2.14.1, 2.15.2, 2.17.4, 2.22.3, 2.23.6, 2.25.5, 2.26.1, 2.27.1, 2.28.3, 2.29.7, 2.30.6; *Meteorology*: 3.1.10, 3.3.15, 3.7.2, 3.8.1; *Earth and Sea*: 3.9.3, 3.10.1, 3.15.2; *Psychology*: 4.3.3, 4.4.4, 4.5.7, 4.7.3, 4.8.1, 4.8.7, 4.8.8, 4.8.12, 4.9.4, 4.9.18, 4.10.1, 4.11.1, 4.19.6, 4.20.2, 4.21.1, 4.23.1; *Physiology*: 5.1.1, 5.9.2, 5.10.4, 5.11.3, 5.12.3, 5.13.3, 5.15.2, 5.16.2, 5.17.1, 5.23.1, 5.24.4, 5.26.3, 5.30.5 (68)
- Strato *Introduction*: 1.3.24; *Foundational Concepts*: 1.12.7, 1.15.5*, 1.18.4, 1.19.3, 1.22.5; *Cosmology*: 2.11.4, 2.17.2; *Meteorology*: 3.2.5, 3.3.14; *Psychology*: 4.5.3, 4.13.3, 4.23.3; *Physiology*: 5.2.2, 5.4.3, 5.8.2, 5.24.4 (16)
- Thales *Introduction*: 1.2.2, 1.3.1, 1.3.6*, 1.7.2; *Foundational Concepts*: 1.8.2, 1.11.6, 1.18.1, 1.25.1, 2.1.2, 2.12.1, 2.13.1, 2.20.9, 2.24.1, 2.25.9, 2.28.5, 2.29.7;

- Earth and Sea*: 3.10.1, 3.15.1; *Nile*: 4.1.1; *Psychology*: 4.2.1; *Physiology*: 5.26.1 (20)
- Thales and his followers/successors *Foundational Concepts*: 1.17.1; *Earth and Sea*: 3.9.1 (2)
- Thales, successors of *Foundational Concepts*: 1.9.2, 1.11.6, 1.16.1; *Earth and Sea*: 3.11.1 (4)
- Theodore of Cyrene *Introduction*: 1.7.1*
- Theophrastus *Introduction*: 1.proem. 3, *Cosmology*: 2.20.5*, 2.29.8* (1)
- Things without parts, those who posit *Foundational Concepts*: 1.9.7; *Psychology*: 4.9.10 (2)
- Timaeus *Earth and Sea*: 3.17.6; *Physiology*: 5.18.2 (2)
- Timagoras *Psychology*: 4.13.2 (1)
- Xenarchus *Psychology*: 4.3.10 (1)
- Xenocrates *Introduction*: 1.3.22, 1.7.21; *Foundational Concepts*: 1.13.3, 1.17.3, 1.22.3; *Cosmology*: 2.15.1; *Psychology*: 4.2.4, 4.4.2, 4.7.1, 4.7a.1 (10)
- Xenophanes *Introduction*: 1.3.11; *Cosmology*: 2.1.3, 2.4.5, 2.13.14, 2.18.1, 2.20.2, 2.20.5, 2.24.5, 2.24.8, 2.25.3, 2.28.1, 2.29.6, 2.30.9; *Meteorology*: 3.2.12, 3.3.6, 3.4.4; *Earth and Sea*: 3.9.4, 3.11.2; *Psychology*: 4.9.1; *Physiology*: 5.1.2 (20)
- Zeno (the Eleatic) *Introduction*: 1.7.18, 1.24.1; *Psychology*: 4.9.1 (2)
- Zeno the Stoic *Introduction*: 1.3.23, 1.7.14; *Foundational Concepts*: 1.9.8*, 1.15.6, 1.27.5; *Cosmology*: 2.1.2, 2.11.4; *Psychology*: 4.21.1, 5.4.1; *Physiology*: 5.5.2 (9)
- Zeno and his successors *Foundational Concepts*: 1.18.5, 1.20.1 (2)
- Zeno, the successors of *Foundational Concepts*: 1.10.5 (1)
- †pelles *Psychology*: 4.10.3 (1)

Index of Fragment Collections and Extant Sources

This index lists the references to fragment collections and extant writings contained in the first apparatus to the text of the Compendium. For full details of editions referred to see the Bibliography elsewhere in Part 4.

Alcmaeon, ed. Diels–Kranz

24A4	2.16.2, 2.22.1, 2.29.3

Index of Ancient and Modern Names

This selective index lists the more important references to ancient writers and modern scholars as cited and discussed in the General Introduction and Commentary. Excluded are references which are covered by the other indices, namely: (1) primary and secondary witnesses to Aëtius' compendium (see index 1); and (2) ancient thinkers whose names and views appear in the Aëtian text (see index 2). An exception to the second excluded group are ancient writers who, apart from being holders of philosophical views, also played a significant role in their transmission. So, for example, Aristotle is not indexed for his doxai and philosophical doctrines, but for the role he played in developing the method of the *Placita* and as a source for the structure and contents of its books and chapters.

Note further the following: (1) page references may also refer to footnotes on those pages (in the General Introduction only); (2) page numbers separated by a dash may indicate references on separate pages, not necessarily a continuous discussion; (3) index entries referring to ancient authors in sections B and E of the Commentary, i.e. relating to proximate traditions and the sources, should be further pursued throughout the entire chapter in question (this does not apply to very long chapters such as *Plac.* 1.3 and 1.7); (4) in order to facilitate consultation, lists of references longer than about 15 items are divided into sections corresponding to the main divisions of the edition, i.e. the General Introduction (abbreviated G.I.) and the five Books (abbreviated Bk.).
